HOMEFRONT SUITE

HomeFront is an ERP system with integration between applications within the suite. The applications that complete the HomeFront suite are:

- **Precision Builder:** Estimating/Purchasing and Cost Management
- **Profit Builder:** Lot Inventory Management
- **Payables Desk:** Invoice Management
- **HomeFront Sales:** Sales and Inventory Home Management

(Current Accounting Systems to integrate with HomeFront: Sage Intacct, Sage 300, Sage 100, Sage 50, and QuickBooks)

Mandatory and Best Practice	Δ	N/A

2.0 PRECISION OVERVIEW

Precision Builder was designed to assist builders to manage estimates, purchasing processes and retail sales pricing operations. This User Guide will assist in using Precision Builder to effectively manage estimating and purchasing processes. For Precision Builder to achieve its intended purpose, as with any other integrating system, there are some underlying business processes that guide its functions. These business processes were derived from industry best practices and standards.

2.1 Precision Summary and Prerequisites

Within Precision is the Item Database, which is a library of all the components or materials used in the creation of Assemblies, Job budgets, and Job purchase orders. The Item Database is central to all things in Precision Builder.

2.1.1 Server and Accounting Set Up Prerequisites

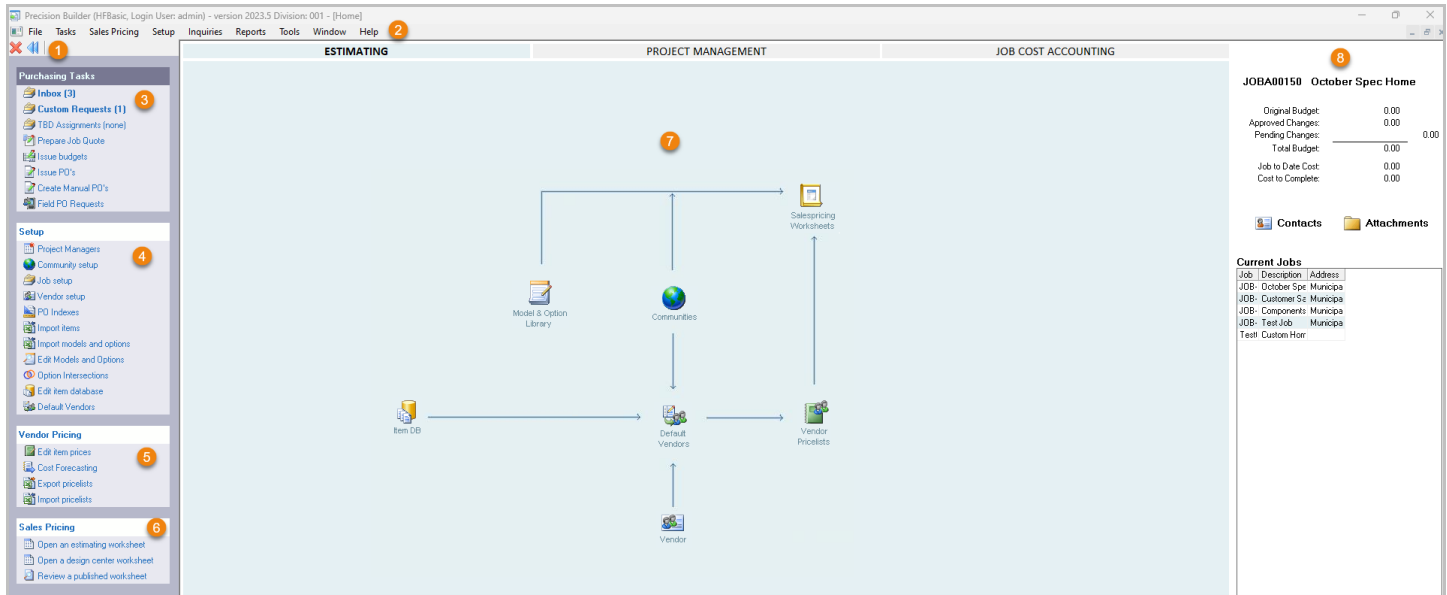

- Hosting Environment created with access for Hyphen Implementation and Support teams.
- Accounting System Set with Cost Codes, Categories and Vendors to allow for integration with HomeFront.

2.1.2 Implementation Data Requirements

- Create list of Estimating Items (Item Database)
- List of Models, Plans, and Options
- PO Index list (Pay Points)
- List of Communities
- Lot Inventory

2.2 Precision Builder Workspace

The figure below shows the workflow view when logging into Precision Builder as well as the Task Panel on the left. If the Precision screen is blank, the workflow will need to be selected to show, which can be done by pressing F6 on your keyboard or using the top “window” menu followed by “show workflow”. Additionally, the Task Panel can be shown either by pressing F2 on your keyboard or using the top “window” menu followed by “show task panel”. Each section of the the log in screen has been labeled and explained below:

1. ICONS

Icon	Function
	Use this icon to close workflow window
	Use the large red X in the upper left corner to close the Task Panel
	Use the left/right directional arrows in the upper left corner to either hide or show the Task Panel

2. FILE MENU	
Menu Item	Function
File	Use menu to save all documents, Close or Change Divisions in Precision Builder
Tasks	Inbox: contains Inventory Homes and completed sales contracts and/or builder approved change orders that come from Profit Builder/HFS. These items are used to bring those assemblies into Issue Budgets/Issue PO's to be processed by Estimating
	Custom Request: contains a list of custom requests sent from Profit Builder/HFS. Estimating can apply takeoffs, sales pricing, and approve/decline the option requests
	Issue Budgets: create or edit job budget details
	Issue PO: create or edit Purchase Orders
	Create Manual PO's: create individual manual Purchase Orders
	Field PO Requests: FSM Users only. Field POs created in the portal can be reviewed/approved.
	Send purchase orders: send Purchase Orders to Vendors **Can be used when integrated to BP but doesn't send to BP**
	Post AR Estimates
	Edit item prices: open the Vendor price list screen to edit vendor price list information
	Cost Forecasting: open cost forecasting dialog used to calculate vendor price forecasts which can be used for sales pricing purposes
Sales Pricing	Open an estimating worksheet: open estimating worksheet
	Open design center worksheet: open design center worksheet
	Review published worksheet: review published worksheets
Set Up	Job Cost Codes: view Job Cost Codes
	Job Cost Category: view Job Cost Categories
	Rooms: set Up menu for the Room Dimensions feature. (Not equal to room "locations")
	Dimension Categories: set Up menu for Rooms feature (Dimension categories)
	Model Dimensions: set Up menu for Rooms feature (Model Room take offs)
	Community Setup: create or view a community (area, subdivision etc.)
	Community Phases Setup: create or view a community phase
	Project Managers: setup managers that have different access rights in the system. Not related to BuildPro. Only used with Project Builder/FSM Portal.
	Vendor Setup: open or access vendor records within Precision Builder
	Customer Setup: view, edit, and create customers in Customer List (AR Sage 300 only)
	Job Setup: view, edit, and create Jobs in a Job List. BP Templates and Start Dates can be entered here.
	PO Indexes: view, create, and edit Purchase Order Indexes.
	Default Vendors: assign default vendors for each PO Index
	Edit item database: access and edit item database
	Edit Model and Options: access and edit model option library

Inquiries	PO Details: view all PO details
	PO List: view PO List
	Manage: manage PO details and PO list database
Reports	Reports: view reports
	Manage: manage reports. Opens the Precision report folder on the server.
Tools	Cancel Purchase Order Wizard: cancel POs within a job
	Purchase Order Price Update Wizard: Updates prices on generated PO's
	Mass Change Wizard: update, add, substitute, or remove items within assemblies
	Duplicate Model Options: copy options model to model
	Assign TBD Purchase Orders: change a TBD to a vendor
	Work Reassignment Wizard: reassign incomplete work to a different vendor
	Reset Default Vendors: Reset defaults within a job
	Reset Grid Layouts to default: resets column header name and layout to default
	Import items: used to import items into assemblies (template required)
	Import models and options: import models and options into library (template required)
	Import pricelists: import vendor item prices into the vendor pricelist
	Export pricelists: export price lists from the vendor pricelist
	User Permissions: manage user access rights
	Database Synchronization: import Account Receivable, Job Cost, Vendors and Tax Settings from the accounting system
	System Settings: configure initial settings of Precision Builder
	Additional Tools: access links to additional tools such as the calculator
Window	Show Task Panel: show and hide Task Panel
	Show Workflow: show or hide Workflow windows. Other open windows are displayed in this menu and can be used to switch between open windows
Help	N/A – Please contact your Hyphen consultant for a current user guide

3. TASK PANEL/PURCHASING TASK MENU

Menu Item	Function
Inbox	Contains Inventory Homes and completed sales contracts and/or builder approved change orders that come from Profit Builder/HFS. These items are used to bring those assemblies into Issue Budgets/Issue PO's to be processed by Estimating
Custom Request	contains a list of custom requests sent from Profit Builder/HFS. Estimating can apply takeoffs, sales pricing, and approve/decline the option requests
Prepare Job Quote	prepare job specific quotes
Issue Budgets	create and generate a budget
Issue PO's	create, generate, and issue Purchase Orders
Create Manual PO's	create individual manual Purchase Orders
Field PO Requests	FSM Users only. Field POs created in the portal can be reviewed/approved.
Send Purchase Orders	send Purchase Orders to Vendors **Can be used when integrated to BP but doesn't send to BP**

4. TASK PANEL/SET UP MENU

Menu Item	Function
Project Managers	Set up managers that have different access rights in the system. Not related to BuildPro. Only used with Project Builder/FSM Portal
Community Set Up	create or view a community (area, subdivision etc.)
Job Set Up	view, edit, and create Jobs in a Job List. BP Templates and Start Dates can be entered here.
Vendor Set Up	access vendor records within Precision Builder
PO Indexes	view, create, and edit PO Indexes.
Import Items	import items into assemblies (template required)
Import Models and Options	import models and options into the library (template required)
Edit Models and Options	access and edit model/option assemblies in Precision Builder
Option Intersections	Create and apply Intersecting Options
Edit Item Database	access and edit items in Precision Builder
Default Vendors	assign default vendors for each PO Index

5. TASK PANEL/VENDOR PRICING MENU

Menu Item	Function
Edit Item Prices	edit item prices
Cost forecasting	set the forecast for the different items
Export Pricelists	export price lists from the vendor pricelist
Import Pricelists	import vendor item prices into the vendor pricelist

6. TASK PANEL/SALES PRICING MENU

Menu Item	Function
Open an estimating worksheet	access and edit different sales worksheets that have been created in Precision Builder
Open a design center worksheet	access and edit different design center worksheets that have been created in Precision Builder
Review a published worksheet	review published worksheets

7. WORKFLOW WINDOW

Tab	Function
Estimating	access quick links to the assembly library and item database
Project Management	access quick links to key feature to the estimating process for custom and commercial builder
Job Cost Accounting	access quick links to the cost process

8. WORKFLOW/ACTIVITY PANEL

Item	Function
Current Job Info	Displays information about the most recently opened Job
Contacts	Access Job related contacts
Attachments	Job related Documents - **Not for use with BuildPro**
Open Projects	Displays Project that have been open recently

2.3 Modifying Grids and Line Items

Grids are widely used in Precision Builder. They appear in many interfaces of Precision Builder; examples are listed below:

- Item Database window
- Model and Option Library
- Issue Budget window
- Issue PO's window
- Estimating worksheets

Phase	PD Index	Item Number	Description	Takeoff Qty	Takeoff UOM	Price	Total	Item Type	Price Level	Vendor Name	Cost Code	Category
33100	NoPO20 N0PO - Site - Do Not Generate a PO	0010	Portable Toilet	1	EA	1	1.00	Unit Price	Global (any Community)	SAMPLE Vendor	33000	SUB
33100	NoPO20 N0PO - Site - Do Not Generate a PO	0020	Portable Toilet - M	1	EA	1	1.00	Unit Price	Global (any Community)	SAMPLE Vendor	33000	SUB
34100	Survey10 Survey - Plot Plan	0010	Survey - Plot Plan	1	EA	1	1.00	Unit Price	Global (any Community)	SAMPLE Vendor	34000	SUB
34100	Survey20 Survey - Rough Grade	0020	Survey - Rough Grade	1	EA	1	1.00	Unit Price	Global (any Community)	SAMPLE Vendor	34000	SUB
34100	Survey30 Survey - Stake House Box	0030	Survey - Stake House Box	1	EA	1	1.00	Unit Price	Global (any Community)	SAMPLE Vendor	34000	SUB
34100	Survey40 Survey - Stake for Footing	0040	Survey - Stake for Footing	1	EA	1	1.00	Unit Price	Global (any Community)	SAMPLE Vendor	34000	SUB
34100	Survey50 Survey - Brick Points	0050	Survey - Brick Points	1	EA	1	1.00	Unit Price	Global (any Community)	SAMPLE Vendor	34000	SUB
34100	Survey60 Survey - As-Built Survey	0060	Survey - As-Built Survey	1	EA	1	1.00	Unit Price	Global (any Community)	SAMPLE Vendor	34000	SUB

1. Column Header
2. Line Item

Note: When a window is closed within Precision the current grid layout will be saved to user file. If there are multiple instances of the same window open, the last window to be closed will be saved.

Deleting Records and Line Items

Highlight the rows that contain the information to be deleted, press the CTRL+ DELETE or right click and select remove items.

Changing values on line items

Highlight the cell of the desired line item.

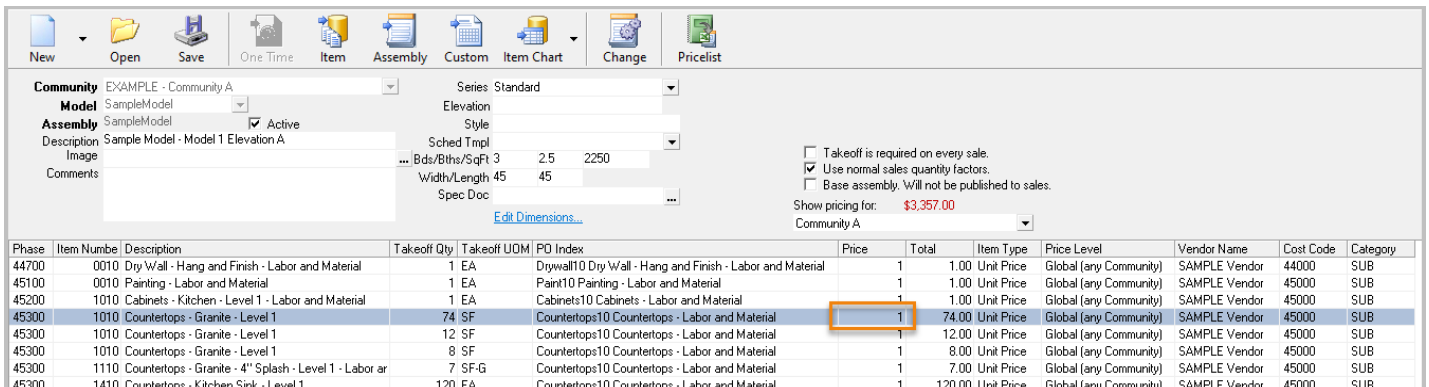

or

Type in the new value on the cell and click Save button to save.

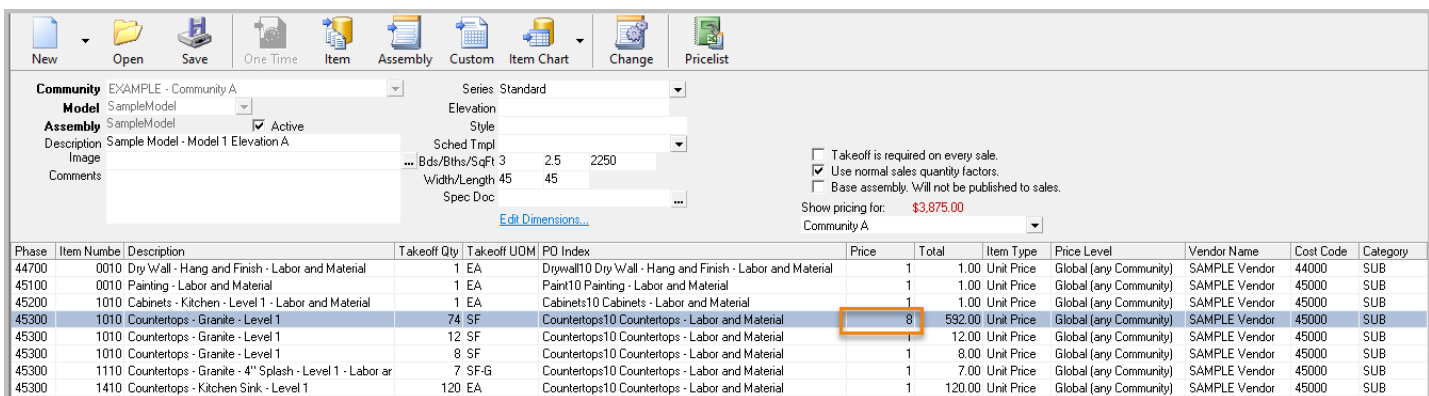

Note: This action will not work if the line-item font appears light gray, indicating that they are not editable. This happens after Budgets or POs have been generated in job records.

The figure below shows an example of a Price being changed for a line item:

Assigning the same value to multiple rows

If the same value is to be assigned to multiple consecutive rows:

1. Highlight the cells to be changed by left clicking and dragging the mouse cursor downwards, starting from the highest cell in the column or using shift + left click to select a section of line items.
2. With the cells highlighted, if a pick list is available click the button as shown below or press the space bar to display the pick list. Selecting the desired item from the list will assign the same value to all highlighted cells.
3. If no pick list is available; with the cells highlighted, type in the value to insert and press the enter key on the keyboard. View the figure below for example.
4. Click the **Save** button to save.

To Insert a column

Right Click on any column header and choose “Insert a column” from the pop-up menu.

The screenshot shows the Hyphen Homefront software interface. At the top, there is a toolbar with icons for New, Open, Save, One Time, Item, Assembly, Custom, Item Chart, Change, and Pricelist. Below the toolbar, there are several input fields for Community, Model, Assembly, Description, Image, and Comments. To the right of these fields, there are dropdown menus for Series, Elevation, Style, and Sched Tmpl. Below these, there are input fields for Bds/Bths/SqFt, Width/Length, and Spec Doc. A checkbox for 'Active' is also present. On the right side, there are checkboxes for 'Takeoff is required on every sale', 'Use normal sales quantity factors', and 'Base assembly. Will not be published to sales'. A 'Show pricing for' dropdown is set to 'Community A' with a value of '\$3,875.00'. Below these fields is a table with columns: Phase, Item Number, Description, Takeoff Qty, Takeoff UOM, PO Index, Price, and Vendor Name. A right-click context menu is open over the 'PO Index' column header, showing options: Group on this column, Expand All, Collapse All, Hide this column, Insert a column (highlighted), Rename this column..., Print..., and Save As....

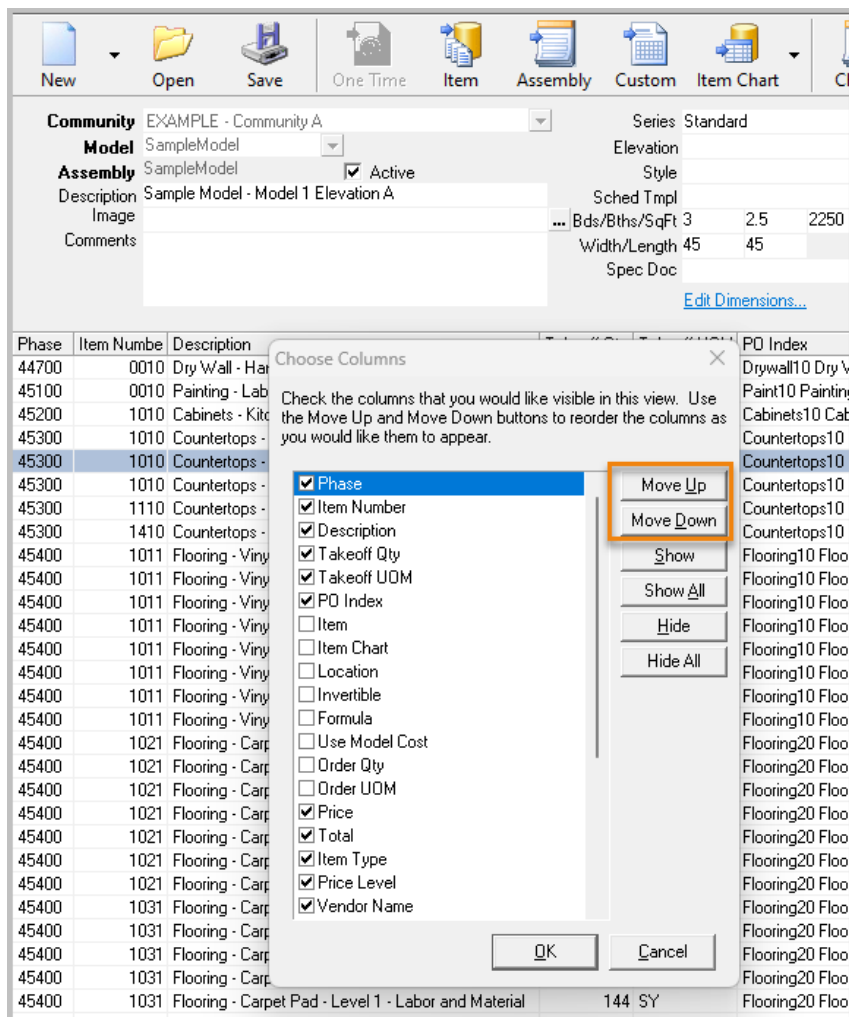

From the sub menu, choose the new column to insert by either checking the box next to the column header or using the “Show” button.

The screenshot shows the Hyphen Homefront software interface with the 'Choose Columns' dialog box open. The dialog box has a title bar 'Choose Columns' and a close button. It contains a list of columns with checkboxes next to them. The columns are: Phase, Item Number, Description, Takeoff Qty, Takeoff UOM, PO Index, Item, Location, Invertible, Formula, Use Model Cost, Order Qty, Order UOM, Price, Total, Item Type, Price Level, and Vendor Name. The 'PO Index' column is highlighted. To the right of the list, there are buttons: Move Up, Move Down, Show (highlighted), Show All, Hide, and Hide All. At the bottom of the dialog box, there are 'OK' and 'Cancel' buttons. The background shows the same software interface as the previous screenshot, but the 'Choose Columns' dialog box is in the foreground.

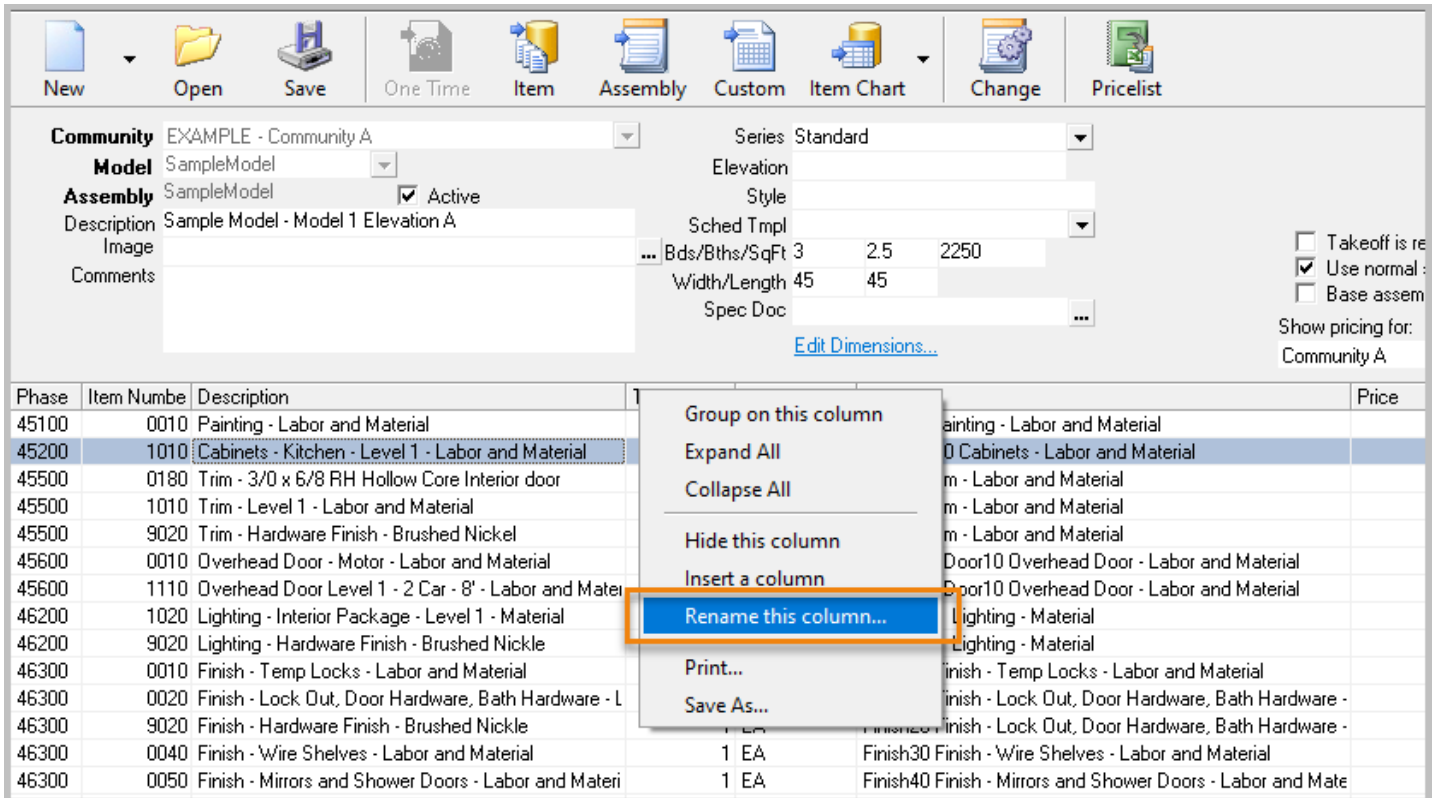

To Move a column

Left click on the column header to be moved and drag it, left or right, to the new destination. Columns can also be sorted inside the below menu.

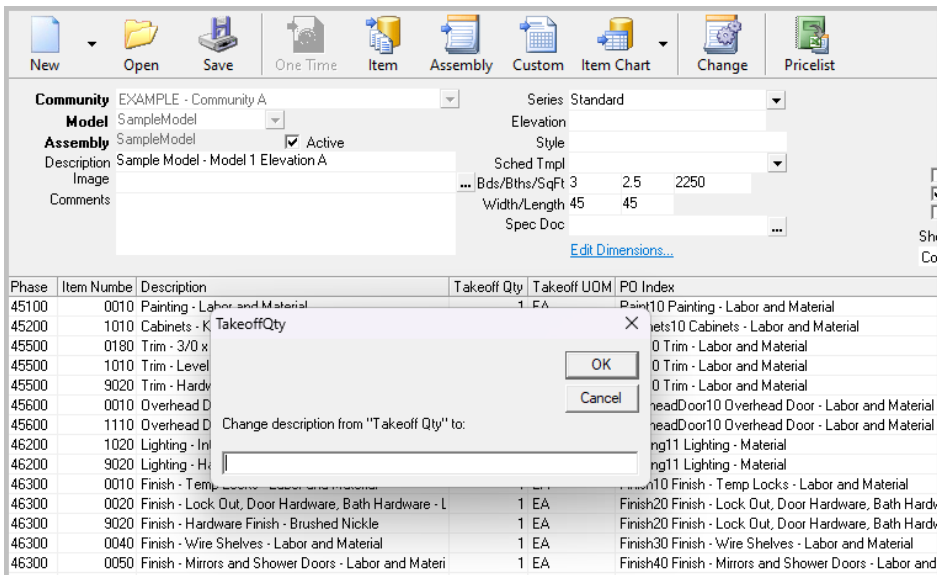

To Rename Column

Right-click on a column header, selection menu opens. Select Rename this column. A dialog will open.

The screenshot shows the Hyphen HomeFront software interface. At the top, there is a toolbar with icons for New, Open, Save, One Time, Item, Assembly, Custom, Item Chart, Change, and Pricelist. Below the toolbar, there is a form for entering project details, including Community, Model, Assembly, Description, Image, and Comments. To the right of the form, there are fields for Series, Elevation, Style, Sched Tmpl, Bds/Bths/SqFt, Width/Length, and Spec Doc. A right-click context menu is open over the 'Description' column header of the main table. The menu options are: Group on this column, Expand All, Collapse All, Hide this column, Insert a column, Rename this column... (highlighted with a red rectangle), Print..., and Save As....

46300	0050	Finish - Mirrors and Shower Doors - Labor and Material	1	EA	Finish40 Finish - Mirrors and Shower Doors - Labor and Material

Type the new name of the column and click OK.

 **Renaming a column header only applies to individual user views and can create viewing discrepancies.**

To Sort data in Columns

Left click the column header that is to be sorted. An arrow will appear on the column header, indicating the direction of the sort order. View the figure below for example:

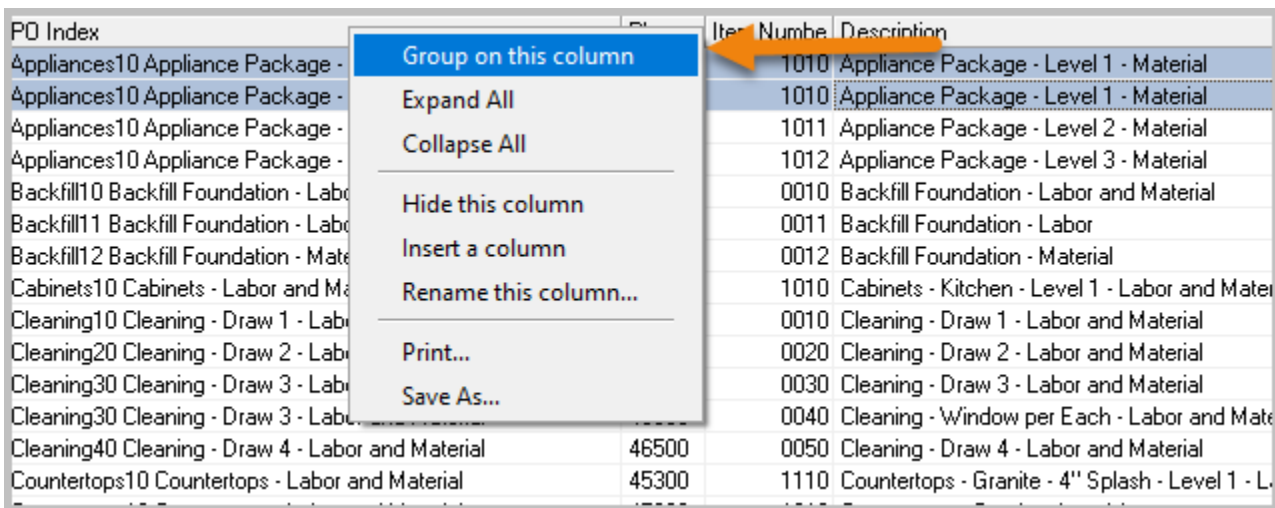

The screenshot shows the Hyphen Homefront software interface. At the top, there is a toolbar with icons for New, Open, Save, One Time, Item, Assembly, Custom, Item Chart, Change, and Pricelist. Below the toolbar, there are several dropdown menus and input fields for configuring the data view, including Community, Model, Assembly, and various dimensions. A table is displayed at the bottom with columns for Phase, Item Number, Description, Takeoff Qty, Takeoff UOM, PO Index, Price, Total, Item Type, Price Level, Vendor Name, Cost Code, and Category. The 'Description' column header is highlighted with an orange box, indicating it is the target for sorting.

Grouping line items based on specific Column

Right-click on a column header, selection menu opens.

Select **Group on this column**. The items will be grouped according to the column selected. View the figure below for example:

The screenshot shows the Hyphen Homefront software interface with a context menu open over the 'Description' column header. The menu options are: Group on this column (highlighted with an orange arrow), Expand All, Collapse All, Hide this column, Insert a column, Rename this column..., Print..., and Save As... The table below shows the data rows, which are grouped by the 'Description' column.

PO Index	Item Number	Description
Appliances10	1010	Appliance Package - Level 1 - Material
Appliances10	1010	Appliance Package - Level 1 - Material
Appliances10	1011	Appliance Package - Level 2 - Material
Appliances10	1012	Appliance Package - Level 3 - Material

OPTION MAJOR GROUP DESCRIPTION	Maximum of 50 characters alpha-numeric
OPTION CATEGORY ID	Maximum of 15 characters alpha-numeric
OPTION CATEGORY DESCRIPTION	Maximum of 50 characters alpha-numeric
MODEL/OPTION COMMENTS	Maximum of 4000 characters alpha-numeric
MODEL STYLE	Maximum of 500 characters alpha-numeric

3.0 SYSTEM SET UP MENUS

Tools/System Settings

The **System Settings** menu consists of sub menus that can be configured. These settings impact how the software will operate, as certain links and features will be activated (or hidden) based on the settings chosen. View the sub menu below:

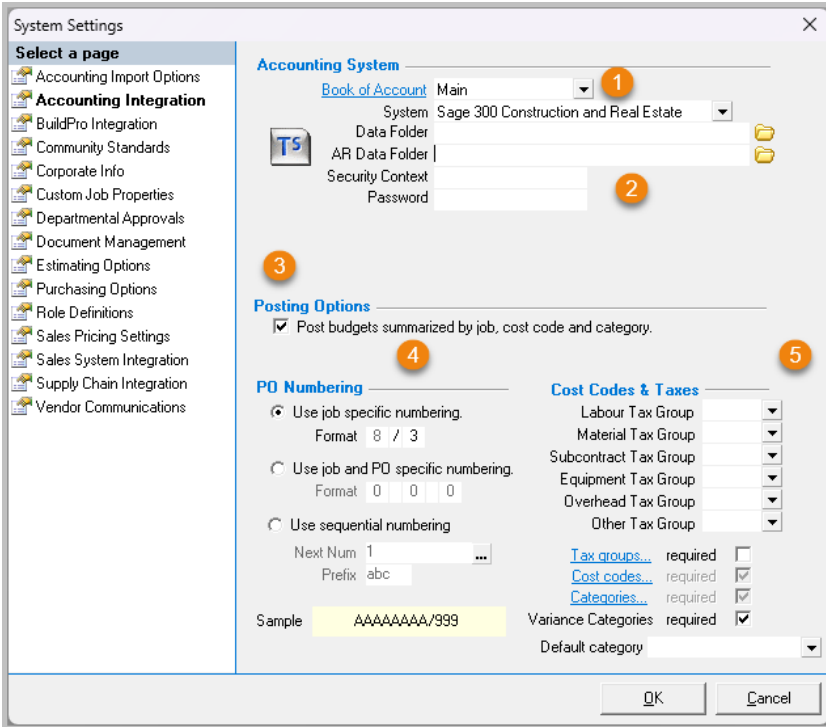

3.1 Accounting Import Options:

This menu allows accountants to manage the vendor activity via integration or a Precision User. If integrated with an accounting system, it is best practice to let accounting manage the vendors.

3.2 Accounting Integration:

This menu allows Precision Builder to integrate to an accounting system.

Precision Builder can integrate with several accounting platforms. Some examples are Sage Intacct, Sage 300, Sage 100, Sage 50, and QuickBooks.

The **Accounting Integration** view has four distinct sections:

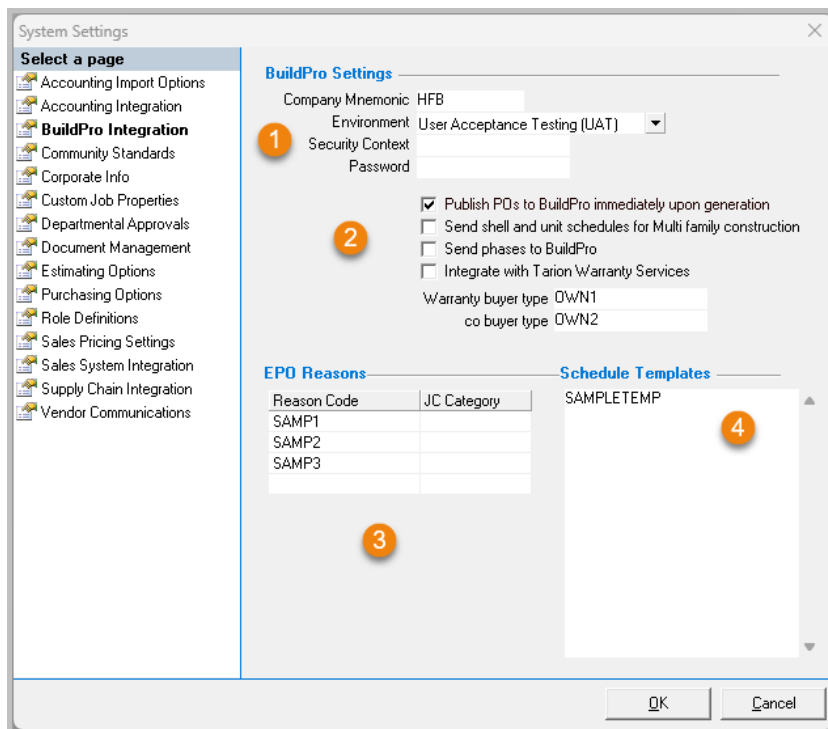

1. **Book of Account:** Accounts for different Wallet Bank Accounts within the company. There must be a book of account for each individual Wallet account. Note: A Book of Account must be entered for the Wallet menu to populate.
2. **Accounting System:** Selection and integration data path.
Posting Preferences: Specifies the Posting Preference for the budget as well as for the purchase order. (Accounting platform dependent)
3. **Posting Options:** Specifies how the job budget will post to the accounting platform
4. **PO Numbering:** Specifies Purchase Order numbering formats.
 - **Job specific numbering:** for those users that want the job number to be included as part of the purchase order number. The format specifies the number of digits to be used for the job number portion followed by the number of digits that specify the number of PO's that can be issued on a single job. (Note: Purchase order numbers can be alpha-numeric values and maximum length is accounting platform dependent)
 - **Job and PO Specific numbering:** additional format for po numbering
 - **Sequential numbering:** Applies to those users that do not wish to have the job number as part of the purchase order numbers. Purchase orders will be sequentially numbered. An alpha numeric prefix can also be specified that will precede the number and be used to form the complete PO number.

5. **Cost Codes & Taxes:** Specifies whether sales tax groups are required. Tax Groups are created in the accounting software and then read into HomeFront upon database synchronizations. A tax group can be specified as a global default by cost type or assigned to other fields within the look up hierarchy. Below is the Tax Group hierarchy lookup that HomeFront uses, listed from most specific:
 - Vendor Price
 - Item Database
 - Vendor
 - Job
 - Community
 - System Defaults (Accounting Integration Menu)

 *The view and menu of the accounting integration will change pending the accounting software chosen. Contact Hyphen Support to request an accounting integration guide.*

3.3 BuildPro Integration

The BuildPro Integration screen contains the four main components required for data transfers and schedule information.

1. Build Pro Settings:
 - **Company Mnemonic** - Client specific. This will be entered during implementation and CANNOT be changed once entered and mapped to BuildPro.
 - **Environment:** Determines whether data will be integrated with the test (UAT) BuildPro environment or the Live (Production) BuildPro environment.

- **Security Context and Password:** Provided by Hyphen upon BuildPro implementation; UAT & Production BuildPro environments have different credentials and must be obtained from Support@ihyphen.com.
- 2. **Other Settings:**
 - **Publish PO's to BuildPro immediately upon generation:** Sends all BuildPro enabled POs upon generation; will also send the job record with the PO.
 - **Send shell and unit schedule templates for Multi Family Construction:** Creates separate jobs in BuildPro for the Shell and Units using the schedule templates entered on the job. Only for use with Multi Family settings. This is a division specific setting and may require an additional division.
 - **Send phases to BuildPro:** Creates a separate organization (community) in BuildPro for each phase of a community.
 - **Integrate with Tarion Warranty Services:** Properties box in Precision will add fields for Builder and Job Enrollment Number.
 - **Warranty buyer type:** Sends the primary buyer contact information to BuildPro Warranty. Enter the user defined Homeowner code from BuildPro. These codes need to be mirrored in the BuildPro Warranty set up.
- 3. **EPO Reasons:** Allocates the user defined BuildPro Reason Codes to the desired Job Cost Category for variance reporting. These reason codes need to be mirrored in the BuildPro EPO set up.
- 4. **Schedule Templates:** Enter the user defined BuildPro Schedule Template codes in this field, which will populate as a list available to be assigned to jobs in Precision. Schedule Templates are required for a job to integrate with BuildPro. These codes are found in the Template Details page of your Schedule Template in BP.

*For detailed BuildPro integration instructions please see the **HOMEFRONT BUILDPRO INTEGRATION GUIDE**.*

3.4 Corporate Info

Within the Corporate Info menu, basic company information is set up as well as **Division** labels.

To Enter a New **Division**:

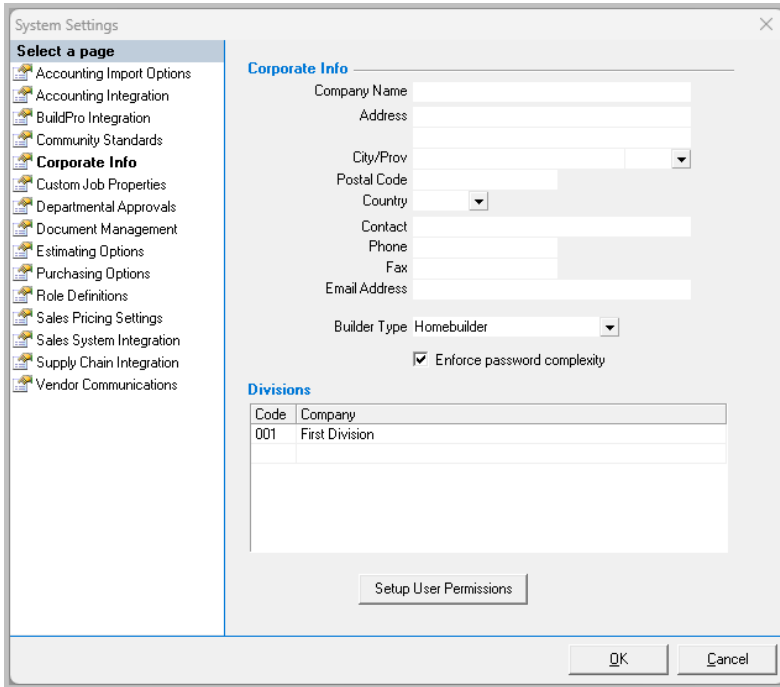

- Click on the first available empty row and enter a Code (Abbreviation) for the division. (3 numerical digits for BP integration)
- Add an extended description for the Division in the Company column.

****IMPORTANT NOTE:** See section "4.0 Creating a new Division" before the division is created. **

NOTE: Within the SQL database, HomeFront will assign a numerical Division ID (not viewable to the users) to the divisions that are entered (will start at 1 and increase by +1). This is important to note, as many reports that are run will require a specific Division ID to be entered. Use the internal number as opposed to the Code that is entered as shown below.

Custom fields can be organized into categories for easier organizing data. This information can then be included in purchase orders in the specified categories. All custom fields are created as fields in a database table called Job Custom Fields. This allows for easier reporting. The screenshot below shows where the custom fields will appear on the **Job Setup** window. ****Not available with BP integration****

3.6 Estimating Options

If Sage Estimating is used, this menu will specify which database to connect with. A different estimating database for each community can be specified here as well.

View the following figure for example:

Incentive Cost Q: Is used during the sales pricing process for those users that wish to have the system automatically generate a budget line for incentives and are added to their model price lists. The budget line is a percentage of the retail value of the incentive, and the default percentage value for this calculation is stored in this field. If this feature is not utilized, leave the Incentive Cost at 0.00.

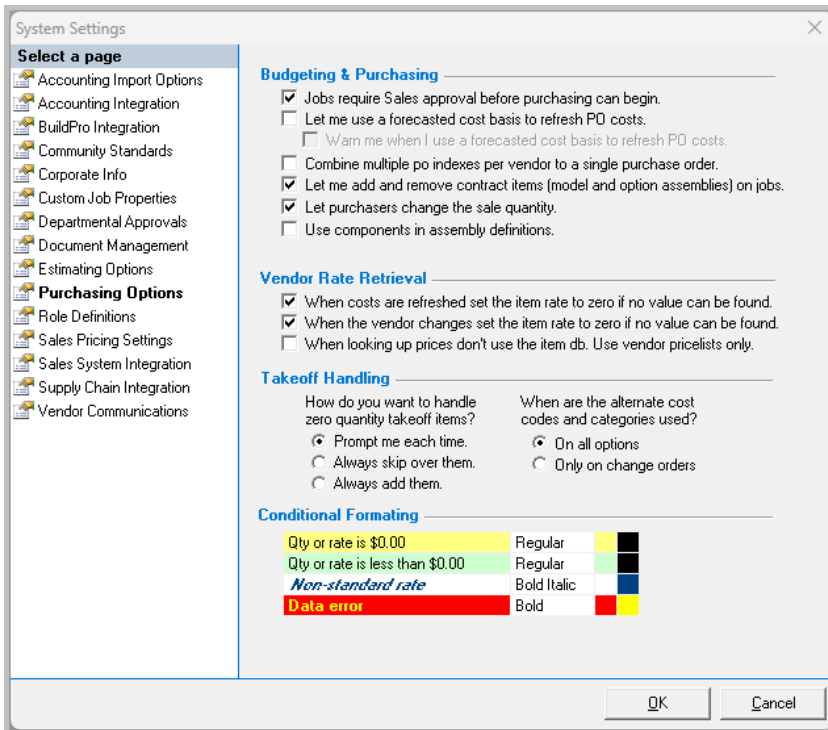

Sales Incentives Q: Is used during the sales pricing process for those users that wish to have the system automatically generate a budget line for sales incentives and are added to their model price lists. The budget line is a percentage of the retail value of the incentive, and the default percentage value for this calculation is stored in this field. If this feature is not utilized, leave the Sales Incentive at 0.00.

Land Costs: Refers to the item number that is used when inserting a budget line on a job for a model that includes a land cost, which is specified on the sales price worksheet. The value inserted will be the land cost value that was included on the sales worksheet for the model.

Select at Takeoff: (applies to Sage Estimating users only): Refers to the part number that is used by Sage Estimating users that have estimating assemblies which use the select at takeoff feature. All assemblies in Sage Estimating must have the default item specified that matches the item chosen in this field.

Takeoff System: (If integrating with OnScreen Software's Takeoff Product or Planswift) Specify the database location where the OnScreen takeoff data resides or choose Planswift.

3.7 Purchasing Options

The Purchasing Options menu item has four distinct segments:

Budgeting & Purchasing: Allows the user to control the functionality of the Budgeting and Purchasing processes. The options under Budgeting & Purchasing are discussed below.

- **Jobs require sales approval before purchasing can begin:** Approval from Sales is needed before Estimating can receive the job file.
- **Let me use a forecasted cost basis to refresh PO costs:** If this option is checked, then by clicking the refresh costs button on Issue Budgets or Issue PO's window, users will have the ability to specify prices from the list of 12 forecast periods in addition to the Current, and Next Prices.
- **Combine multiple PO indexes per vendor to a single purchase order:** This applies to users that have the same vendor assigned to multiple PO indexes that are having POs generated in the same release. Check this box to see if all items should be combined in a single purchase order. Leaving the box unchecked will generate individual POs for each PO Index. *This must remain unchecked for BuildPro Integration.*
- **Let me add and remove contract items (model and option assemblies) on jobs:** This applies to users that either do not use HomeFront's Profit Builder, or those that want to be able to create job budgets or purchase orders without having a corresponding item coming from HomeFront's sales front end Profit Builder or HFS. With this checkbox marked, users will be able to right click and add a new contract item when in the Issue Budgets or Issue PO's screen. This can be used to create a breakdown of the job estimate by model or option that does not have to correspond to items from the sales front end.
- **Let purchasers change the sale quantity:** Allows the same option to be selected more than the specified sales quantity when published.
- **Use components in assembly definitions:** Adds the Components Grid in Edit Models & Options. (see section 9.5)

Vendor Rate Retrieval:

- **When costs are refreshed, set the item rate to zero if no value can be found:** This option functions when the refresh costs feature is used in the Issue Budgets or Issue PO's screen. This feature sets cost to zero for items that do not retrieve a rate in the cost lookup hierarchy within Precision item database or Vendor Pricelists.
- **When the vendor changes, set the item rate to zero if no value can be found:** When re-assigning the vendor on an item when issuing budgets or Purchase orders, if no price can be retrieved through the lookup hierarchy, and this setting is checked, the item rate will be zero. If the setting is not checked, and no rate can be retrieved then the item rate will not change.
- **When looking up prices don't use the item db. Use vendor pricelists only:** System price lookup will only chose from the vendor pricelists and omit any item db costs entered.

Takeoff Handling:

When inserting line items onto an estimate or purchase order that do not have a quantity assigned, the following settings will specify how to handle those lines:

- **Prompt each time:** If items being generated have no quantities the user will be asked to include the zero quantity items or not.
- **Always add them:** Zero quantity line items will be added to the estimate or purchase order.
- **Always skip over them:** Zero quantity line items will not be added to the estimate or purchase order.

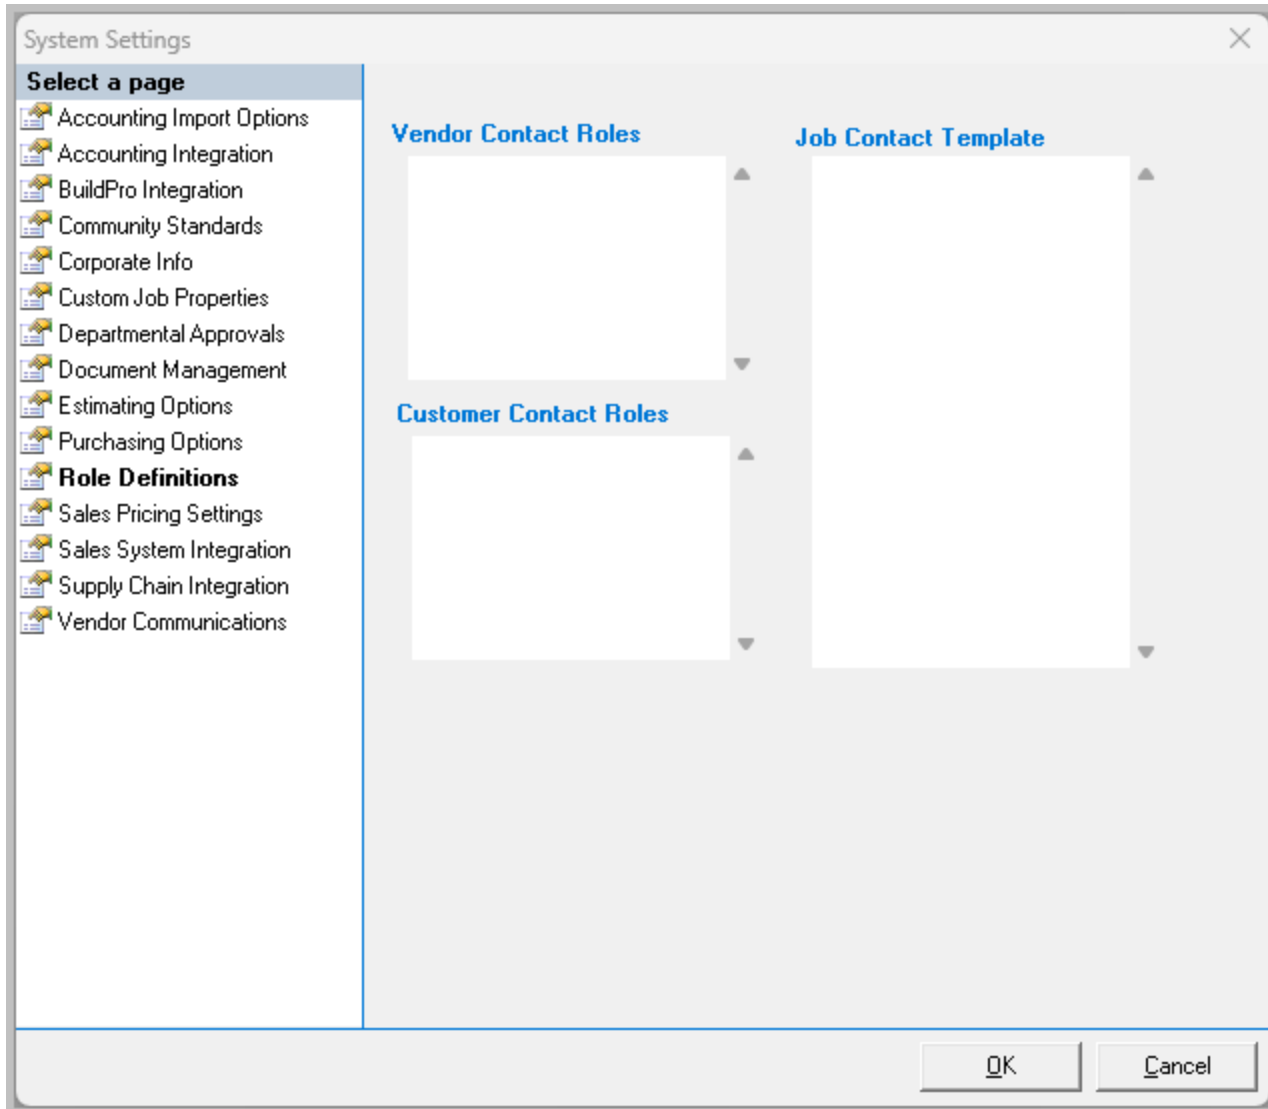

Conditional Formatting:

Specify color codes for budget or purchasing lines that have zero quantities or rates, negative quantities, manually entered rates, and data errors:

- **Qty or Rate is \$0.00** specifies: the color displayed when viewing items in issue budgets or issue PO's that have a zero quantity or rate.
- **Qty or Rate is less than \$0.00** specifies: the color displayed when viewing items in issue budgets or issue PO's that have a quantity or rate that is a negative value.
- **Non-standard rate:** specifies the color displayed when viewing items in issue budgets or issue PO's that have had the rate manually entered.
- **Data error specifies:** the color displayed when viewing items in issue budgets or issue PO's that have errors in required data such as cost codes, categories, vendors, PO indexes.

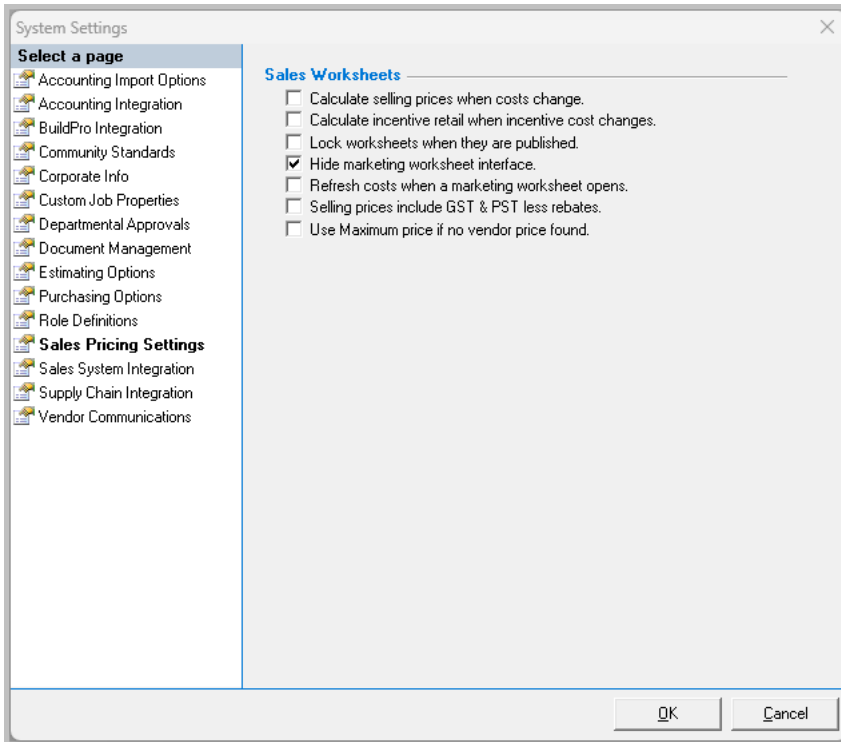

3.8 Role Definitions

This menu allows the user to specify roles to various contacts associated with Customers, Vendors and Job Contacts.

3.9 Sales Price Settings

This menu item is to set various behaviors on the sales worksheets when producing retail price books:

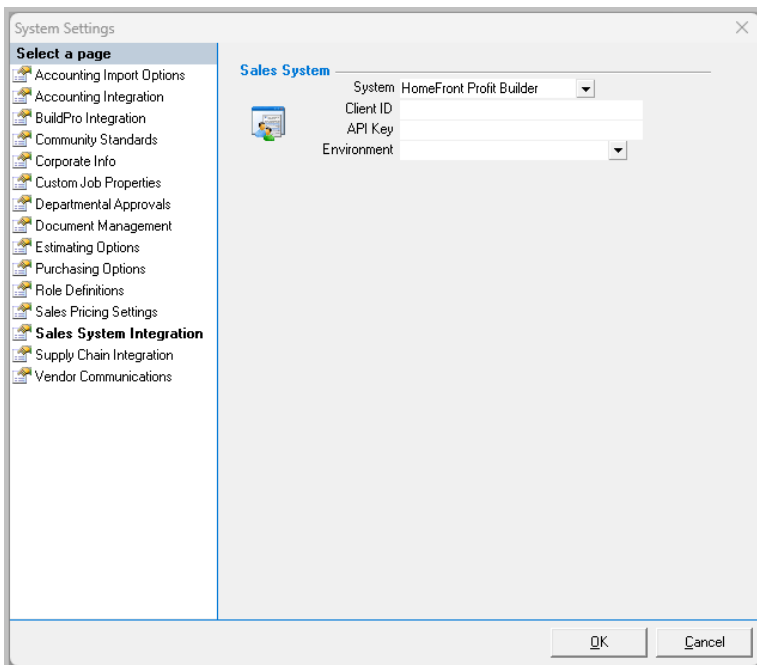

- **Calculate selling prices when costs change** affects whether the proposed sales price will change automatically when the worksheet is opened, and costs have changed. This allows users to specify a profit margin or markup that will be applied to the costs resulting in sales worksheet sales prices that can have their changes tied to cost changes.
- **Calculate incentive retail when incentive costs change:** If using the incentive field from the Estimating Options menu, this will apply.
- **Lock worksheets when they are published:** affects whether modifications can be made to sales worksheets after they have been published to the sales center. When a worksheet is locked the worksheet can be opened for viewing purposes, but no editing can be performed.
- **Hide marketing worksheet interface:** controls whether to display the menu item on the Task bar for a separate marketing sales worksheet. Used primarily for those builders who wish to have their marketing department involved in establishing retail selling prices, but who do not have the full access to the functionality provided to estimating worksheet users.
- **Refresh costs when a marketing worksheet opens:** controls whether costs should be refreshed automatically each time a marketing worksheet is opened. If the setting to calculate selling prices when costs change is checked, this will result in a change to the proposed selling price as well.
- **Selling prices include GST & PST less rebate:** applies to Canadian and Australian users only. For those users that publish a sales price that is inclusive of taxes and tax rebates.

- **Use Maximum price if no vendor price found** : allows users to use the maximum vendor price that can be found for an item if the price retrieval for the applicable vendor is unsuccessful, and no price is found, when determining the total cost for an assembly. This is common when the default vendor for a community is changed to a new vendor, but the new vendor has not provided any quotations for the various models and options being offered. This will allow the system to retrieve the highest price that can be found across all other vendors for each item detail if the default vendor price retrieval fails to find a price.

3.10 Sales System Integration

This menu item is used to specify the integrated Sales System

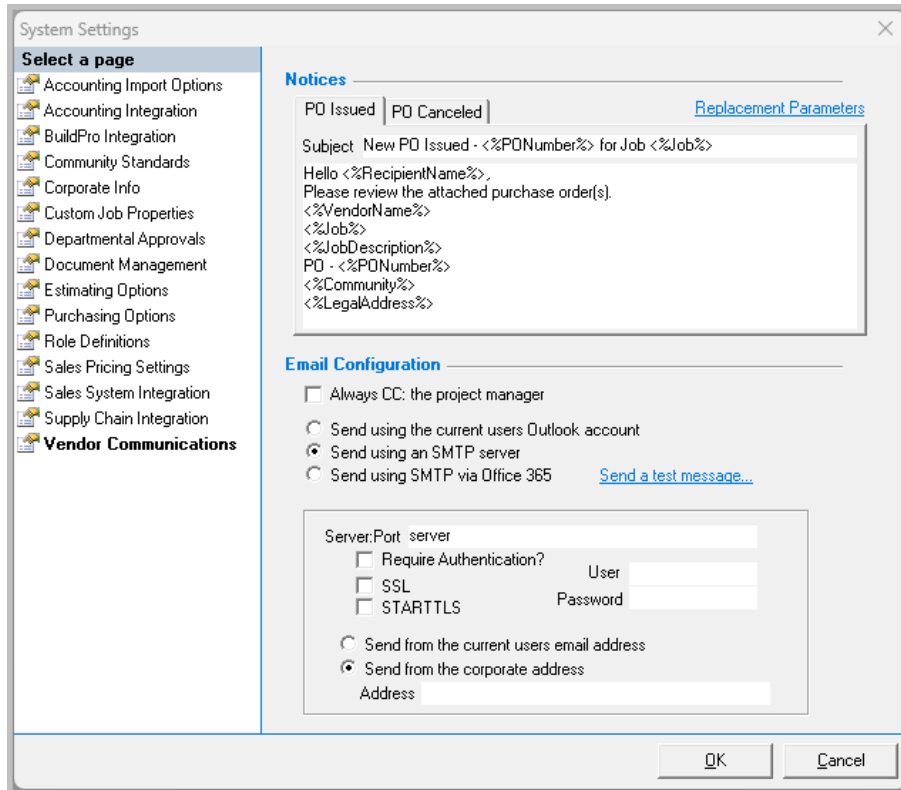

- If Builder 1440 is selected, additional information will be required.
- No information is required if HomeFront Profit Builder is selected (Default)
- If No sales system integration is chosen, the following can be edited: Communities, Phase, Option Groups, Option Categories and System Users

3.11 Vendor Communications

This option allows users to control the contents of emails that are sent using Precision. These emails include communication and Purchase Orders to vendors.

When creating entries in the Subject and body fields, Parameters can be specified that will be used to insert data in place of the parameter when sending email notifications. The parameters are those items that are contained within the <% %> characters. When these are used, the system will pull that corresponding data element and automatically place it into the email. Common uses of parameters include Job #, PO Number #, and Vendor name.

The screenshot shows the 'System Settings' window with the 'Vendor Communications' page selected. The left sidebar lists various settings categories, with 'Vendor Communications' highlighted. The main content area is divided into two sections: 'Notices' and 'Email Configuration'.

☐ Send using SMTP via Office 365 [Send a test message...](#)

Server: Port: server

☐ Require Authentication? User:

☐ SSL Password:

☐ STARTTLS

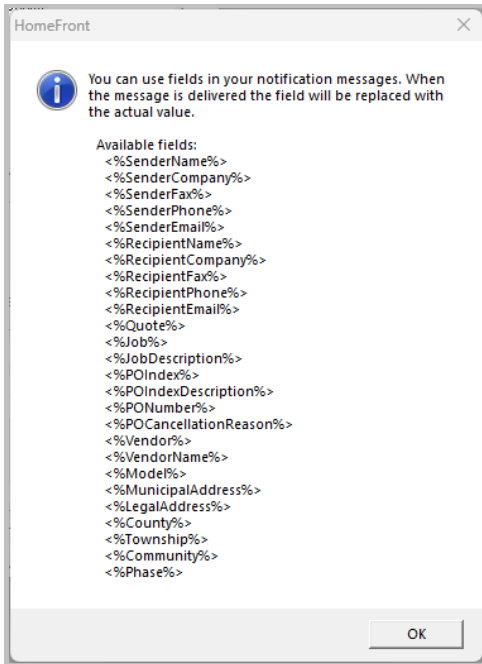

☐ Send from the current users email address

☒ Send from the corporate address

Address:

Buttons: OK, Cancel

The full list of available parameters can be found by clicking on the [Replacement Parameters](#) link found in the upper right of the menu window. Below are the available parameters:

PO Delivery and PO Cancellation

- **Subject:** Specify the standard subject line that should be used when sending or cancelling PO's
- **Body:** Specify the standard email body that should be used when sending or cancelling PO's

Send from the current user's Outlook account: This selection will use the email address and information of the current user to send the communication.

Send using an SMTP server and/or Office 365: The SMTP server for Outlook email is the server that handles outgoing email messages from your Outlook email client. Additional fields will appear and need to be completed.

Send from the corporate address: This selection will use the email address and information of the corporation to send the communication.

3.12 User Permissions

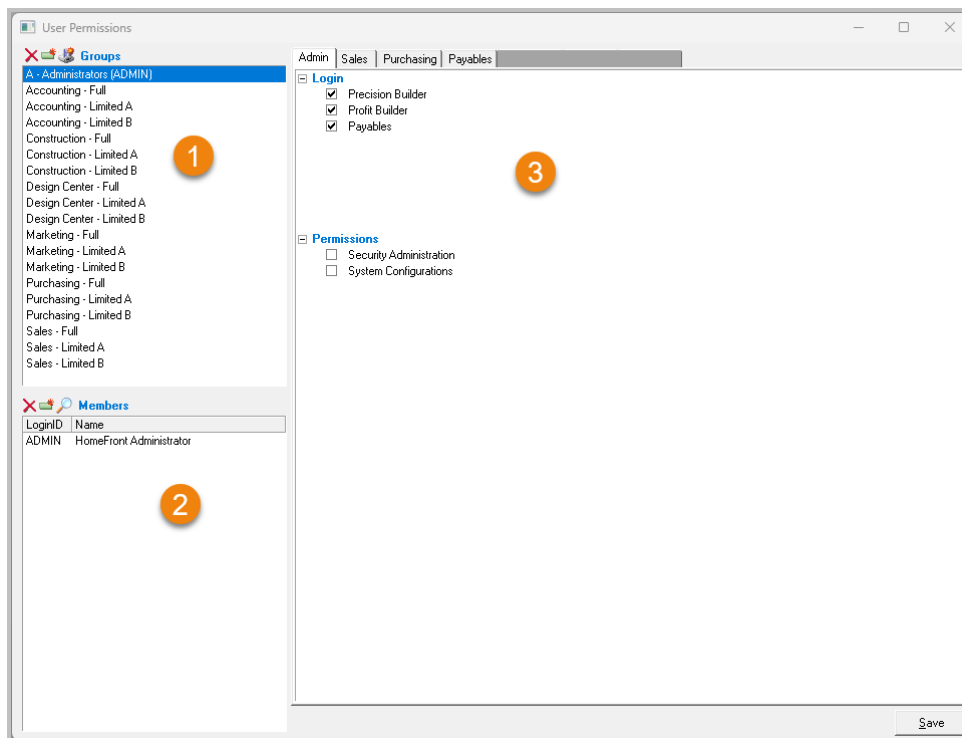

The User Permission Menu is located and can be edited in all modules of HomeFront (Precision/Profit/Payables Desk). All access menus will update the master user permissions table.

 *Precision: Tools/User Permissions*

 *Payables: Tools/User Permissions*

 *Profit: Tools/User Permissions*

Accessing the menu will give you the below window (below: users in Groups and Members are examples only)

1. **Groups:** A group of users that will have the same set of permissions. (i.e.: Administration, Accounting, Purchasing)
2. **Members: users within each Group:** A User ID can only belong to one User Group. If a group contains multiple levels of user permissions (i.e.: Sales Agents vs Sales Managers), additional User Groups will need to be created to define another level of permissions.

3. Modules of HomeFront in use:
- **Admin** – Defines Modules that are accessible for the User Group highlighted.
 - **Sales** – Defines user permissions within Profit (HFS where an * is used)
 - **Purchasing** – Defines user permissions within Precision.
 - **Payables** – Defines user permissions within Payables Desk
 - **Scheduling** – Defines user permissions within Project Manager. *(Nonstandard module and not applicable with BuildPro)*
 - **Warranty** – Defines user permissions within Quality Builder *(Nonstandard module)*
 - **Workticket** – Defines user permissions within Workticket *(Nonstandard module)*

 The modules of HomeFront shown in the User permissions menu are contingent on the Hyphen License Agreement and will vary by client.

To complete the User Permissions the following steps will be completed:

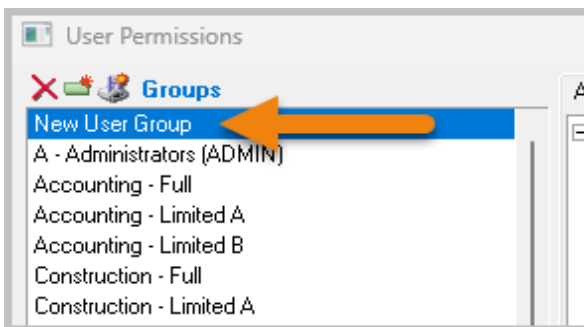

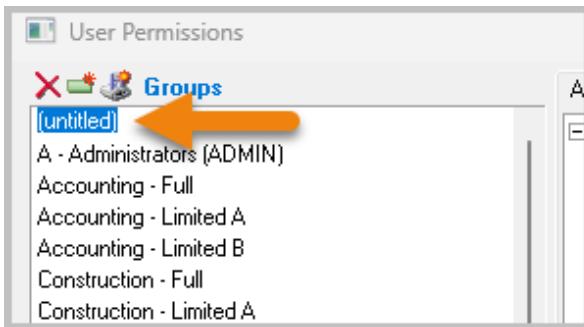

- Create User Group(s)
- Refine detailed tasks for the User Group (s)
- Create Members for each User Group

3.12.1 Create User Group(s)

From the User Permissions window, in the Groups pane, Choose the “Add New” represented by the magnified icon below.

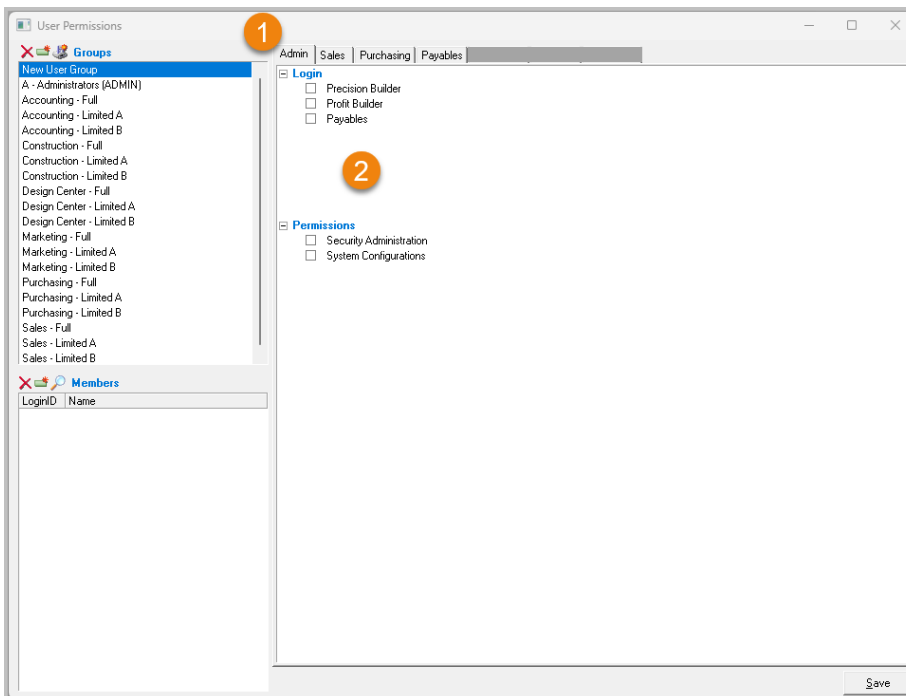

A new Group will be created and can be renamed in the highlighted section by double clicking on the “untitled” row.

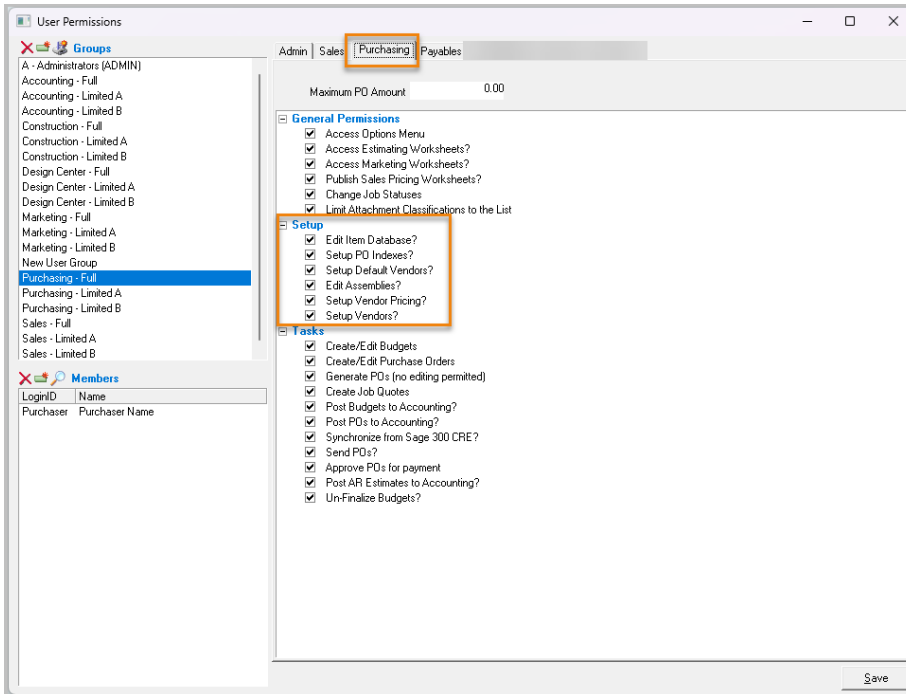

3.12.2 General Module access for the User Group(s)

From the **Admin** tab, assign modules to each User Group.

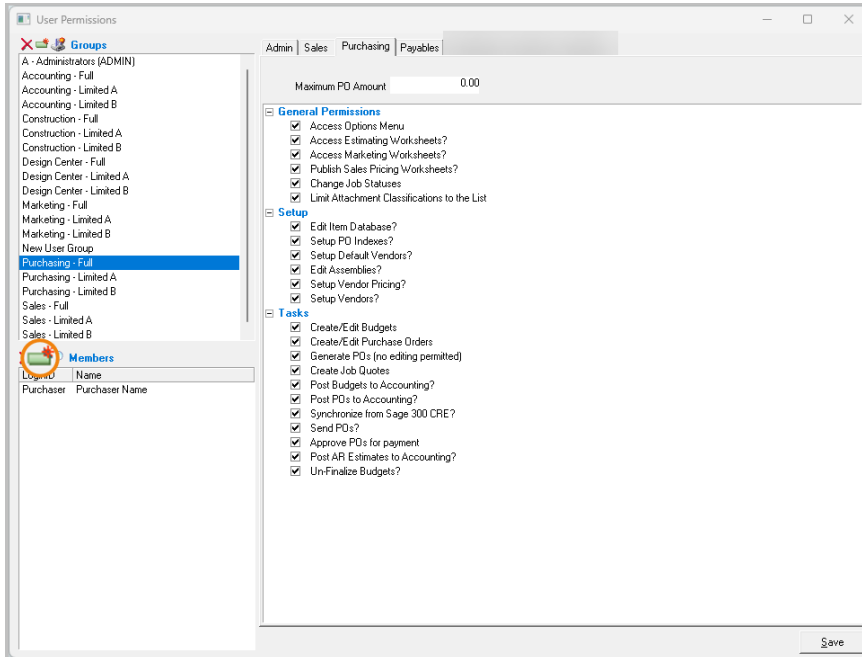

3.12.3 Define detailed tasks for the User Group(s)

Once the User Group is created and modules are assigned, choose the tab of permissions to be selected for the new group. The example below will be assigning permissions to the Purchasing group using the “Purchasing” tab. Permissions can be selected for the group by ensuring the check box is selected:

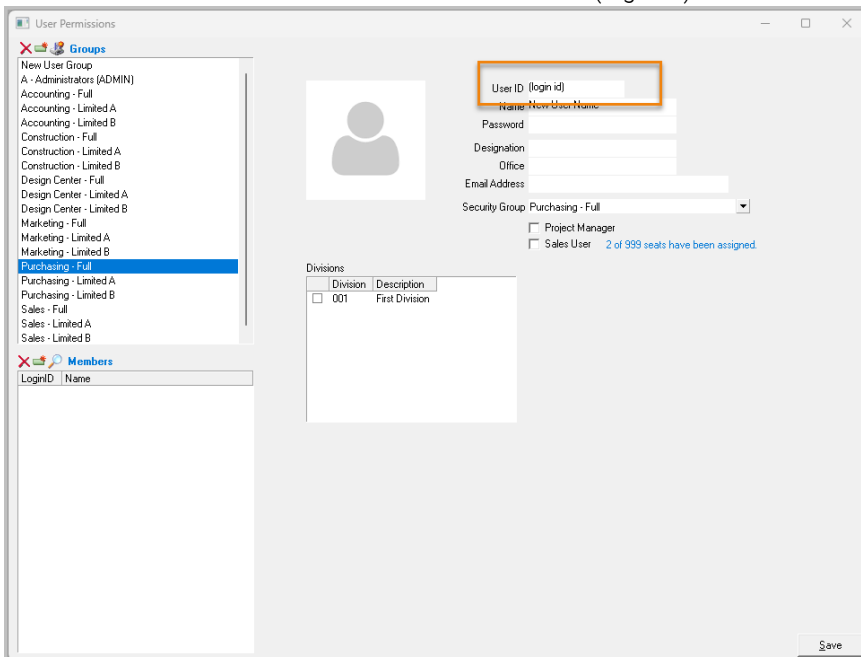

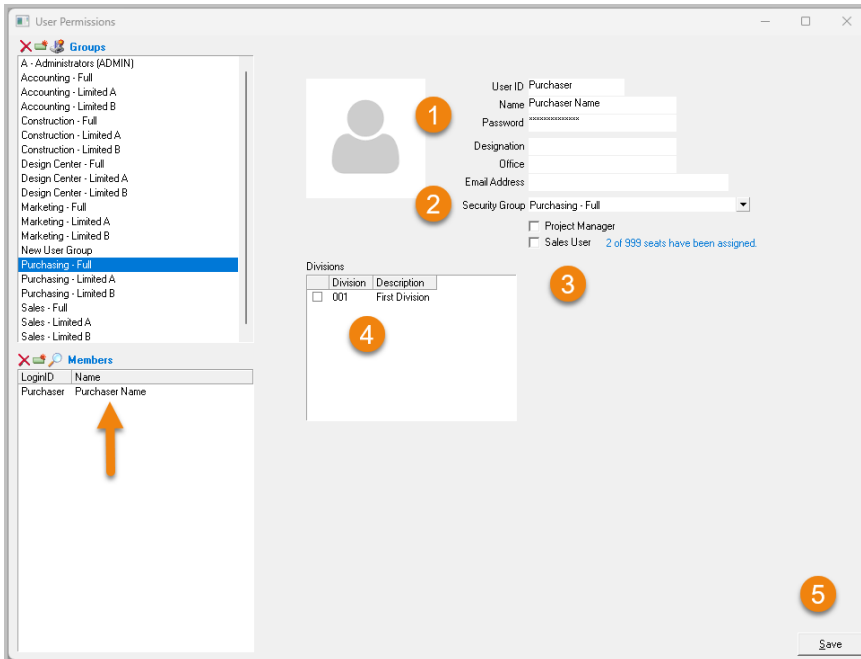

3.12.4 Create Members for each User Group

From the User Permissions window, in the Members pane, Choose the “Add New” represented by the magnified icon below:

A new Member line will be created and identified as (login id)

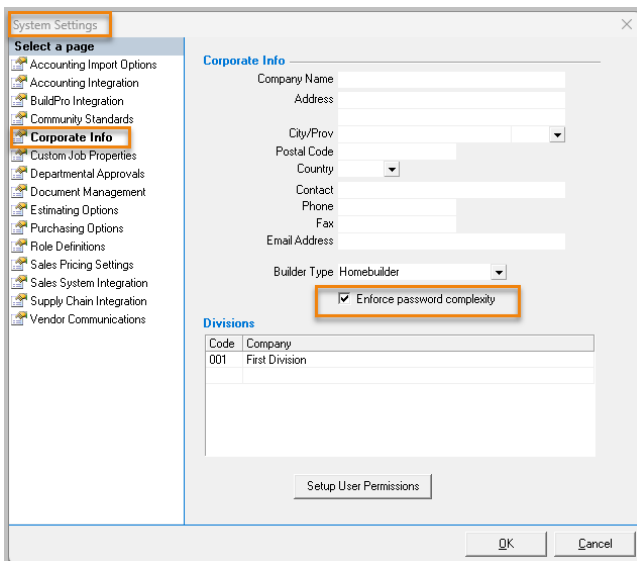

The 'User Permissions' dialog box is shown with the 'Groups' tab selected. The left pane lists various user groups, with 'Purchasing - Full' highlighted. The right pane contains fields for user information, including User ID, Name, Password, Designation, Office, Email Address, and Security Group. A 'Divisions' table is also present. Numbered callouts 1 through 5 indicate specific areas of interest: 1 points to the User ID field, 2 points to the Name field, 3 points to the Security Group dropdown, 4 points to the Divisions table, and 5 points to the Save button.

Enter the User information in the RIGHT pane:

1. ****User ID (mandatory)**
- **Name (mandatory)**

Password: Must be unique (complexity optional): the below *unchecked trigger* will allow users to be added without a complex password.

The 'System Settings' dialog box is shown with the 'Corporate Info' tab selected. The left pane lists various system settings, with 'Corporate Info' highlighted. The right pane contains fields for corporate information, including Company Name, Address, City/Prov, Postal Code, Country, Contact, Phone, Fax, Email Address, and Builder Type. A checkbox labeled 'Enforce password complexity' is checked. A 'Divisions' table is also present. The 'Setup User Permissions' button is visible at the bottom.

A Complex Password is defined as:

- More than 8 characters and
- Are different than the user ID
- Have a complexity score greater than 15 points

Complexity Score is awarded as follows:

- Contains uppercase – 5 points
- Contains lowercase – 5 points
- Contains numeric – 5 points
- Contains format characters – 5 points
- Longer than 12 characters – 5 points
- Longer than 18 characters – 10 points
- Longer than 30 characters – 15 points

Designation (title/position) (optional)

Office (optional)

Email Address (optional)

2. **Security Group:** Choose Group user is to belong to by using the drop-down pick list.
3. **Project Manager box:** To be used for Project Builder or Approval users within HomeFront. Not applicable for BuildPro
4. **Sales User:** Must be checked if the user is to access the "HomeFront Sales portal". The User ID and password and email entered in this menu will allow the user to log into the HomeFront Sales portal.
5. **Select Division(s) the user is to have access to.** Listed Division Descriptions are client specific and will vary.
6. **SAVE**

Upon completion of all required fields, the new member will appear in the member's window in the LEFT pane.

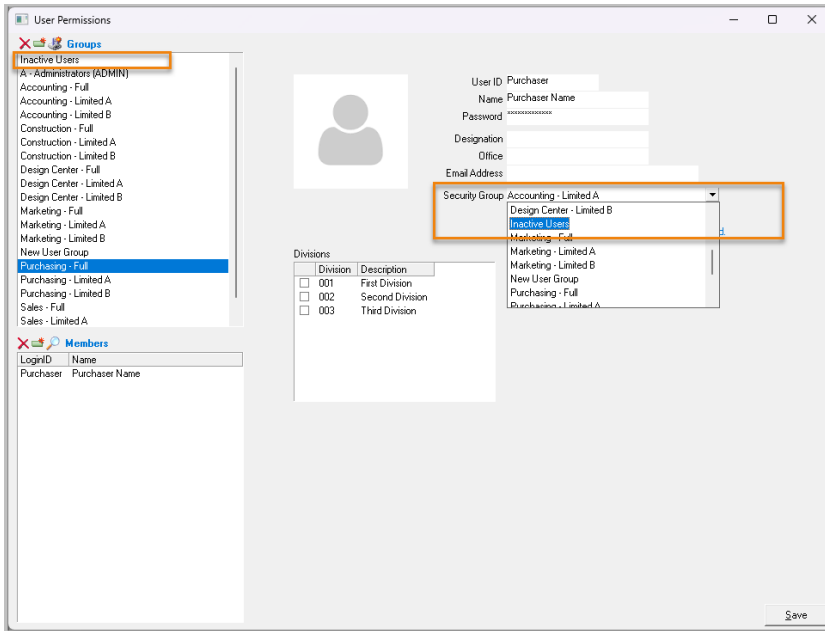

DO NOT type over an existing user. All users must be created using the "add new" icon.

DO NOT remove the existing "HomeFront Administrator" user. This user exists for Hyphen support log in.

3.12.5 Inactivating Users

Users that no longer require or permitted to access HomeFront must be inactivated, NOT DELETED. Users have potentially been attached to data or sales tasks and deleting the user will make some records inaccessible. To inactivate a user, an Inactive User Group can be created, and the inactive user can be moved using the **Security Group** drop-down:

Ensure all boxes are unchecked for the inactive User Group.

4.0 CREATING A NEW DIVISION

HomeFront Divisions are individual entities within HomeFront. They can be used for substantially different Product Types, or to align with accounting data sets. Within each Division is the ability to align data differently.

The HomeFront Installation will have included one Division unless additional were included with the implementation. During or after Implementation, additional Divisions can be added.

To add an additional Division, the user will need access to the following:

4.1 System Settings

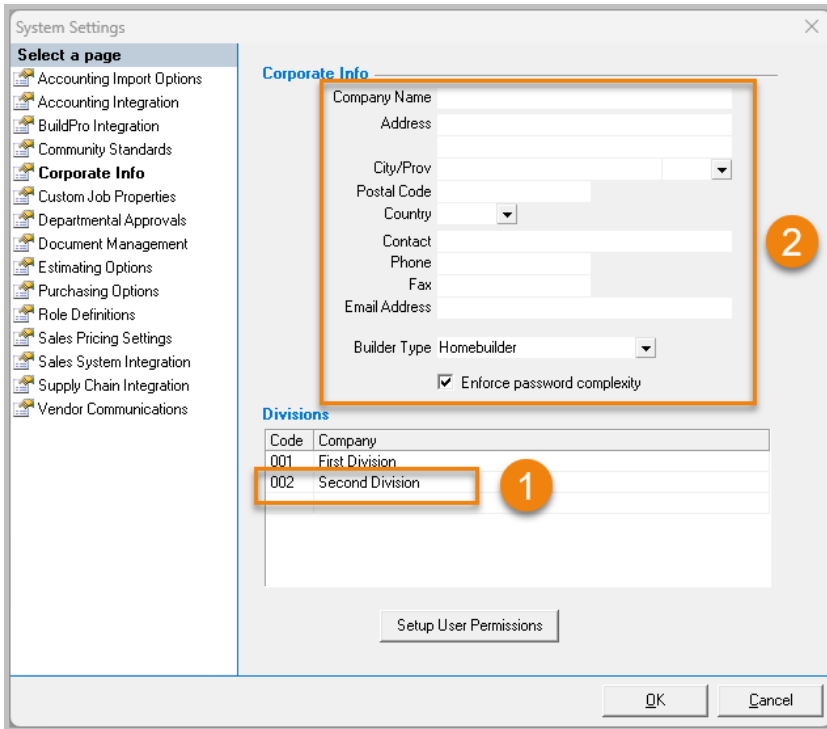

- Division Information/User Permissions
- Accounting Integration Menu
- BuildPro Integration Settings (if applicable)
- Purchasing Options

Log in to the Division from which the desired Estimating Item Database and PO Index list will be copied from.

4.2 Adding Division Information

 Precision/Tools/System Settings/Corporate Info

System Settings

Select a page

- Accounting Import Options
- Accounting Integration
- BuildPro Integration
- Community Standards
- Corporate Info**
- Custom Job Properties
- Departmental Approvals
- Document Management
- Estimating Options
- Purchasing Options
- Role Definitions
- Sales Pricing Settings
- Sales System Integration
- Supply Chain Integration
- Vendor Communications

Corporate Info

Company Name
Address
City/Prov
Postal Code
Country
Contact
Phone
Fax
Email Address
Builder Type: Homebuilder
☒ Enforce password complexity

Divisions

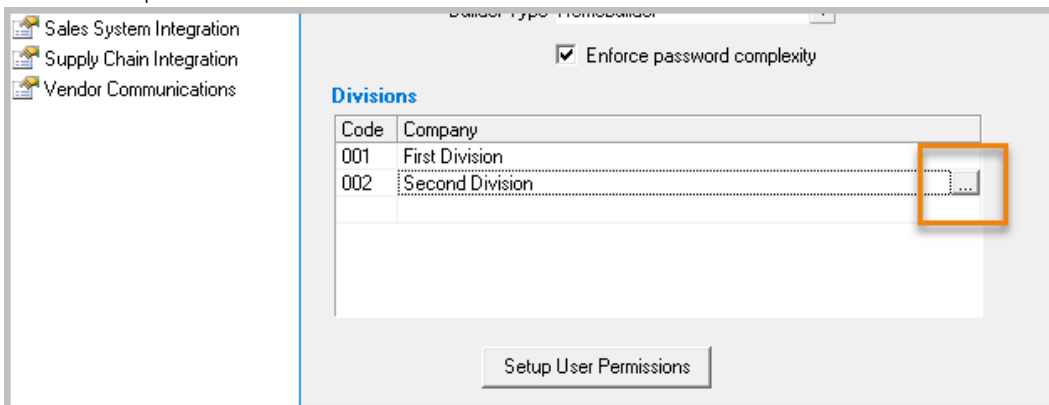

Code	Company
001	First Division
002	Second Division

Setup User Permissions

OK Cancel

1. Add a new Division Code (3 numerical digits if integrated with BuildPro) followed by a division description in the Company field.
2. Complete the Corporate Info section.

Clicking the ellipsis next to the new Division opens a Company information window. Complete this information if it is different than the Corporate Info.

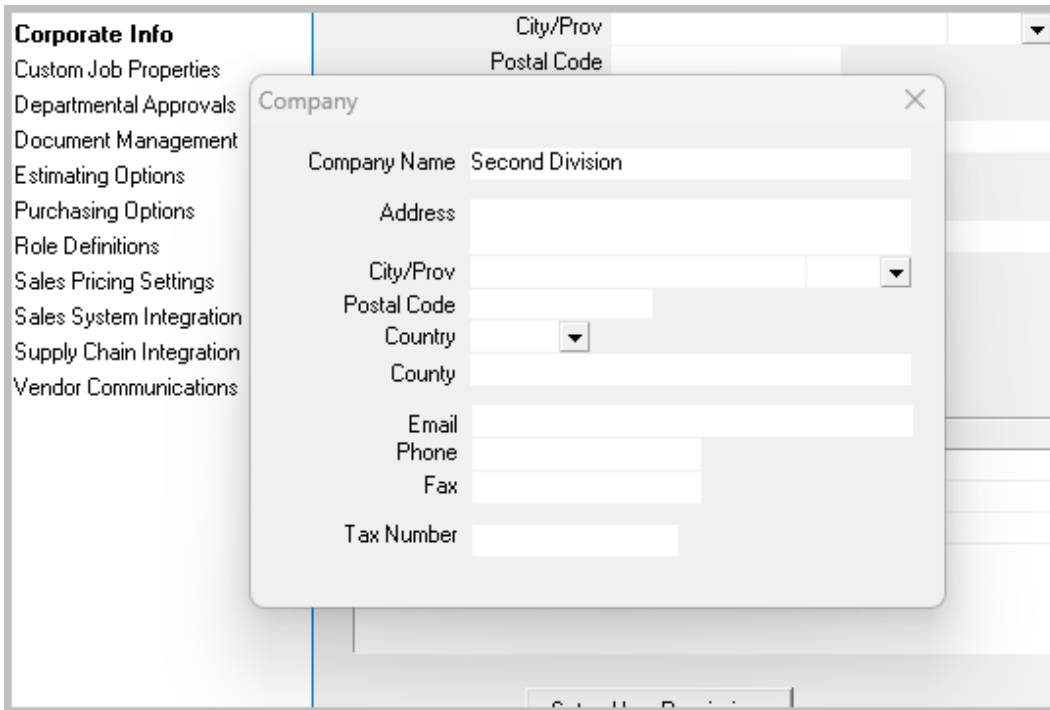

Builder Type: Homebuilder
☒ Enforce password complexity

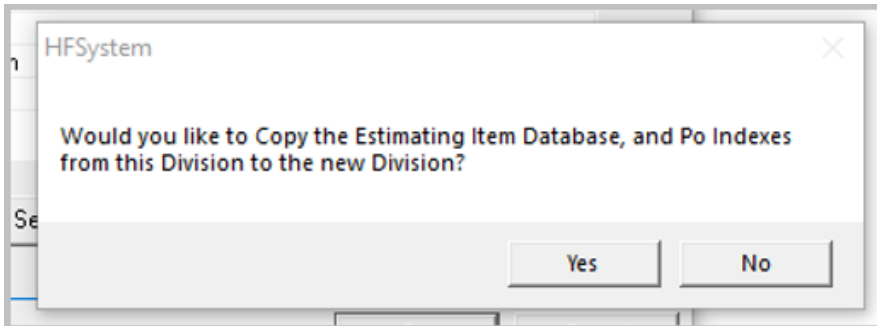

Divisions

Code	Company
001	First Division
002	Second Division

Setup User Permissions

Once all information is complete, click OK. The following prompt will appear:

 ***As per the prompt, this is the only data that will be copied from the existing division to the new division as well as the only time to complete this automatically. System Settings excluding Accounting and BuildPro will also copy to all Divisions.***

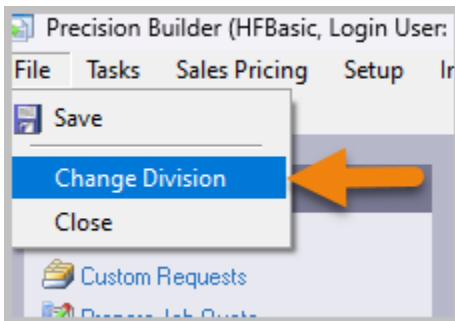

4.3 Adjusting User Permissions

Precision/Tools/User Permissions

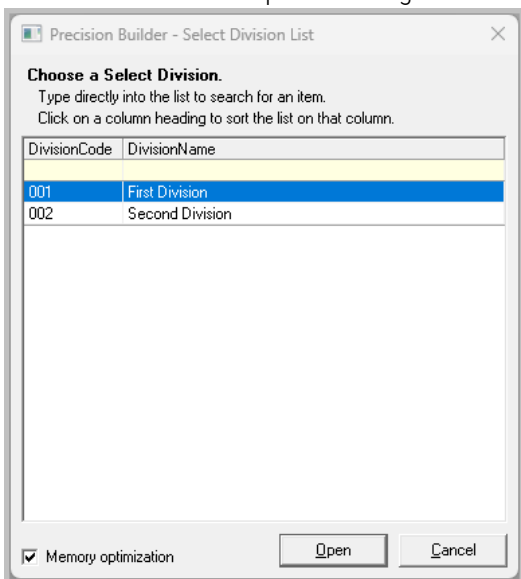

The new division will need to be added to each applicable user, including the user creating the new Division:

To change to the new division:

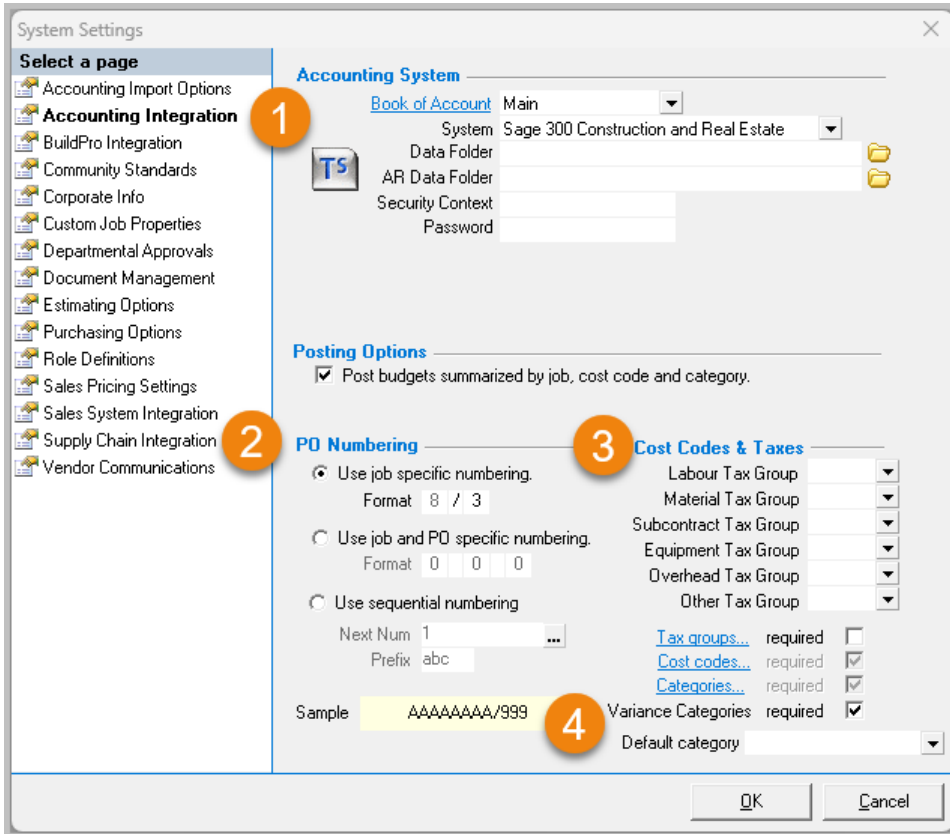

A selection menu will open to change divisions.

4.4 Accounting Integration

Precision/Tools/System Settings/Accounting Integration

1. Set Accounting system (Division-specific setting)
2. Set PO Numbering (Division-specific setting) ****PO number length is accounting platform dependent****
3. Set Tax Group preference (Division-specific setting)
4. Set Enforce Variance Category Use & Default (Division-specific setting)

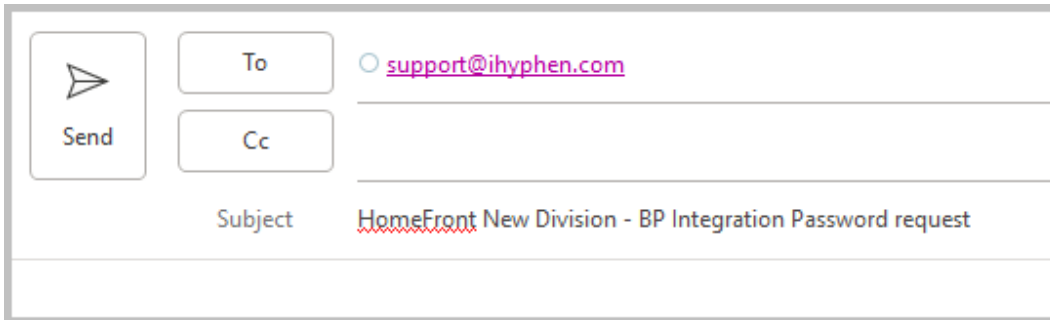

Precision/Tools/Database Synchronization:

1. Synchronize Vendors
2. Synchronize Cost Codes
3. Synchronize Accounts Receivable
4. Synchronize Tax Settings

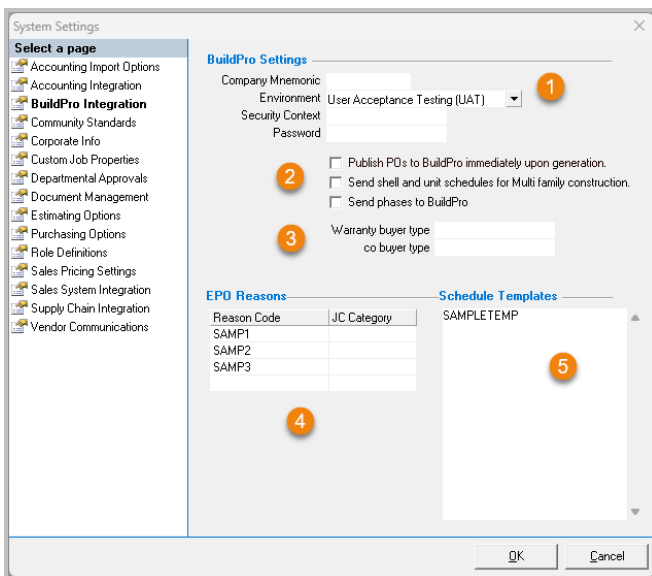

Precision > Tools > System Settings > BuildPro Integration (if applicable):

1. Enter Company Mnemonic (same for all divisions)
Enter UAT or PROD for integration.
Enter Security Context (same for all divisions)
Password: Submit an email to support@ihyphen.com

The image shows an email composition window. The 'To' field contains 'support@ihyphen.com'. The 'Subject' field contains 'HomeFront New Division - BP Integration Password request'. There is a 'Send' button on the left and a 'Cc' field below the 'To' field.

2. Select PO publish preference, Multifamily & Phase preferences (Division-specific setting)
3. Enter Warranty buyer types if applicable.
4. Enter EPO Reasons and applicable JC Category (Division-specific setting)
5. Enter Schedule Templates (Division-specific setting)
6. Alert BP of new division via ticket to Support@ihyphen.com
7. Update settings.ini file for new division (see HFBP Integration guide)

The image shows the 'System Settings' dialog box. The 'BuildPro Settings' section includes fields for 'Company Mnemonic', 'Environment' (set to 'User Acceptance Testing (UAT)'), 'Security Context', and 'Password'. There are checkboxes for 'Publish POs to BuildPro immediately upon generation', 'Send shell and unit schedules for Multi family construction', and 'Send phases to BuildPro'. The 'Warranty buyer type' and 'co buyer type' fields are also present. The 'EPO Reasons' section has a table with columns 'Reason Code' and 'JC Category', containing rows 'SAMP1', 'SAMP2', and 'SAMP3'. The 'Schedule Templates' section has a text area labeled 'SAMPLETEMP'. Numbered callouts 1 through 5 are placed over the Environment dropdown, the checkboxes, the Warranty buyer type field, the EPO Reasons table, and the Schedule Templates text area respectively.

4.5 Division Replication Wizard

4.5.1 Concept

This tool allows the user to copy models and option assemblies from one Division to another.

4.5.2 Data Inclusions and Exclusions

Inclusions:

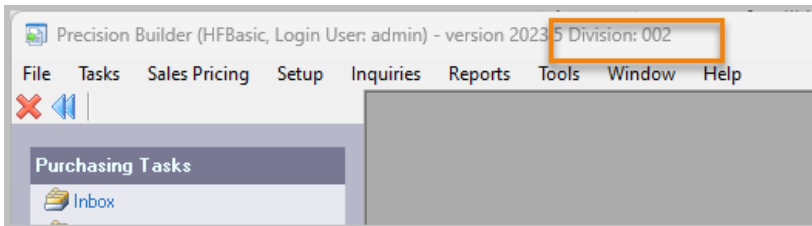

- Selected Assemblies
- Any Items and PO Indexes that are not in the “copy to” Division as needed for the assemblies.

Exclusions:

- Job Cost Codes, Job Cost Categories and Vendor records as they will be synchronized from the accounting platform
- Item database and PO Indexes as these can be copied upon Division creation
- Sales Categories and Subcategories
- Attributes as these apply to all Divisions
- Rooms and Dimensions as these apply to all Divisions
- Model dimensions
- Vendor Pricing
- Sales Pricing

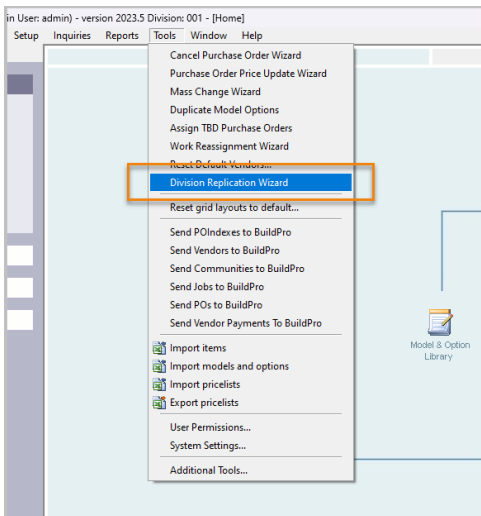

4.5.3 Using the Division Replication Wizard

This wizard allows the user to copy **from** any source division to the division they are **LOGGED INTO**. To ensure the user is in the correct Division, view the division identifier in the top left corner:

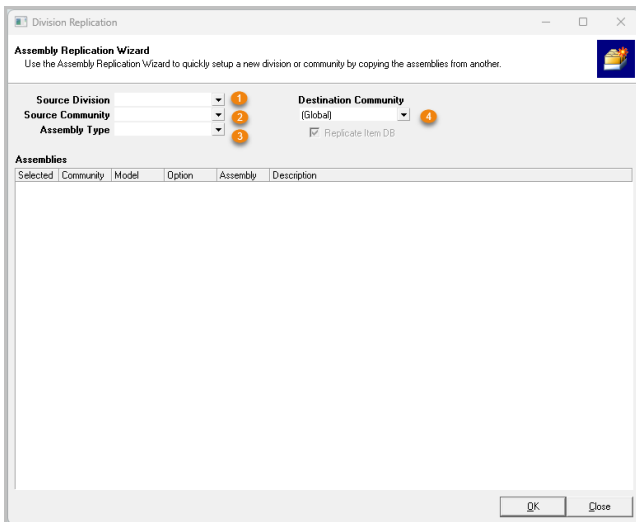

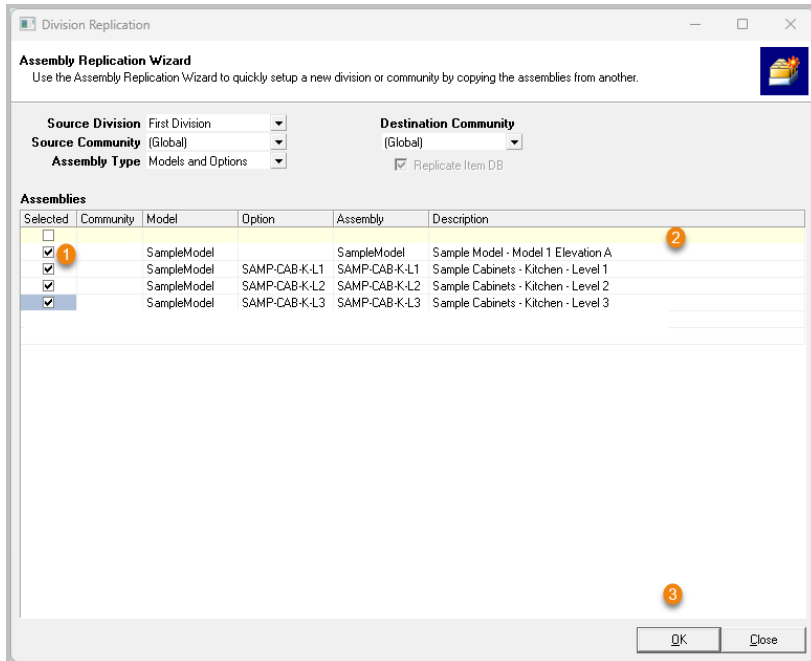

Precision/Tools/Division Replication Wizard

The Assembly Replication Wizard window will appear:

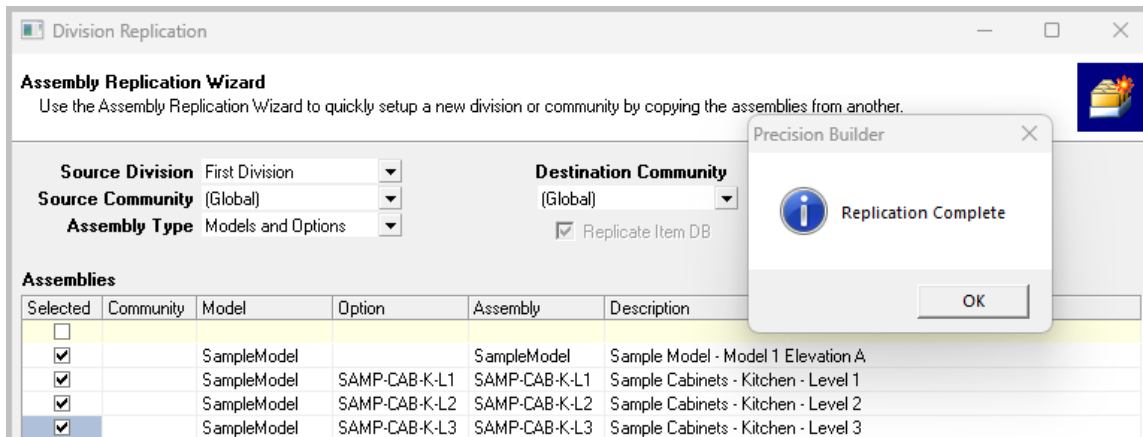

1. Source Division: Division to be copied **FROM**
2. Source Community: Community to be copied **FROM**
3. Assembly Type: Assembles to be copied
4. Destination Community: Community to be copied **TO**

Field definitions will populate a list of Assemblies.

1. Selected: Further select assemblies to be copied by checking the box
2. Search row: Enter search criteria to further refine the list of assemblies.
3. OK: Click OK to complete the process

The Replication Complete notification will appear once complete.

5.0 COMMUNITY AND LOT INVENTORY SET UP ▲

5.1 Creating Communities

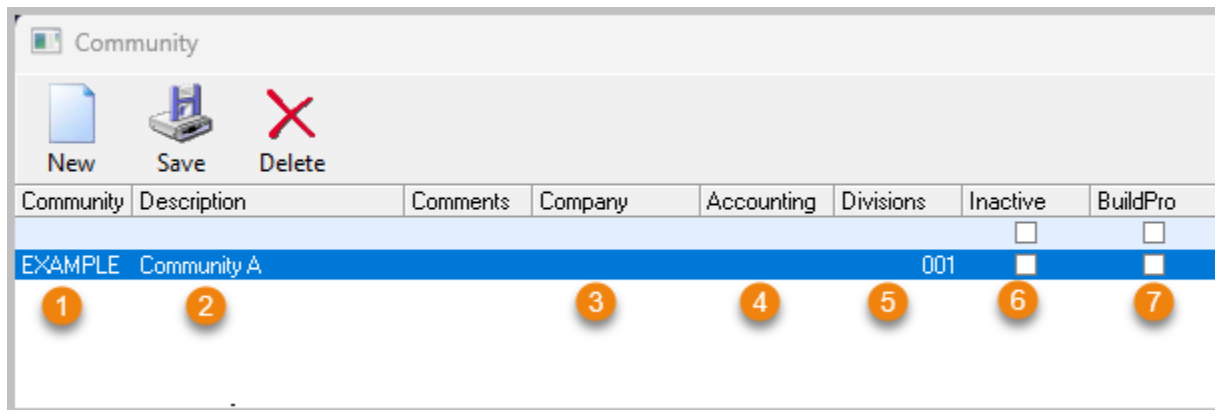

Communities are Areas or Subdivisions in which an organization will be completing projects. When installing Precision Builder for the first time, creation of Communities is one of the first and foremost things to do. The following steps describe how to create a community.

Precision/Set Up/Community Set Up

Click . The first available row will be blank.

Community	Description	Comments	Company	Accounting	Divisions	Inactive	BuildPro
EXAMPLE	Community A				001	☐	☐

1. **Community:** Alpha Numeric code used to represent the community. Must be unique.
2. **Description:** Full name of the community that appears in selection lists when assigning options or models to a community.
3. **Company Details:** use the ellipsis to see a further pop out window. This company info will be sent to BuildPro.
4. **Accounting:** Separate GL Prefix sets can be assigned to each community. Refer to the Accounting Integration Guide for further info.
5. **Division assignment:** Assign the community to a division.
6. **Inactive:** Toggle for making a community inactive.
7. **BuildPro:** Toggle to enable for BuildPro (see HomeFront BuildPro integration Guide for more details)

For multi-Division users, must be in division to see the active communities in that division.

After entering all the necessary information click **Save**. The community will be saved into the Community list.

The Community ID CANNOT be edited once saved.

5.2 Modifying Communities

Precision/Set Up/Community Set Up

Click on the field to be modified and enter the change. **SAVE** once completed. To Inactivate a community, check the box in the column with the header "Inactive".

 Community

  Save
  Delete

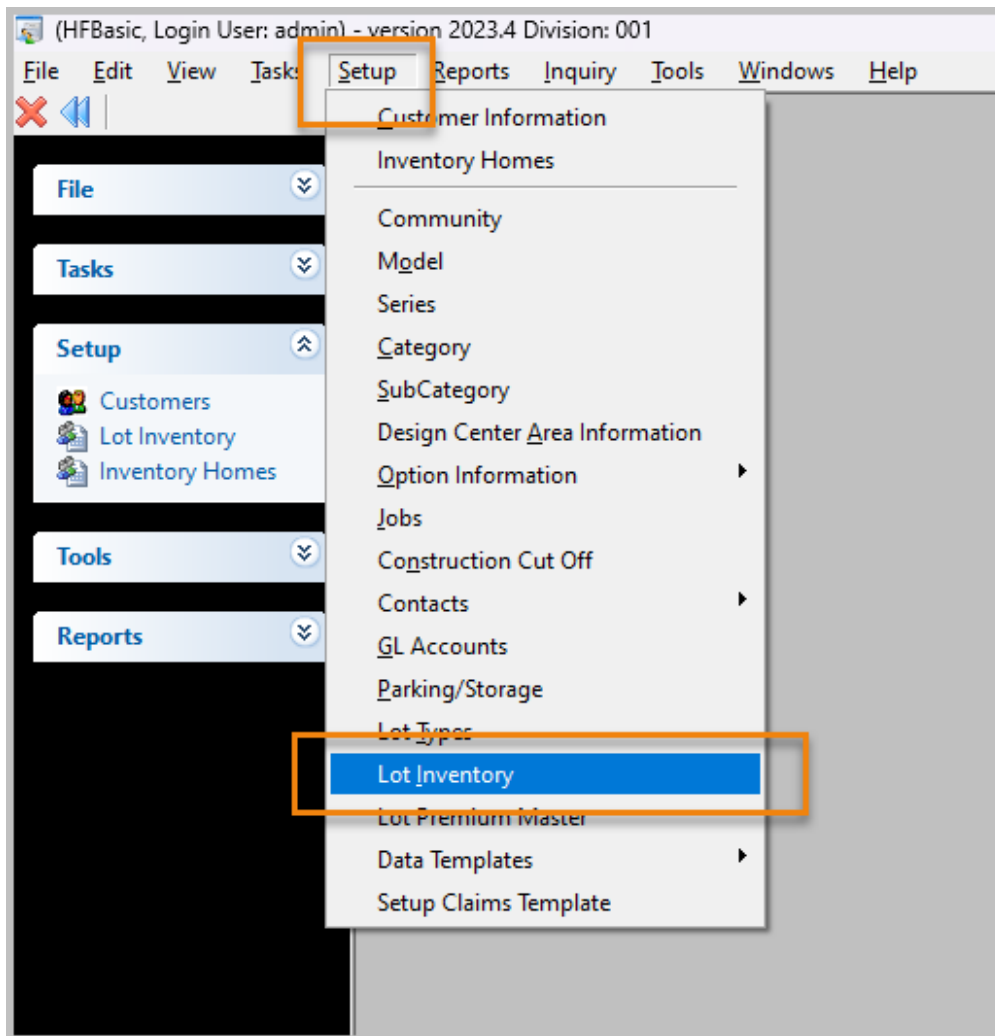

Community	Description	Comments	Company	Accounting	Divisions	Inactive	BuildPro
EXAMPLE	Community A				001	☐	☐
SAMPLE	Community B				001	☒	☐

5.3 Creating Lot Inventory in Profit

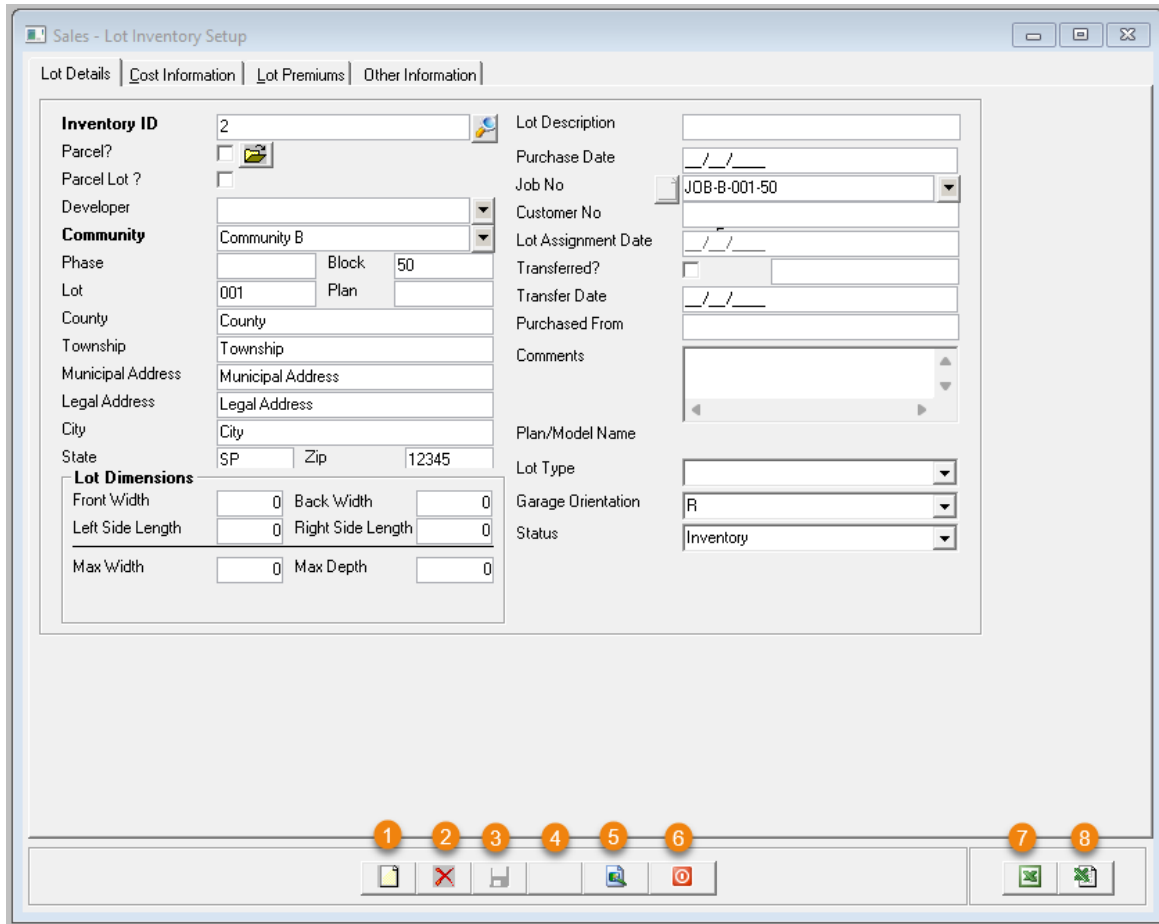

Lot Inventory is used to help track the builder's individual parcels and lots of land available for sale or for creating Inventory Homes. Each lot can be set up within HomeFront Profit Builder and the lot information can be sent directly to the integrated accounting system. Information that may be stored about each lot includes the address and physical location, who developed the lot, cost and selling prices, the Job Number, customer that purchased the lot and any scheduled payments to be made.

To access the Lot Inventory window, execute the following:

 *Profit/Set Up/Lot Inventory*

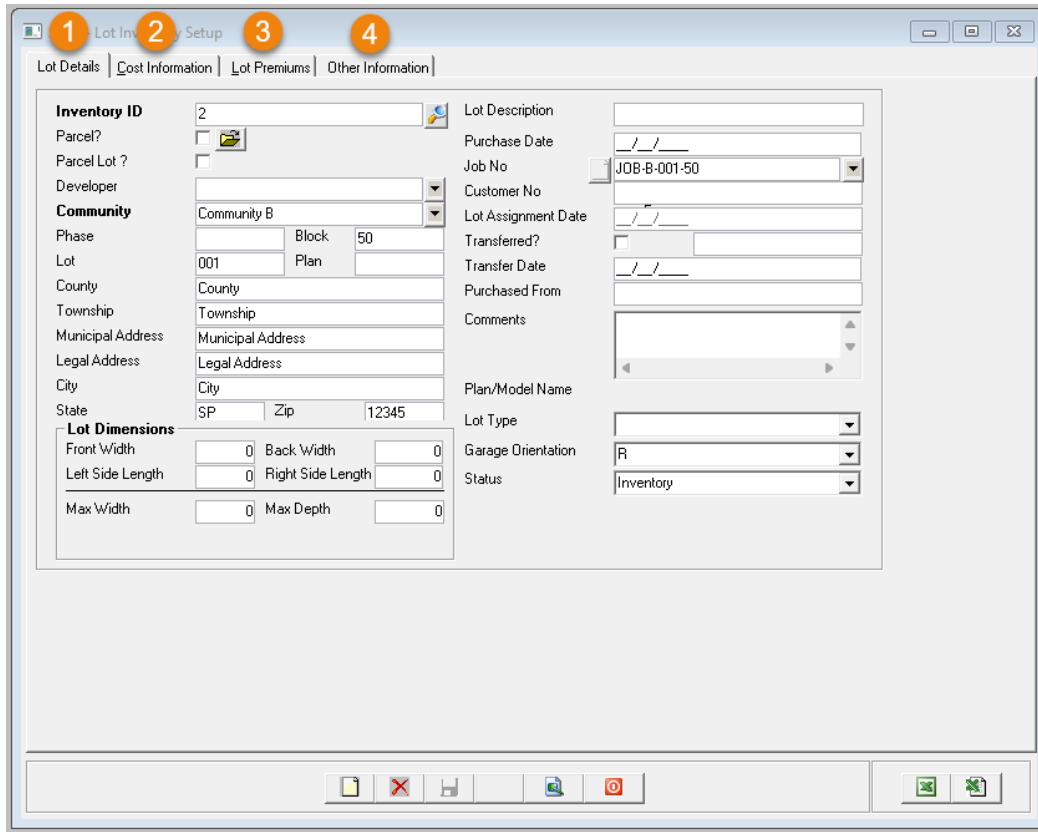

Lot Inventory Icons:

1. **Add New Record:** Create a new lot.
2. **Delete Lot Record:** Delete the currently selected lot.
3. **Save:** Save changes to the current lot record. Any time this button is active, it indicates that changes have been made to the lot. Click to save the changes or click the Undo button to reverse the changes and restore the lot without saving the changes.
4. **Undo:** Reverse changes to the current lot. Any time this button is active, it indicates that changes have been made to the lot. Click to reverse the changes and restore the lot without saving the changes or click Save to save the changes.
5. **Refresh**
6. **Close:** Close window
7. **Import from Excel:** Import lot information from a Microsoft Excel spreadsheet.
8. **Export to Excel:** Export lot information to a Microsoft spreadsheet

Lot inventory Tabs:

The screenshot shows a software window titled "Lot Inventory Setup" with four numbered tabs: 1. Lot Inventory, 2. Setup, 3. Lot Details, and 4. Other Information. The "Lot Details" tab is active, displaying a form with the following sections:

- Inventory ID:** A text field containing the number "2".
- Parcel?** A checkbox.
- Parcel Lot?** A checkbox.
- Developer:** A text field.
- Community:** A dropdown menu showing "Community B".
- Phase:** A text field.
- Block:** A text field containing "50".
- Lot:** A text field containing "001".
- Plan:** A text field.
- County:** A text field.
- Township:** A text field.
- Municipal Address:** A text field.
- Legal Address:** A text field.
- City:** A text field.
- State:** A text field containing "SP".
- Zip:** A text field containing "12345".
- Lot Dimensions:** A section with multiple input fields for Front Width, Back Width, Left Side Length, Right Side Length, Max Width, and Max Depth, all currently set to "0".
- Lot Description:** A text field.
- Purchase Date:** A date field.
- Job No:** A dropdown menu showing "JOB-8-001-50".
- Customer No:** A text field.
- Lot Assignment Date:** A date field.
- Transferred?** A checkbox.
- Transfer Date:** A date field.
- Purchased From:** A text field.
- Comments:** A large text area.
- Plan/Model Name:** A text field.
- Lot Type:** A dropdown menu.
- Garage Orientation:** A dropdown menu showing "R".
- Status:** A dropdown menu showing "Inventory".

At the bottom of the window, there is a toolbar with icons for file operations and a status bar.

1. **Lot Details:** Click the Add new record icon. All fields in this window will be cleared except the Inventory ID field which is a system generated ID to ensure unique identifiers.

Required Fields:

- **Inventory ID:** System generated, and MUST be unique.
- **Community:** Choose the applicable community from the drop down
- **Lot:** Lot number
- **Municipal Address:** residential address as assigned.
- **City:** as assigned
- **State/Province:** as assigned.
- **ZIP/Postal Code:** as assigned.
- **Job Number:** Identifier for each lot record
- **Status:** Inventory needs to be selected for new records being added to the Lot Inventory. The status will be updated automatically as a Job moves through the sales or inventory process.

Inventory: Only lots which have Status Inventory can be selected by a customer

Pending Sale: A lot selection by a customer sets Status to Pending Sale

Sold: The Purchased check box on the Customer Summary tab sets Status to Sold

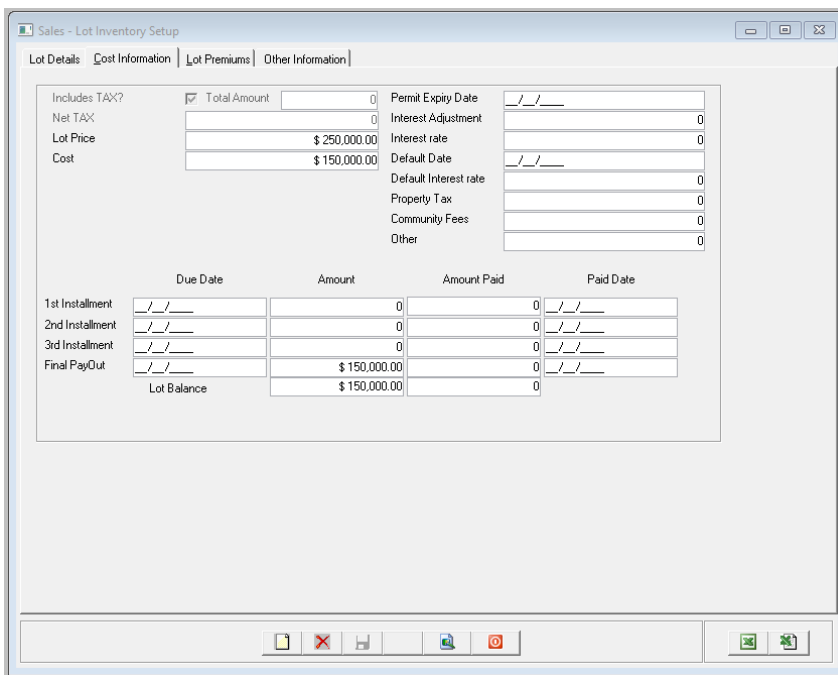

Closed: System Settings can be used to set Status to Closed when a sale is completed

Additional fields:

- **Lot Dimensions:** Actual Width/Depth and Left/Right Side Length are the actual lot measurements. Max Width/Depth - determines the maximum home size that will fit on the lot
- **Purchase Date:** the date the lot is purchased by the builder.
- **Customer Number:** will be populated by HomeFront when the lot is selected by a customer.
- **Lot Assignment Date:** will be populated by HomeFront when the lot is selected by a customer.
- **Garage Orientation:** can be used to note the Garage side. For BuildPro users, this will default to R in BuildPro if left empty.

Click **SAVE** to save the lot record.

2. **Cost Information:** Used for financial lot information including installment payments, property taxes and community fees.

Cost Information			
Includes TAX?	☒	Total Amount	0
Net TAX			0
Lot Price		\$ 250,000.00	
Cost		\$ 150,000.00	
Permit Expiry Date			/ /
Interest Adjustment			0
Interest rate			0
Default Date			/ /
Default Interest rate			0
Property Tax			0
Community Fees			0
Other			0

	Due Date	Amount	Amount Paid	Paid Date
1st Installment	/ /	0	0	/ /
2nd Installment	/ /	0	0	/ /
3rd Installment	/ /	0	0	/ /
Final PayOut	/ /	\$ 150,000.00	0	/ /
Lot Balance		\$ 150,000.00	0	

Selling Price: The amount the customer will pay for the lot.

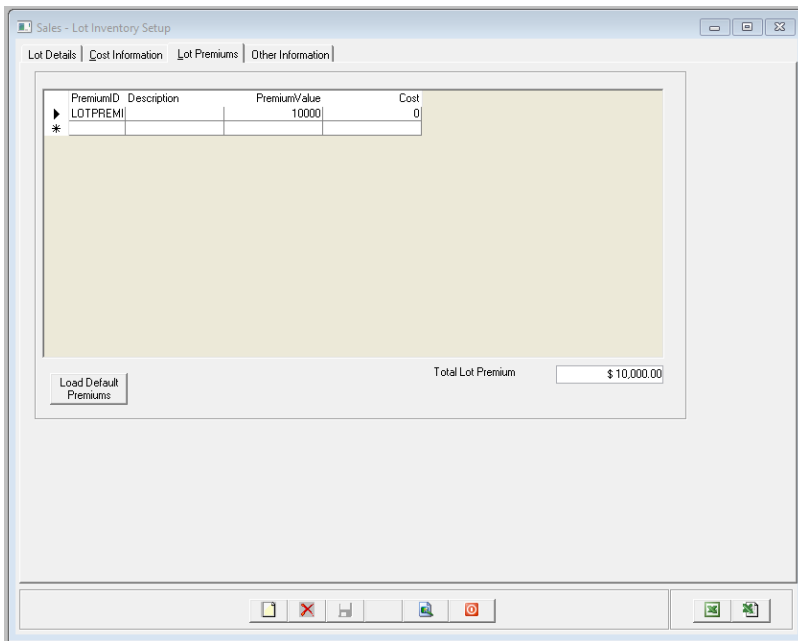

Installments/Final Payout: Record the cost of the lot.

- Enter the Due Date of each installment payment
- Enter the Amount of each installment payment
- If the lot will be paid out without installments, enter the entire cost in Final Payout
- Enter the amount paid and actual paid date for each installment in Amount Paid and Paid Date fields respectively

Cost and Lot Balance will be calculated by HomeFront Profit Builder

Click **SAVE**

3. **Lot Premiums:** Lot Premiums record additional pricing for features that add additional value. *Lot Premiums are created in Profit/Setup/Lot Premium Master*

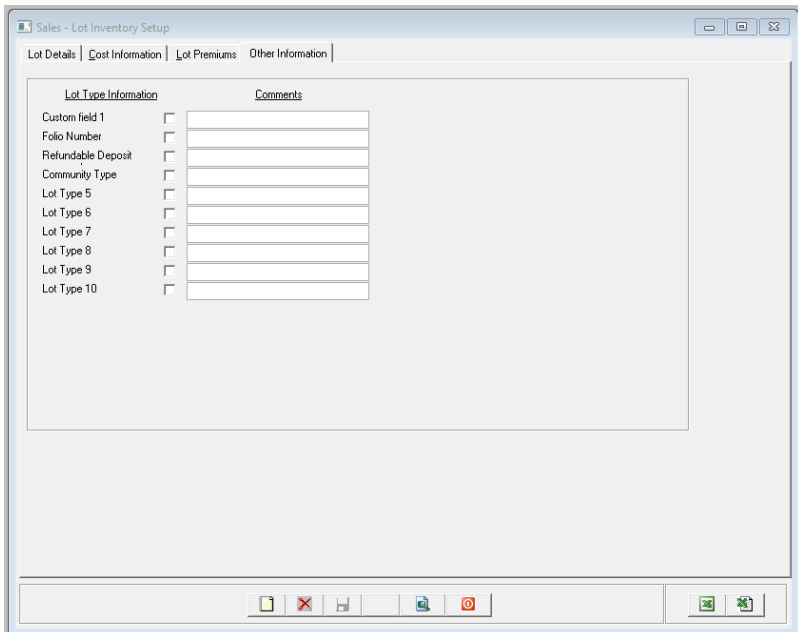

PremiumID	Description	PremiumValue	Cost
LOTPREMI		10000	0

Load Default Premiums

Total Lot Premium \$10,000.00

4. **Other Information:** can be used to record any information specific to the lot.

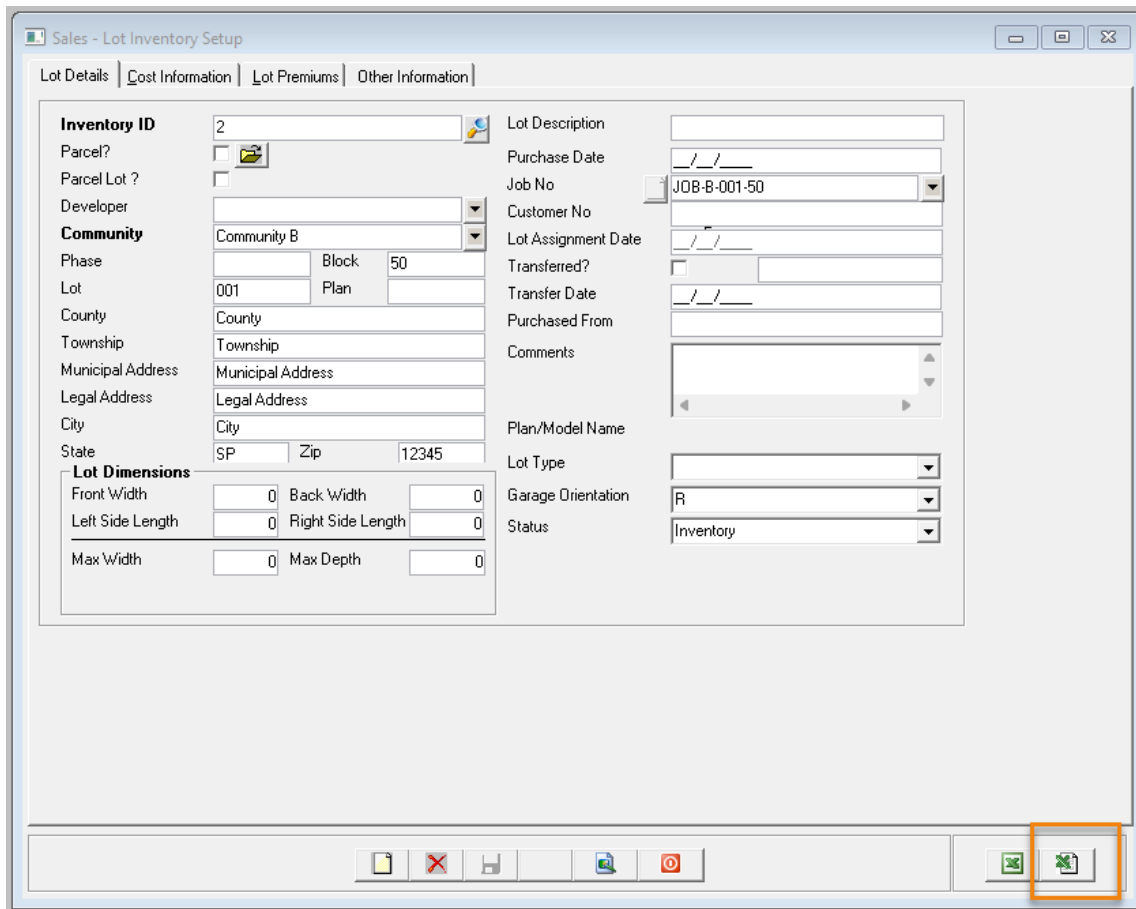

Lot Type Information	Comments
Custom field 1 ☐	
Folio Number ☐	
Refundable Deposit ☐	
Community Type ☐	
Lot Type 5 ☐	
Lot Type 6 ☐	
Lot Type 7 ☐	
Lot Type 8 ☐	
Lot Type 9 ☐	
Lot Type 10 ☐	

5.4 Excel Export/Import Process

Lot records can also be created by importing into Profit builder via an Excel Spreadsheet. An export of Lot records out of Profit Builder is created and the exported Excel Spreadsheet will be used as a template to import new Lot records or modifications. This simplifies the tasks of adding new lots and modifying existing lots.

5.4.1 Creating a Lot Inventory Export

With the lot record window open, select the Export to Excel icon.

Sales - Lot Inventory Setup

4											
5											

Make the desired changes or add new Lots and save the Excel Spreadsheet. The spreadsheet is now ready to be imported back into Profit Builder.

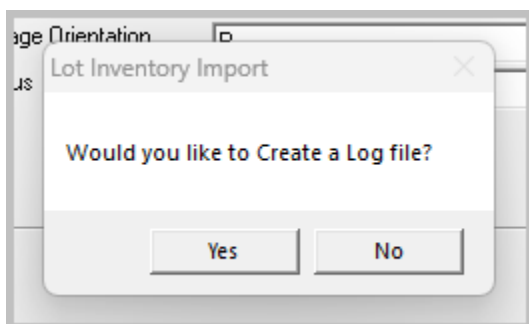

- The Lot_No field on the spreadsheet is NOT Lot Number. It is the Inventory ID. This column can be left BLANK for imports.
- Do not change any of the column names.
- Columns can be moved, but NOT deleted.
- Ensure the export is closed prior to importing.

5.4.1 Importing a Lot Inventory spreadsheet

With the lot record window open, select the Import from Excel icon and select the sheet to import. The Sales Import Data dialog box will open. Click Save Data

If there is an error in the import Spreadsheet the following dialog will appear after you click Save Data

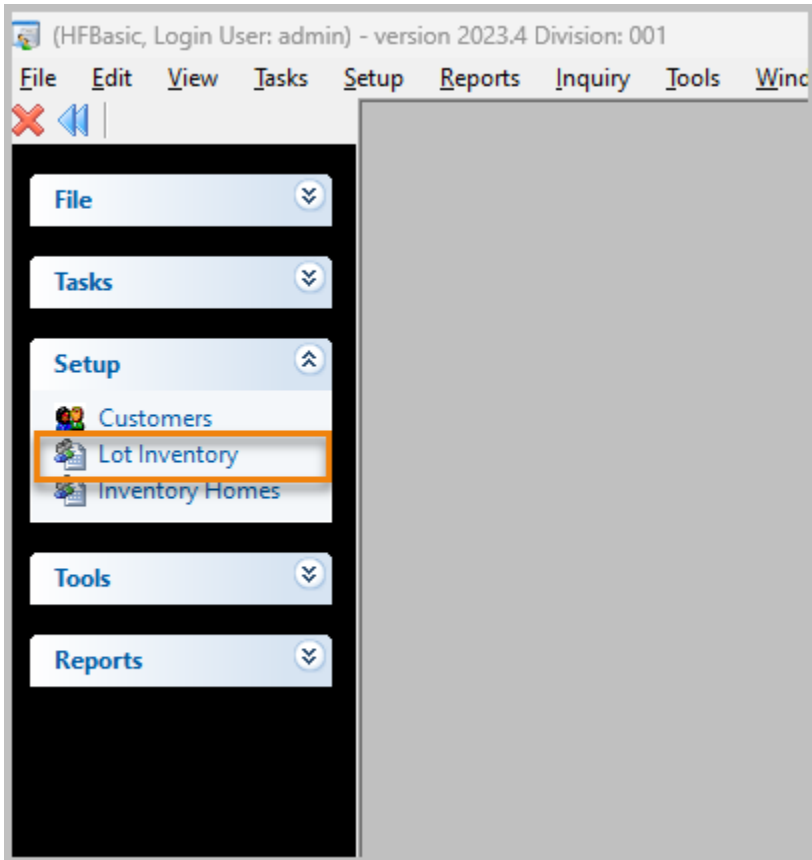

Click Yes on the log file to see the Error log file. Resolve the errors before saving imports again.

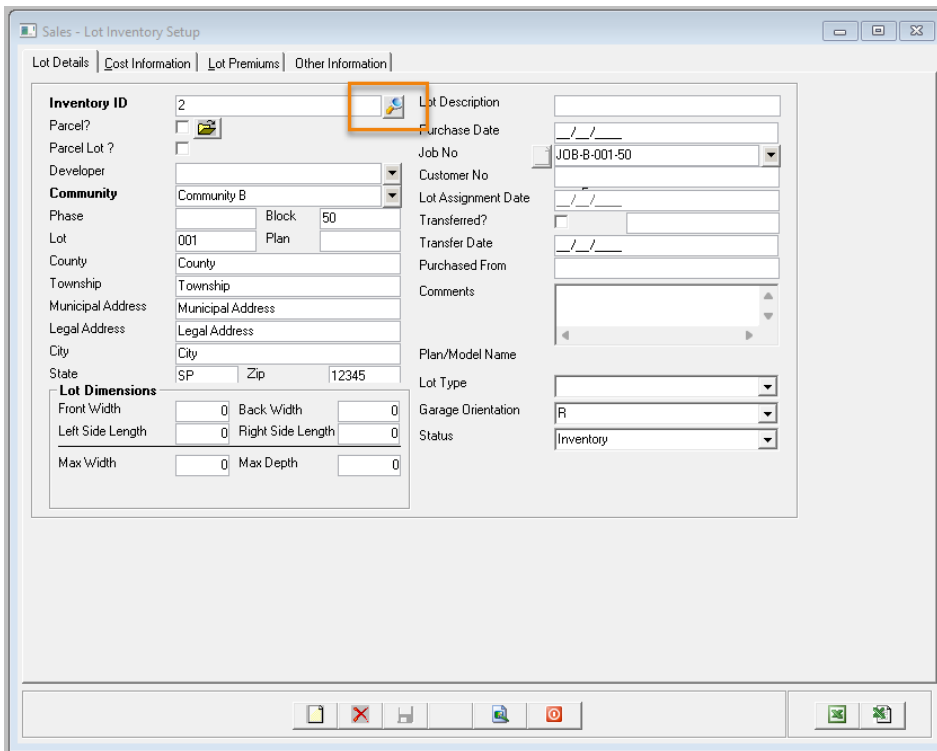

5.5 Modifying/Updating Lot Inventory Data in Profit

Profit/Lot Inventory

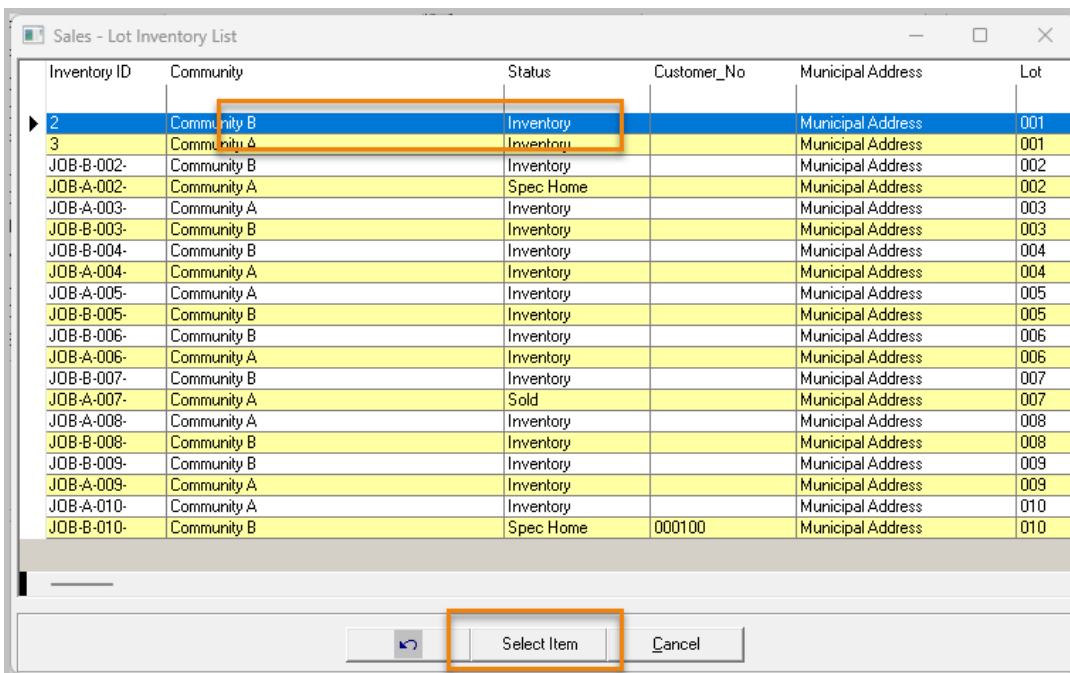

Use the Search icon to select from the list of lot inventory:

The 'Sales - Lot Inventory Setup' window displays various fields for lot details. A search icon (magnifying glass) is highlighted in the top left corner of the 'Inventory ID' field.

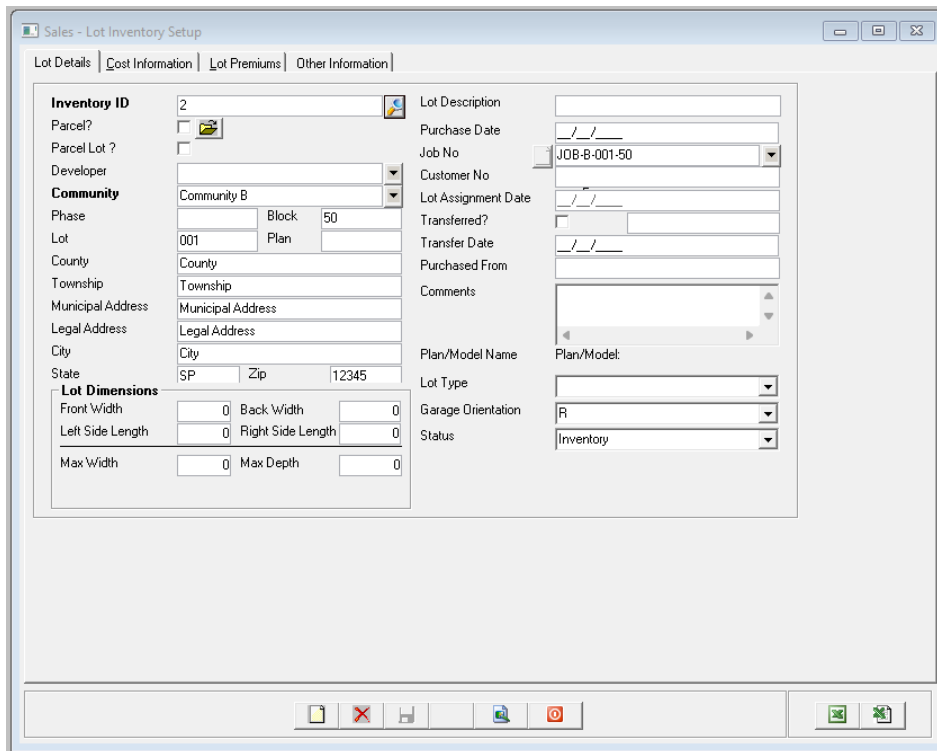

Select the job to be modified by double clicking on the applicable row or pressing the select item button.

The 'Sales - Lot Inventory List' window displays a table of lot inventory. The table has columns: Inventory ID, Community, Status, Customer_No, Municipal Address, and Lot. The first two rows are highlighted in blue, and the rest are yellow. A search icon is highlighted in the top left corner of the 'Inventory ID' field. At the bottom, there is a 'Select Item' button highlighted with an orange box.

Inventory ID	Community	Status	Customer_No	Municipal Address	Lot
2	Community B	Inventory		Municipal Address	001
3	Community A	Inventory		Municipal Address	001
JOB-B-002-	Community B	Inventory		Municipal Address	002
JOB-A-002-	Community A	Spec Home		Municipal Address	002
JOB-A-003-	Community A	Inventory		Municipal Address	003
JOB-B-003-	Community B	Inventory		Municipal Address	003
JOB-B-004-	Community B	Inventory		Municipal Address	004
JOB-A-004-	Community A	Inventory		Municipal Address	004
JOB-A-005-	Community A	Inventory		Municipal Address	005
JOB-B-005-	Community B	Inventory		Municipal Address	005
JOB-B-006-	Community B	Inventory		Municipal Address	006
JOB-A-006-	Community A	Inventory		Municipal Address	006
JOB-B-007-	Community B	Inventory		Municipal Address	007
JOB-A-007-	Community A	Sold		Municipal Address	007
JOB-A-008-	Community A	Inventory		Municipal Address	008
JOB-B-008-	Community B	Inventory		Municipal Address	008
JOB-B-009-	Community B	Inventory		Municipal Address	009
JOB-A-009-	Community A	Inventory		Municipal Address	009
JOB-A-010-	Community A	Inventory		Municipal Address	010
JOB-B-010-	Community B	Spec Home	000100	Municipal Address	010

The chosen lot record will open:

Edit applicable fields, click out of the last edited field to enable the **SAVE** icon.
Updated data will be reflected in the Customer record in Profit and in HFS after the next transfer.

To send the updated address information to BuildPro, resend the Job from Precision Builder.

6.0 ITEM DATABASE SET UP

6.1 Job Cost Codes and Cost Categories

Job Cost Codes and Cost Categories are important for accounting purposes and will be synched with the HomeFront database after accounting integration is set up. Once they are synched, they are a required component when setting up the **item database**. Cost Codes and Categories can also be used to organize report data. Review section **6.4.1 Creating Items directly in Precision Builder** to add Job Cost Code or Category

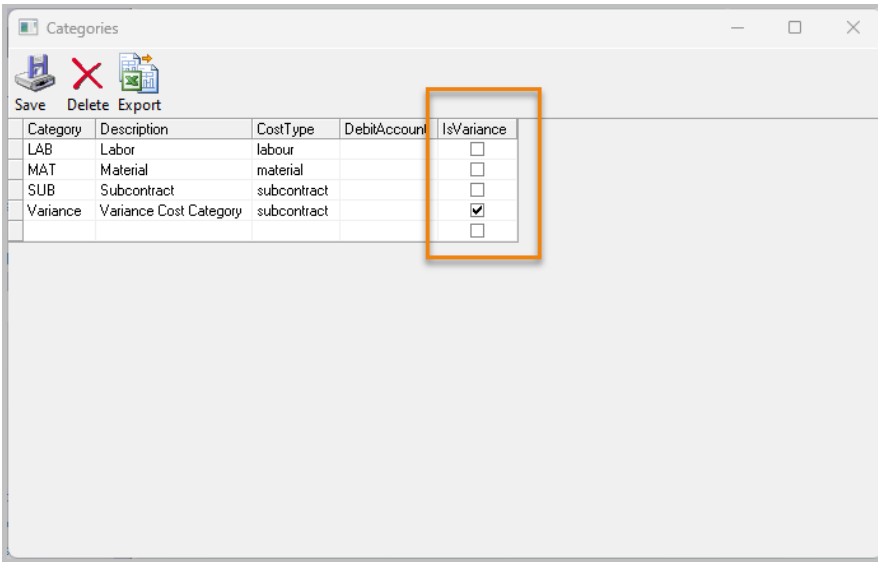

As Job Cost Codes and Cost Categories are accounting related, the way they are created is dependent on the accounting system that is integrated into Precision Builder. See section **4.4 Accounting Integration** for the applicable accounting software.

6.1.1 Creating Variance Job Cost Categories

Variance cost code categories are used when job variances apply. The variance amount can be logged under a separate category for accounting purposes.

If HomeFront is integrated with an accounting software, the Variance categories are created within accounting. Once the variance categories are visible in HomeFront, the **IsVariance** column will need to be checked:

 Precision/Set Up (Top menu)/Job Cost Categories

Category	Description	CostType	DebitAccount	IsVariance
LAB	Labor	labour		☐
MAT	Material	material		☐
SUB	Subcontract	subcontract		☐
Variance	Variance Cost Category	subcontract		☒

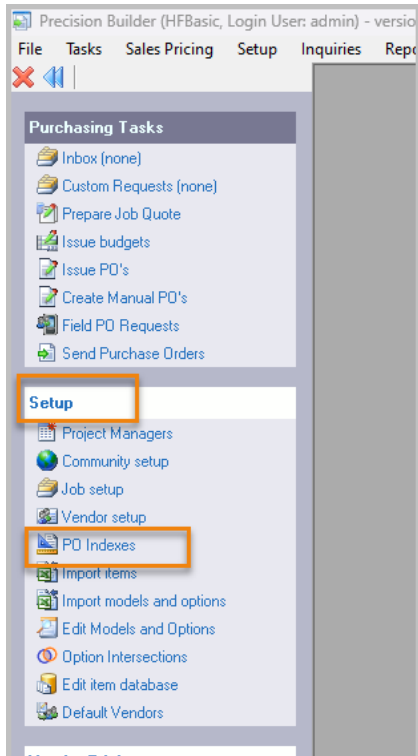

6.2 Purchase Order Index Summary

Purchase Order Indexes are values that are assigned to different types of Purchase Orders within Precision Builder. They define how items are grouped into Pay Points. When installing Precision Builder for the first time, the creation of Purchase Order Indexes is required and one of the first and foremost things to do.

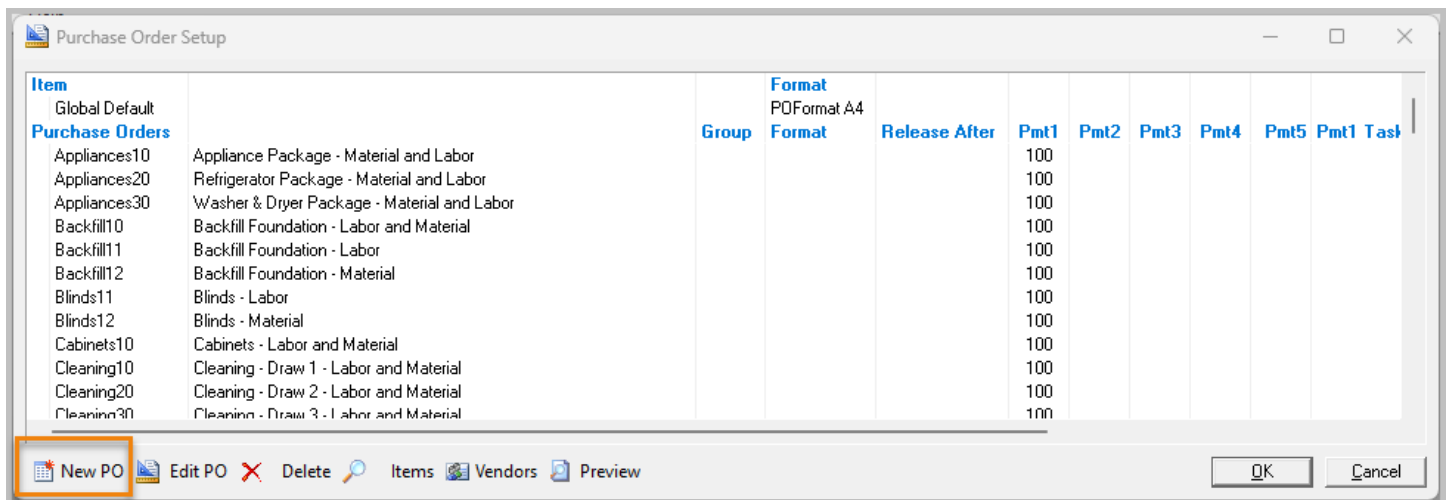

6.2.1 Creating Purchase Order Indexes

 Precision/Set Up/Purchase Order Indexes

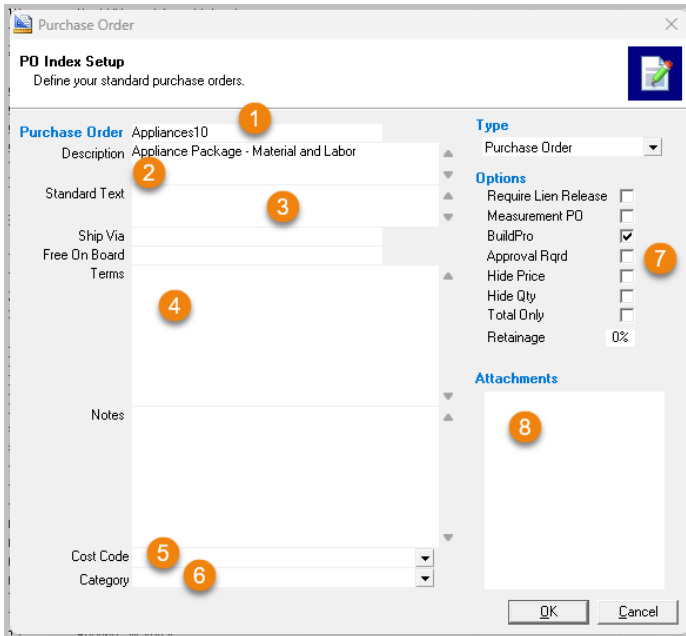

On the left **Task Panel** of **Precision Builder** open **Setup** menu and then select **PO Indexes**. Purchase Order Setup window will open.

From the **Purchase Order Setup** window choose **New PO** .

Purchase Order dialog opens and details are entered. View the figure below for example:

The screenshot shows the 'Purchase Order' dialog box. It has a title bar 'Purchase Order' and a close button. Below the title bar is a section 'PO Index Setup' with the instruction 'Define your standard purchase orders.' and a small icon of a document with a pencil. The main area is divided into several sections: 'Purchase Order' (with a field for 'Appliances10' marked with a callout 1), 'Description' (with a field for 'Appliance Package - Material and Labor' marked with a callout 2), 'Standard Text' (with a field marked with a callout 3), 'Ship Via' (with a field marked with a callout 4), 'Free On Board' (with a field marked with a callout 4), 'Terms' (with a field marked with a callout 4), 'Notes' (with a text area marked with a callout 4), 'Cost Code' (with a dropdown menu marked with a callout 5), and 'Category' (with a dropdown menu marked with a callout 6). To the right of these fields is a 'Type' dropdown menu set to 'Purchase Order'. Below that is an 'Options' section with several checkboxes: 'Require Lien Release' (unchecked), 'Measurement PO' (unchecked), 'BuildPro' (checked, marked with a callout 7), 'Approval Rqrd' (unchecked), 'Hide Price' (unchecked), 'Hide Qty' (unchecked), 'Total Only' (unchecked), and 'Retainage' (set to '0%'). Below the options is an 'Attachments' section with a field marked with a callout 8. At the bottom right are 'OK' and 'Cancel' buttons.

1. **Purchase Order:** An Alpha-Numeric entry is typed in this field to represent the created purchase order index.
2. **Description:** Enter the description of the PO Index
3. **Standard text:** appears on the PO printout.
4. **Terms:** that pertain to the PO index are entered in this field
5. **Cost Code:** is selected in this field. It's assumed that the Accounting Cost Codes and Category lists have been created already or imported from the accounting software. Selecting an Accounting Cost Code will associate all items within this PO Index to the selected Accounting Cost Code.
6. **Category:** is a further breakdown of an accounting cost code and is selected from the drop-down list in this field.
7. **Options for purchase order:** Contact Hyphen Support for more detail on these selections.
8. **Attachments:** Specify types of attachments that are to be issued with the purchase order.

****BUILDPRO INTEGRATION WILL AFFECT SETUP AND USAGE OF THE PURCHASE ORDER INDEX MENU. CONTACT HYPHEN SUPPORT OR REFERENCE THE HOMEFRONT BUILDPRO INTEGRATION SECTION****

After entering the necessary information on the Purchase Order dialog, click **OK**. The newly created Purchase Order Index will appear in the Purchase Order Setup window.

On the Purchase Order Setup window more information regarding the new PO is entered. View the figure below for example:

Purchase Order Setup						
Item	Group	Format	Release After	Pmt1	Pmt2	Pmt3
Global Default		Format A4				
Purchase Orders						
Appliances10	Appliance Package - Material and Labor			100		
Appliances20	Refrigerator Package - Material and Labor			100		
Appliances30	Washer & Dryer Package - Material and Labor			100		
Backfill10	Backfill Foundation - Labor and Material			100		
Backfill11	Backfill Foundation - Labor			100		
Backfill12	Backfill Foundation - Material			100		
Blinds11	Blinds - Labor			100		
Blinds12	Blinds - Material			100		
Cabinets10	Cabinets - Labor and Material			100		
Cleaning10	Cleaning - Draw 1 - Labor and Material			100		
Cleaning20	Cleaning - Draw 2 - Labor and Material			100		
Cleaning30	Cleaning - Draw 3 - Labor and Material			100		
Cleaning40	Cleaning - Draw 4 - Labor and Material			100		
Countertops10	Countertops - Labor and Material			100		
Deck10	Deck - Labor and Material			100		
Deck11	Deck - Labor			100		
Deck12	Deck - Material			100		
Door10	Exterior Door - Labor and Material			100		
Drywall10	Dry Wall - Hang and Finish - Labor and Material			100		
Electric10	Electric - Temp Power Installed - Labor and Material			100		

1. **Item:** If there is any missing data on any specific PO the data is derived from the Global Default Settings.
2. **Purchase Orders:** PO Index and Description is displayed in this column of the Purchase Order Set up window.
3. **Group:** Grouping of the PO's is user defined and typically used for staged releases.
4. **Format:** The layout and the content of the PO will be defined by the type of Format selected.
5. **Release After:** For Project Builder Schedule users to specify the time the PO is to be released.
6. **Format:** Global default for the Purchase Order Template

 ****BUILDPRO INTEGRATION AFFECT SETUP AND USAGE OF THE PURCHASE ORDER INDEX MENU. CONTACT HYPHEN SUPPORT OR REFERENCE THE HOMEFRONT BUILDPRO INTEGRATION SECTION****

After the purchase order index information is entered, click **OK** on the **Purchase Order Setup** window to save. To delete any PO Index, select any field along the row of the respective PO and click  shown at the bottom of the window.

 ****DELETING PO INDEXES IS NOT ADVISED AND COULD CAUSE EXTENSIVE ISSUES WITH THE BUILDPRO INTEGRATION****

6.2.2 Assigning Default Vendors to Purchase Order Indexes

In each Purchase Order Index (PO Index) a preferred vendor can be assigned as a Global Default or for each community. The Vendor assigned to the PO Index will be the default for the specified community/area. Whenever vendor information such as cost of an item is required in Precision Builder, it will be retrieved from the default vendor of a specified community (**view topic Vendor Rate Retrieval**)

Prerequisites to this task are:

1. Existing Vendor Records
2. Existing Communities
3. Existing Purchase Order Indexes

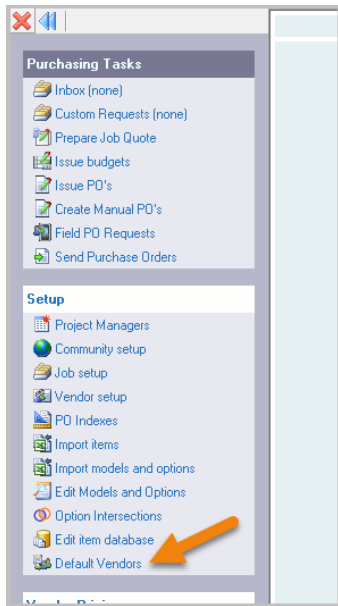

A vendor can be assigned as a Community Default and/or as Global Default. If a vendor is different in every community for each PO index, then every community must be assigned a default vendor. If the vendors for each PO index are the same in

all Communities, the vendors can be assigned as Global Default. The system will look first to the Community Default and then to the Global Default to select a vendor. (View topic Vendor Rate Retrieval).

To assign default vendors:

Precision Builder/Setup menu/Default Vendors.

The Default Vendors set up window will open:

Default Vendors			
PO Index	Global Default	Community A	Community B
1 Appliances10 App	SAMPLE Vendor		
Appliances20 Ref	SAMPLE Vendor		
Appliances30 Wa	SAMPLE Vendor		
Backfill10 Backfill			SAMPLE Vendor
Backfill11 Backfill		EXAMPLE Vendor	
Backfill12 Backfill		EXAMPLE Vendor	
Blinds11 Blinds - L	SAMPLE Vendor		
Blinds12 Blinds - R	SAMPLE Vendor		
Cabinets10 Cabin	SAMPLE Vendor		
Cleaning10 Clean	SAMPLE Vendor		
Cleaning20 Clean	SAMPLE Vendor		
Cleaning30 Clean	SAMPLE Vendor		
Cleaning40 Clean	SAMPLE Vendor		
Countertops10 Co	SAMPLE Vendor		
Deck10 Deck - L			SAMPLE Vendor
Deck11 Deck - L		EXAMPLE Vendor	
Deck12 Deck - M		EXAMPLE Vendor	
Door10 Exterior D	SAMPLE Vendor		
Drywall10 Dry Wa	SAMPLE Vendor		
Electric10 Electric	SAMPLE Vendor		
Electric20 Electric	SAMPLE Vendor		
Electric30 Electric	SAMPLE Vendor		
Excavation10 Exc	SAMPLE Vendor		
Finish10 Finish - T	SAMPLE Vendor		
Finish20 Finish - L	SAMPLE Vendor		

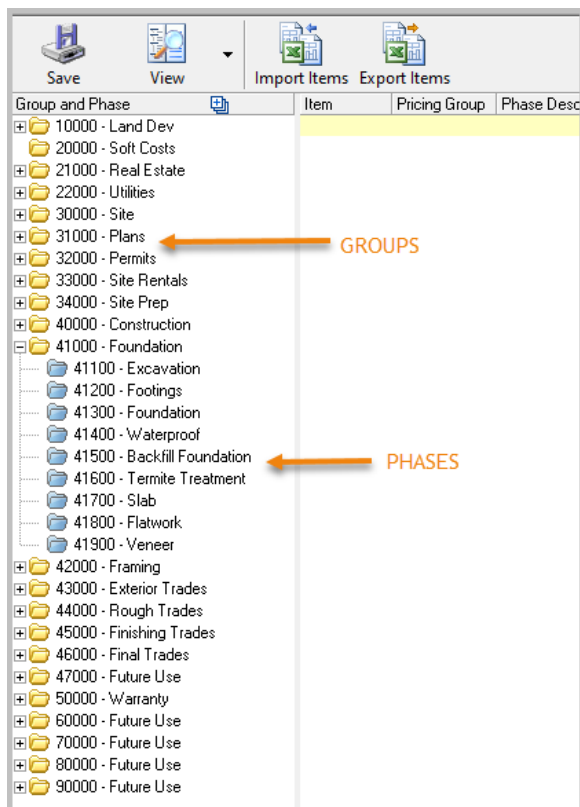

1. **PO Index:** Lists all PO indexes in the division.
2. **Global Default:** This column is required. The Global Default Vendor will be used if there is no data available in the Default Community Vendor.

3. **Community Columns:** To the right of the Global Default column, are the columns of all the communities in the database. Assign Default Vendors to each of the Communities if they are different from the Global Default
To select a vendor for a PO Index, double click on an empty field and choose from the pick list.

6.3 Item Groups and Phases Summary

Item **Groups** and **Phases** are important for sorting and categorizing items in the database and are user defined. A **Group** could categorize items that belong to a specific stage of construction or belong to a specific scope of work. A **Phase** is a sub-category of a Group therefore Phases in the same Group are related.

The numbering of the Groups and Phases should be consistent. If the setup is five figures for the numbering, continue using five figures. If the numbering for two different Groups is 1000 and 100, the system will recognize them as belonging to one group therefore to differentiate them, write 1000 and 0100. The same applies to Phase numbering.

6.3.1 Creating a Group within Precision Builder

Precision/Set Up/Edit Item Database

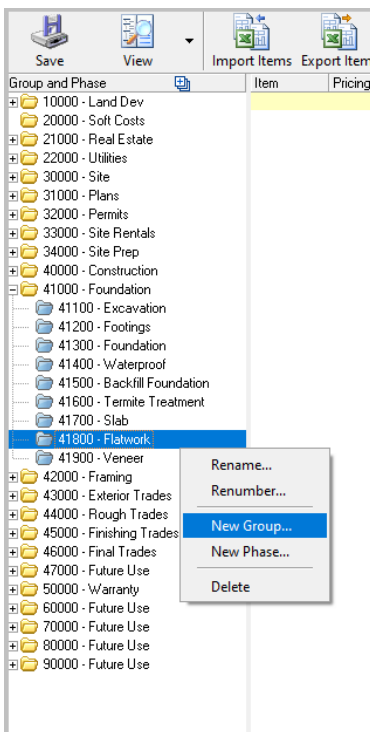

On the **Task Panel** situated on the left of the **Precision Builder** home screen, expand the **Setup** menu. Select **Edit Item Database**. The Item Database window will open.

Or

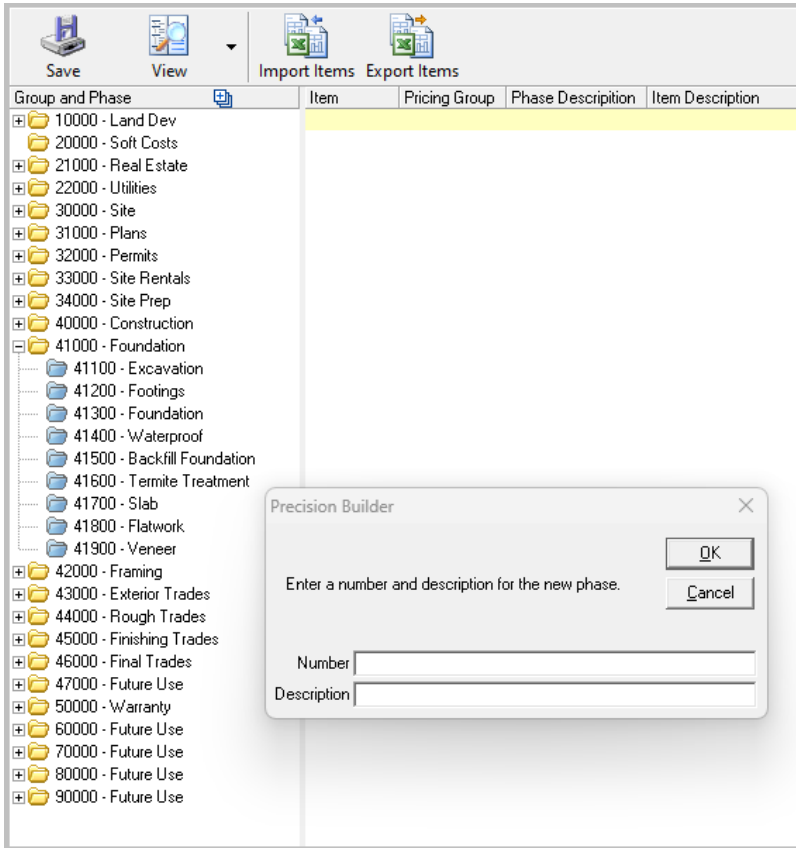

Click on the **Workflow window** in **Precision Builder**. The Item Database window will open.

Right click anywhere on the left pane of the Item Database window. An option menu will appear. Select **New Group**. View the figure below for example:

After selecting **New Group**, the following dialog will appear. Enter Group **Number** and **Description** in the respective Fields.

Click **OK** on the dialog to save.

The newly created **Group** will appear on the left pane (grid) of the Item Database window.

6.3.2 Creating a Phase within Precision Builder

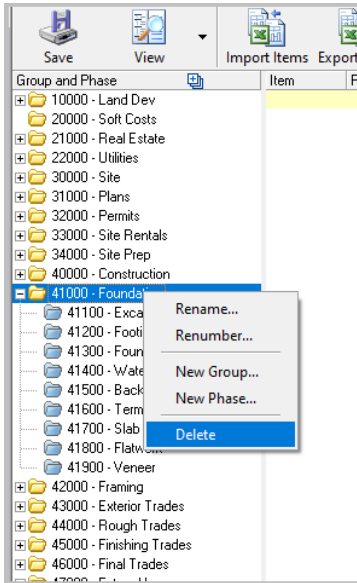

Now that a Group has been created the following steps describe how to create a Phase. (a subfolder within the Group)

Right click on the newly created Group. An option menu will appear. Select **New Phase**. A dialog will appear. Enter the **Phase Number** and **Description** in the respective fields.

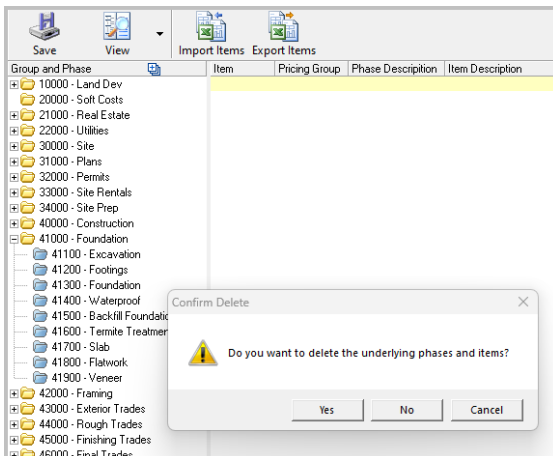

Click **OK** on the dialog to save. Once completed, these Groups and Phases will contain all items that will form a pay point on purchase orders.

6.3.3 Deleting a Group or Phase within Precision Builder

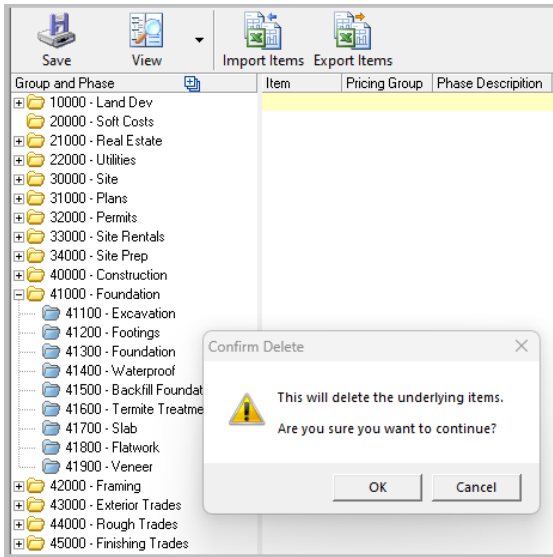

On the Item Database window right click on the respective Group or Phase.

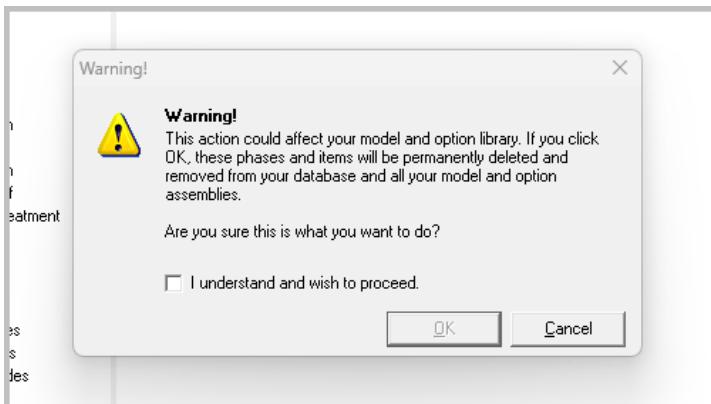

An option menu will open and from it select Delete. The following warnings will appear.
Deleting a Group:

Deleting a Phase:

If OK has been selected for Deleting a Group, another warning will appear to complete this task:

 ***It is NOT recommended to DELETE Groups and/or Phases once assemblies have been built utilizing the Estimating Item Database.***

6.4 Creating the Items for the Item Database

Items created within the Item Database will be selected to build assemblies. Items within the assembly can form Purchase Orders or be used for budget placeholders.

6.4.1 Creating items directly in Precision Builder

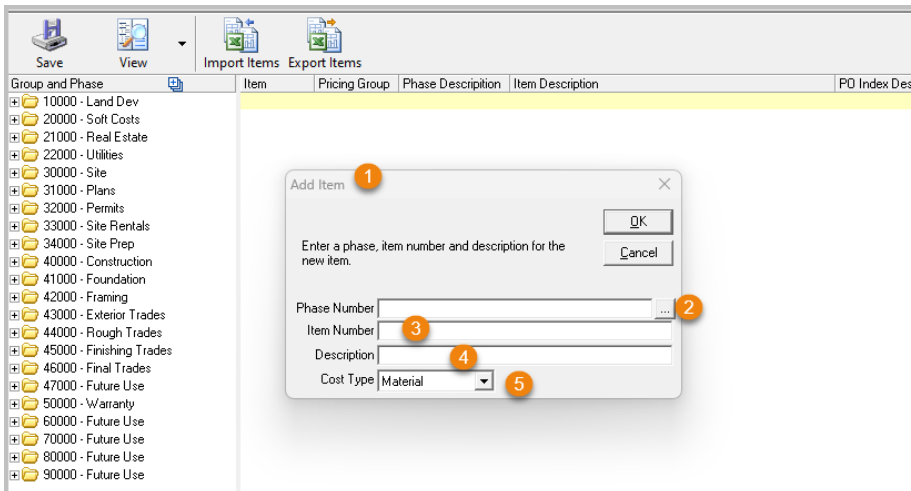

On the left Task Panel of Precision Builder open **Setup** menu and select **Edit Item Database**.

or

Click on the Workflow window of Precision Builder.

Right click anywhere on the right pane (grid) of the Item Database window. An option menu will appear. Select New Item and the Add Item box will appear:

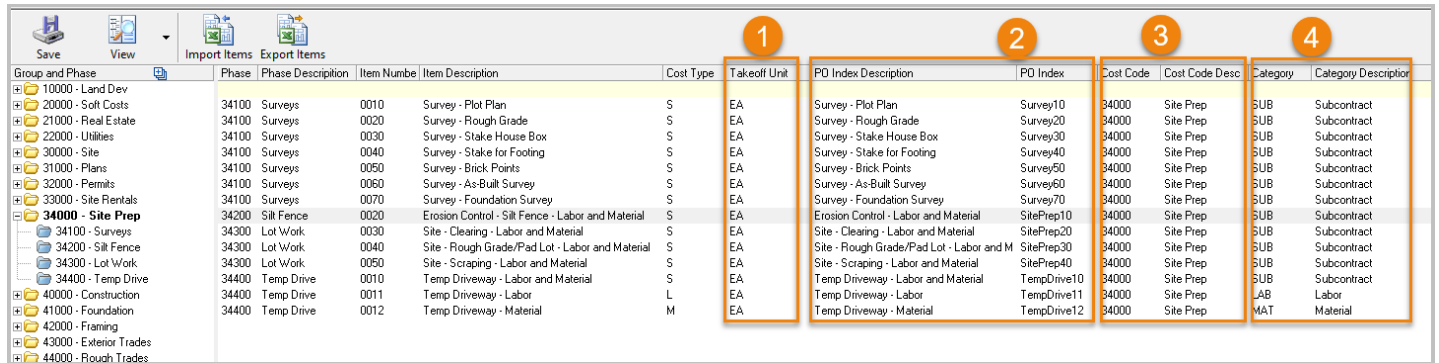

1. After the **New Item** menu has been selected, the **Add Item** dialog will open.
 2. Click the ellipsis button in the **Phase** field to assign a **Phase** for the new item.
 3. Enter an **Item Number**
 4. Enter the **Item description**.
 5. Enter the **cost type**. This is the Estimating cost type. (The JC Category will define the accounting cost type)
- After entering the information about the new item in the **Add Item** dialog, Click OK to save the item. The **Add Item** dialog will close automatically.

Note: When an item is created on the Add Item dialog the Phase is required.

Upon saving the newly created item, the item will display in the right pane (grid) of the Item Database window within the phase designated in the **Add Item** dialog. To view items within a particular Group or Phase, double click on the folder name in the left grid and the items will display in the right grid.

When the item is on display on the right pane of the Item Database window, add additional mandatory information to the newly created item.

Group and Phase	Phase	Phase Description	Item Number	Item Description	Cost Type	Takeoff Unit	PO Index Description	PO Index	Cost Code	Cost Code Desc	Category	Category Description
10000 - Land Dev

1. **Takeoff Unit of Measure:** User Defined for all items. Typing a new takeoff unit on the applicable cell will add it to the list.
2. **Po Index:** Choose using drop down list from created PO Index list.
3. **Cost Code (Accounting Cost Code):** Choose using drop down list from synched accounting platform.
4. **Category (Accounting Cost Category):** Choose using drop down list from synched accounting platform.

6.4.2 Import items into the Item Database using an Excel Spreadsheet

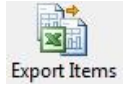

Click **Item DB** on the **Workflow** window of **Precision Builder**. The **Item Database** window will open, with the left pane displaying the **Groups** and **Phases** that have been created.

If no items, Groups or Phases have ever been created in Precision Builder then at least one of each must first be created to generate the export worksheet.

After creating at least one Group and one Phase, then create an item. To create an item follow the steps in topic: **Creating items directly in Precision Builder**

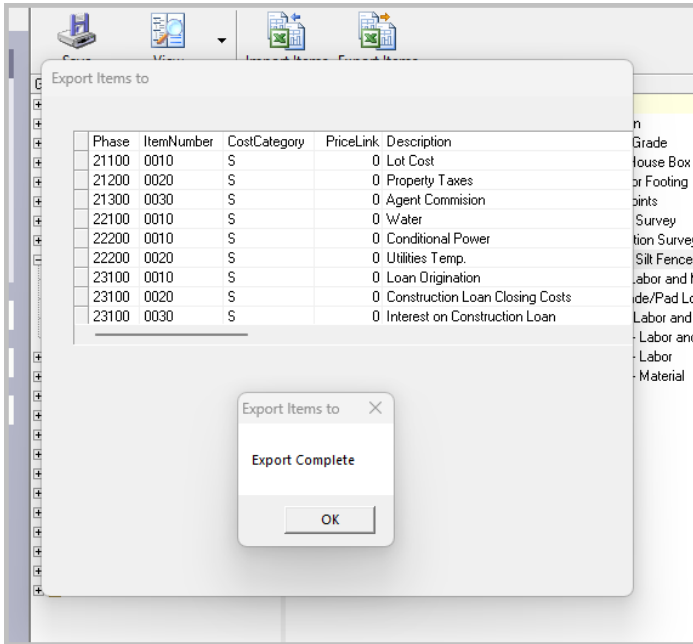

Note: In this process, the user exports a spreadsheet from Precision Builder to an external location on a workstation. The spreadsheet will contain all the items that exist in the Item Database (If it is a new installation of Precision Builder the spreadsheet will only contain the item that was created directly in precision). The spreadsheet will be used as a template for importing Items into Precision Builder.

Click the **Export Items** at the top of the **Item Database** window. Export Items to dialog is displayed.

In the “**Export Items to**” dialog, create a name for the spreadsheet in the File name field and choose a location to save the spreadsheet.

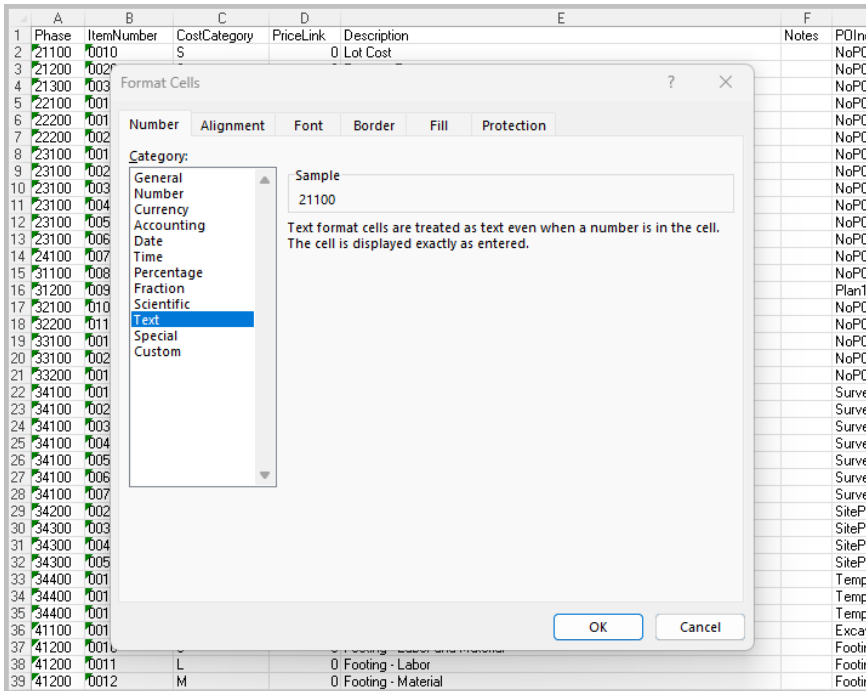

Once the Export has completed, the following windows will appear:

Choose **OK**.

Minimize Precision Builder and open the spreadsheet from the saved location. The spreadsheet will look like the one displayed below.

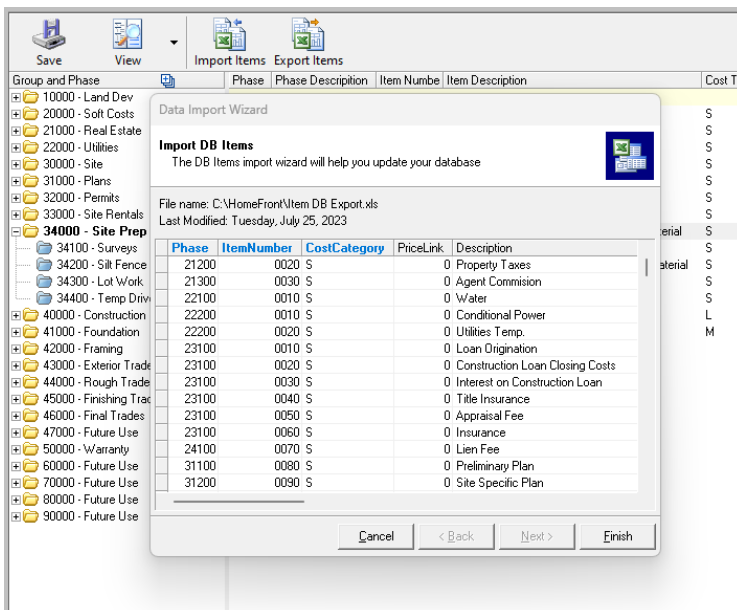

In the exported spreadsheet, the user can set **Phase and Item Number** columns to **Text Format to use leading zeros** if required.

Enter information of other items that are to be imported into Precision Builder. After entering the information of all new items, save the spreadsheet in the same external location and close the spreadsheet.

Return to Precision Builder and click **Import Items** at the top of the **Item Database** window. An Open dialog will be displayed. From the Open dialog select the location for the saved spreadsheet and click Open. A Data Import Wizard will be displayed. View the figure below for example:

Click **Finish** on the **Data Import Wizard**. The items will be saved in Precision Builder. To view the imported items double click on the respective Phase(s). The items will appear on the right pane of the Item Database window.

When the item is on display in the right pane (grid) of the Item Database window, additional information can be added to the newly created item.

Click **Save** at the top of the **Item Database** window to save the items.

6.4.3 Item Database Fields and their functions

Field	Data Type	Purpose or Function	Examples/Scenarios
Phase	Selected	A group of estimating items. Items of the same phase are related	
Item Number	Manual Entry	Identification number of item within the phase	
Item Description	Manual Entry	To describe the item.	Concrete Block
Item	Assigned	Concatenation of item number and cost type	
Cost Type	Selected		
Takeoff Unit of Measure	Manual Entry upon creation/Selected	To identify the unit of measure that is used whenever specifying the quantity used for ordering purposes	BG, BOX, EA, Each, FT, LF, PC, RL, SF
Order Unit of Measure	Manual Entry upon creation/Selected	To identify the unit of measure that is used whenever specifying the quantity used for ordering purposes. This may differ from the Takeoff UOM	BG, BOX, EA, Each, FT, LF, PC, RL, SF
Waste Percentage	Manual Entry	Use when calculating order quantities during estimating takeoffs. Takeoff quantities will be multiplied by the waste percentage to arrive at the order quantity. Rounding direction and rounding values will affect the calculation of order quantities as well.	
Item Conversion Factor	Manual Entry	To calculate both order quantities and takeoff quantities. When inputting a takeoff quantity, the conversion factor will automatically calculate the order unit required. Note: This is a required field and on this field the value must be a 1 if both the takeoff unit of measure and order unit of measure are the same.	BG, BOX, EA, Each, FT, LF, PC, RL, SF
Rounding Direction	Column	Specifies how order quantities should be rounded. The number being rounded to is specified in the Round to field. Valid values are: To closest (identified as 2), Up to nearest (identified as 1), Down to nearest (identified as 3), and None (identified as 0).	Round up to the nearest whole number.

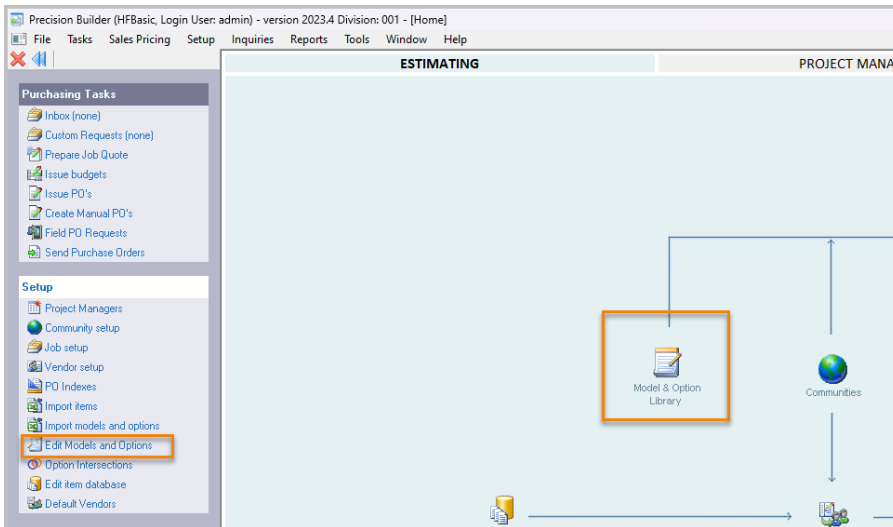

Round to	Column	Used in conjunction with the rounding direction. This field specifies the value being rounded to. The number being rounded to, is what is specified in the Round to field.	It may not be possible to order a fractional quantity of an item; this will enable the system to round up to the nearest whole number.
PO Index (Purchase Order Index)	Selected	To reference which PO the item will be included on if used on a job	010 Drafting
PO Index Description	Selected	Extended Description to reference which PO the item will be included on if used on a job	
Job Cost Code and Job Cost Description	Synched from accounting and selected	To specify the default job cost code that the item relates to. This code is used when posting both budgets and purchase orders to the accounting platform	
Job Cost Category and Job Cost Category Description	Synched from accounting and selected	To specify the default cost type that the item relates to. This code is used when posting both budgets and purchase orders to the accounting platform.	Material (M), Subcontractor (S), Labor (L), Equipment (E), Other (O)
AltJCCostCode and AltJCCostCode Description	Synched from accounting and selected	Used to specify a different cost code for Job costing purposes. This feature is controlled in the Application Options under Purchasing Options.	Can be utilized on all option assemblies, or just on change orders.
AltJCCategory and AltJCCategory Description	Synched from accounting and selected	Used to specify a different category for Job costing purposes. This feature is controlled in the Application Options under Purchasing Options.	Can be utilized on all option assemblies, or just on change orders.
Notes	Manual Entry.	To provide additional comments on an item. Notes will add to the "Notes" line-item detail in assemblies and in the "comments" estimate detail line whenever the item is inserted into a job or purchase order and integrate with BP	
Pricing Group	Set Up Required	See Section 9.1 Price Link	
Tax Group	Synched from accounting and selected	(Optional) To specify a default sales tax that applies to the item.	
Part Number	Synched from External package	Used to identify the item within external CAD packages such as SoftPlan	
Formula	Set Up Required	Used to create a takeoff formula that will allow users to calculate takeoff	

		quantities when adding items to a job or an assembly.	
Inverse Item	Selected	Substitutes an item for its inverse when flagged in an assembly	Right/Left Doors
Quote	Toggle	Used to identify whether the item is usually used as a quoted item where the value of the item will be different based on which assemblies it's used in.	
FieldPO	Toggle	Used to identify whether the item should be available within the field purchasing system as an item user can pick from when creating field po's <i>**Cannot be used with BuildPro**</i>	
Option ID Ω	N/A	Not in use	
Opt Category Ω	N/A	Not in use	
Color Ω	N/A	Not in use	
Location	Manual Entry	Used to specify a default location that the item should be assigned to. Will populate in assembly but does not integrate to BP	
Cost Price	Manual Entry	Item DB Price level. Most broad of pricing hierarchy	
Price	Manual Entry	To store a global price for the item, that will be used only if a vendor specific price not specified.	
Retail Price Ω	N/A	Not in Use	
Bid Item Ω	N/A	Not in Use	

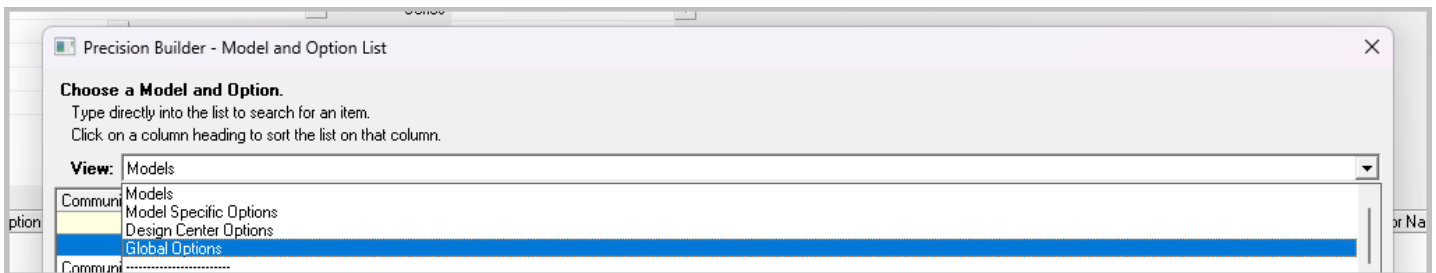

7.0 MODEL AND OPTIONS ASSEMBLIES

7.1 Model and Option Assembly menu navigation and summary

The Assembly library is available through the workflow as well as the Task Bar menu:

Once selected, the pick list allows the following selection:

Models: in most cases these are base plans

Model Specific Options: specific to models only

Design Center Option: exclusive to the Design center process

Global Options: applicable to all models within one or many communities

Model and Option Assemblies are the next most important entities to be created in Precision Builder after the creation of the **Item Database**. Model and Option Assemblies are estimates of different products, using the items from the Estimating Item Database.

Model and Option Assemblies can be created in Precision Builder two ways:

1. Created with items from the Item Database of Precision Builder
2. Through an assembly template within Precision Builder

Prerequisites to this task are:

1. Vendors, Cost Codes and Categories synched from the accounting system.
2. Communities created
3. Groups and Phases created
4. Items Database created
5. PO Indexes created
6. Default Vendors assigned to PO Indexes for every Community

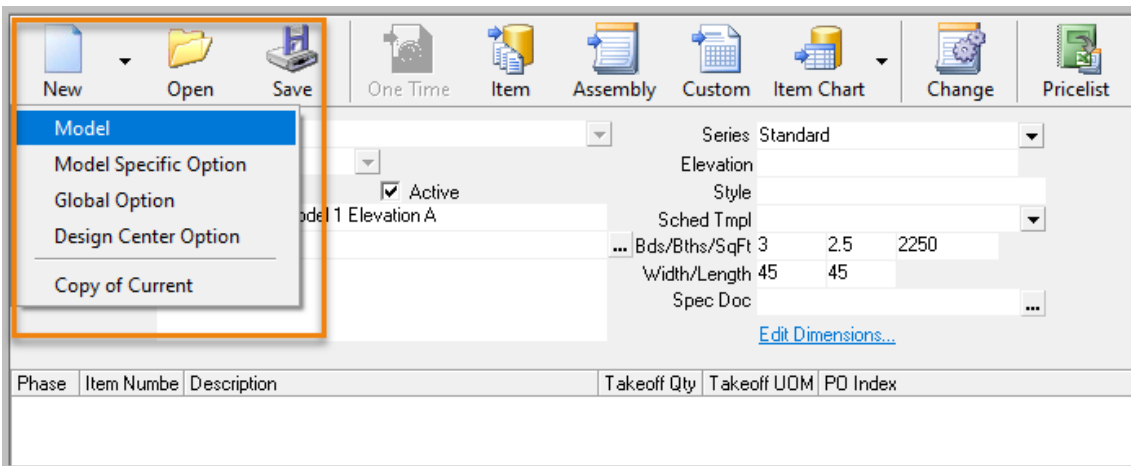

7.2 Creating Model and Option Assemblies using the Item Database

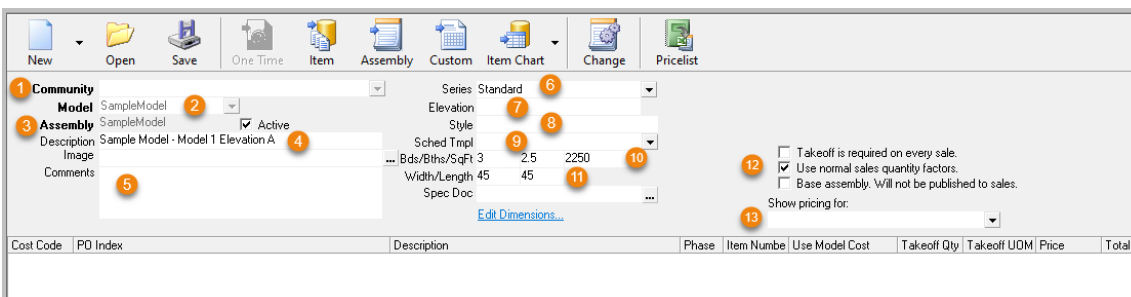

Click **Model & Option Library** on the **Workflow** window of **Precision Builder**. The **Model and Option Library** window and the **Model and Option List** dialog open simultaneously.

Close **Model and Option List** dialog if not choosing an existing assembly. Only the **Model and Option Library** window will remain open.

Choose the **NEW** icon from the top toolbar followed by the assembly type selection:

7.2.1 Creating a Model Assembly Header Record

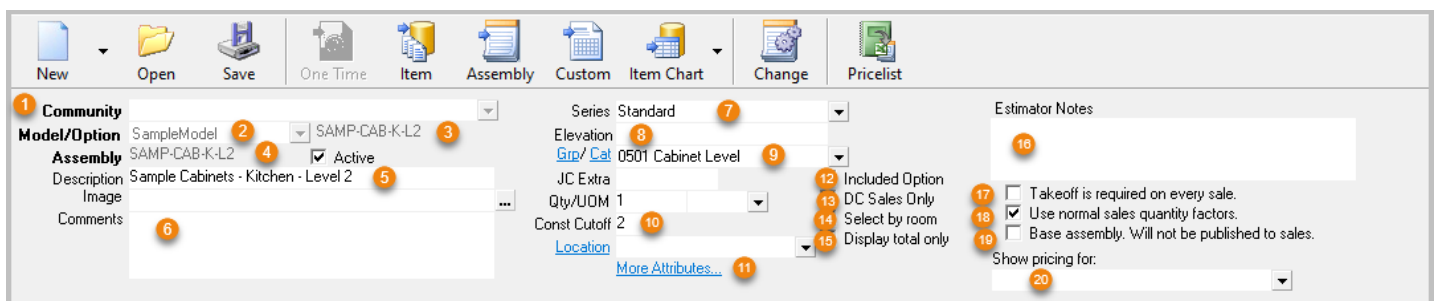

1. **Community:** Leave this field blank if the model is available to be published in any community or enter the name of the community that the model is going to be available to.
2. **Model (required):** Enter the **Model ID** in this field. A naming convention should be created and followed for Model names. Do not use special characters in this field; value cannot be edited once saved.
3. **Assembly (required):** By Default, the Model ID will copy into the Assembly field. Do not use special characters in this field; value cannot be edited once saved.
4. **Description (required):** Enter an extended description of the model in this field. This can be edited at any time and will display in HomeFront Sales.
5. **Comments:** Any comments entered in this field will be visible by Sales components (Profit/HFS). This can be edited at any time.
6. **Series (required):** Standard is default. User Defined additional dimension for assembly to signify specification level of product. (New or additional Series can be set up in the Profit Builder module)
7. **Elevation: DO NOT USE**
8. **Style:** User Defined; optional dimension for further Model description. Will display in HomeFront Sales
9. **Schedule Template:** Default BuildPro schedule. This is recommended be set at the Lot level but can be set in the assembly master.
10. **Bds/Bths/SqFt:** User Defined, optional information. Will display in HomeFront Sales
11. **Width/Length:** Model dimensions, User Defined, optional. Will display in HomeFront Sales
12. **Use Normal sales quantity factors:** This field is on by default. **Take off is required on every sale** will remove all take off quantities when this assembly is sold.
13. **Show Pricing For:** Using the drop down, a community can be chosen to populate community pricing and default vendors. This field is used after vendor pricing and items have been added to the assemblies.

After entering the necessary information in the header area, click **Save** above the header. The **Community**, **ModelID** and **AssemblyID** fields will lock and cannot be edited.

7.2.2 Creating a Model Specific Option Assembly Header Record

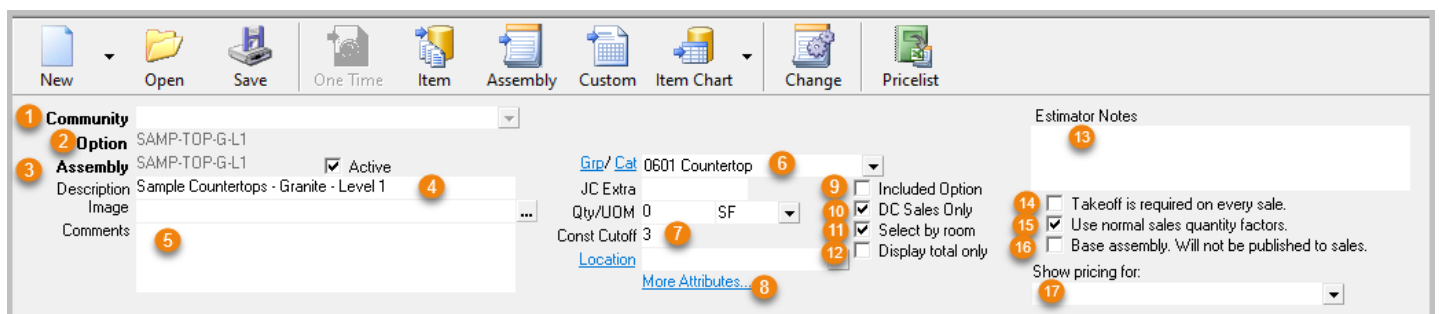

1. **Community:** Leave this field blank if the model option is available to be published in any community or enter the name of the community that the model option is going to be available to. This field should match how the applicable model is set up.
2. **Model (required):** Choose the **Model ID** in this field using the drop down.
3. **Option (required)** A naming convention should be created and followed for Model Option names. Do not use special characters in this field; value cannot be edited once save.

4. **Assembly (required):** By Default, the Model Option ID will be copied into the Assembly field. Do not use special characters in this field; value cannot be edited once saved.
5. **Description (required):** Enter an extended description of the model option in this field. This can be edited at any time and will display in HomeFront Sales.
6. **Comments:** Any comments entered in this field will be visible by Sales components (Profit/HFS). This can be edited at any time.
7. **Series (required):** Ensure the series matched the applicable Model series.
8. **Elevation: DO NOT USE**
9. **Group/Category:** User Defined; in Set Up Menu. Will sort in HomeFront Sales
10. **Construction Cut Off:** User Defined in Set Up Menu within Profit
11. **More Attributes:** User Defined in Set Up Menu. Will be selectable in HFS.
12. **Included Option:** Includes the option with the applicable Model when sold or created as an inventory Home.
13. **DC Sales Only:** When selected, will add the option to the "Design Options" section of the HFS option catalogue.
14. **Select by Room:** Only applicable to Global Options **(For additional Set Up instructions, refer to section 9.4 Rooms)**
15. **Display total only:** Only Applicable to Options with Rooms
16. **Estimator Notes:** Estimating and Purchasing notes
17. **Take off is required on every sale** will remove all take off quantities when this assembly is sold.
18. **Use Normal sales quantity factors:** This field is on by default.
19. **Base Assembly. Will not be published to sales.**
20. **Show Pricing For:** Using the drop down, a community can be chosen to populate community pricing and default vendors. This field is used after vendor pricing and items have been added to the assemblies.

After entering the necessary information in the header area, click  above the header. The **Community**, **ModelID** and **AssemblyID** fields will lock and cannot be edited.

7.2.3 Creating a Global Option Assembly Header Record

1. **Community:** Leave this field blank if the global option is available to be published in any community or enter the name of the community that the global option is going to be available to.
2. **Option (required)** A naming convention should be created and followed for Global Option names. Do not use special characters in this field; value cannot be edited once saved.
3. **Assembly (required):** By Default, the Global Option ID will copy into the Assembly field. Do not use special characters in this field; value cannot be edited once saved.

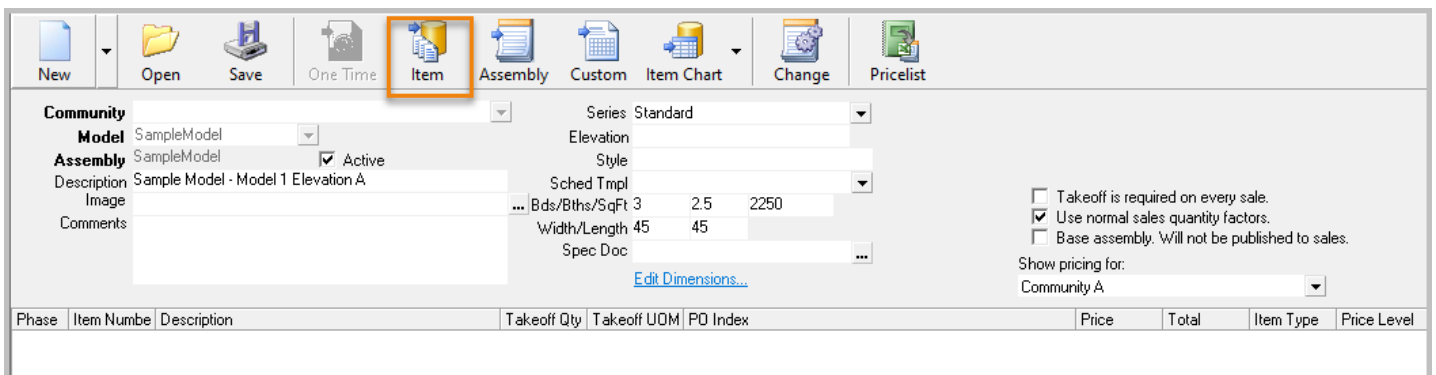

4. **Description (required):** Enter an extended description of the Global option in this field. This can be edited at any time and will display in HomeFront Sales.
5. **Comments:** Any comments entered in this field will be visible by Sales components (Profit/HFS). This can be edited at any time.
6. **Group/Category:** User Defined; in Set Up Menu. Will sort in HomeFront Sales
7. **Construction Cut Off:** User Defined in Set Up Menu within Profit
8. **More Attributes:** User Defined in Set Up Menu. Will be selectable in HFS.
9. **Included Option:** Includes the option with the applicable Model when sold or created as an inventory Home.
10. **DC Sales Only:** When selected, will add the option to the "Design Options" section of the HFS option catalogue.
11. **Select by Room:** Trigger for Rooms set up. **(For additional Set Up instructions, refer to section 9.4 Rooms)**
12. **Display total only:** Only Applicable to Options with Rooms
13. **Estimator Notes:** Estimating and Purchasing notes
14. **Take off is required on every sale** will remove all take off quantities when this assembly is sold.
15. **Use Normal sales quantity factors:** This field is on by default.
16. **Base Assembly. Will not be published to sales.**
17. **Show Pricing For:** Using the drop down, a community can be chosen to populate community pricing and default vendors.

After entering the necessary information in the header area, click  above the header. The **Community, ModelID** and **AssemblyID** fields will lock and cannot be edited.

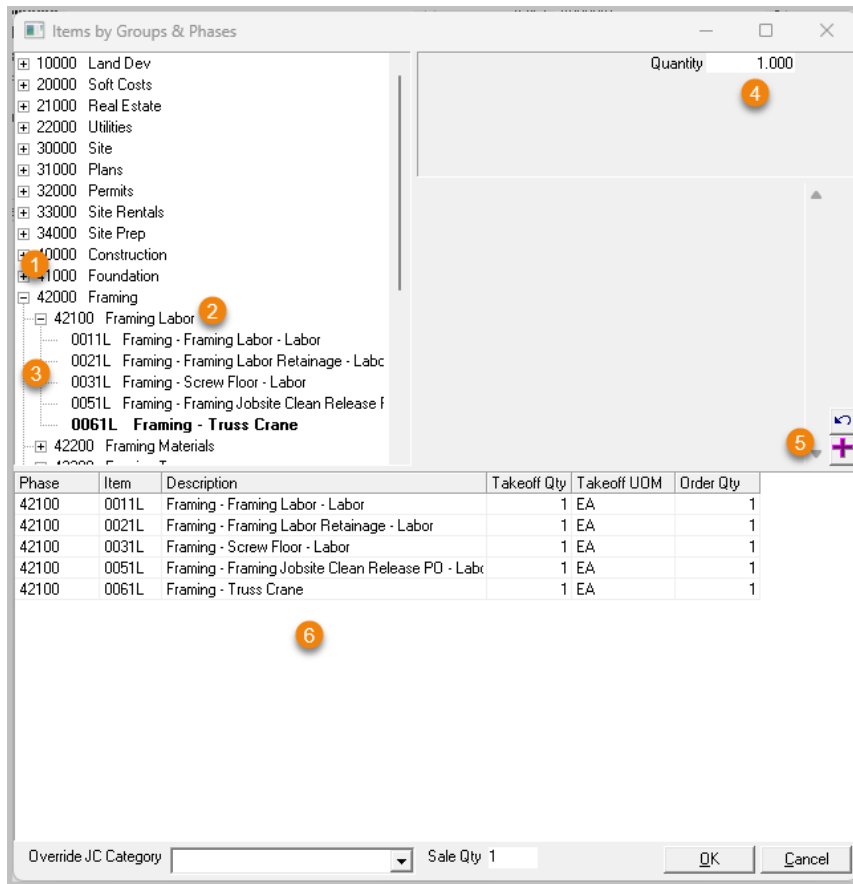

7.2.4 Adding Items to Assemblies

With the assembly open, select the Item icon in the top toolbar:

Phase	Item Number	Description	Takeoff Qty	Takeoff UOM	PO Index	Price	Total	Item Type	Price Level

The item database picklist will appear:

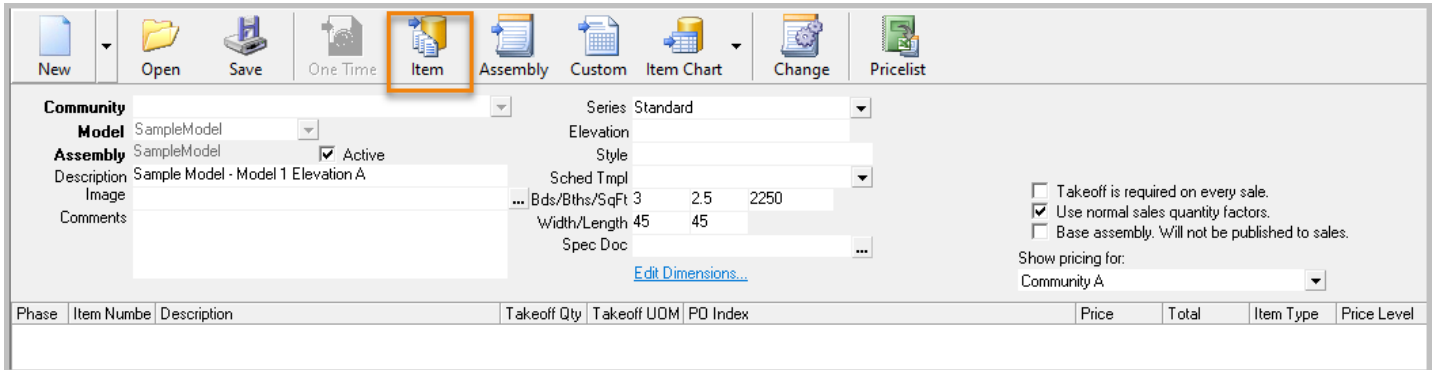

1. Expand the **Group**
2. Expand the **Phase**
3. **Double click** on any items to be added to the assembly. Chosen items will appear in the bottom pane.
4. **Quantity**: sets the quantity increments. The default is set to 1 therefore the takeoff quantity will increase by 1.
5. **Add Pass**: Click to increase the Takeoff Qty and Order Qty by 1 in the bottom pane.
6. View of selected item list.

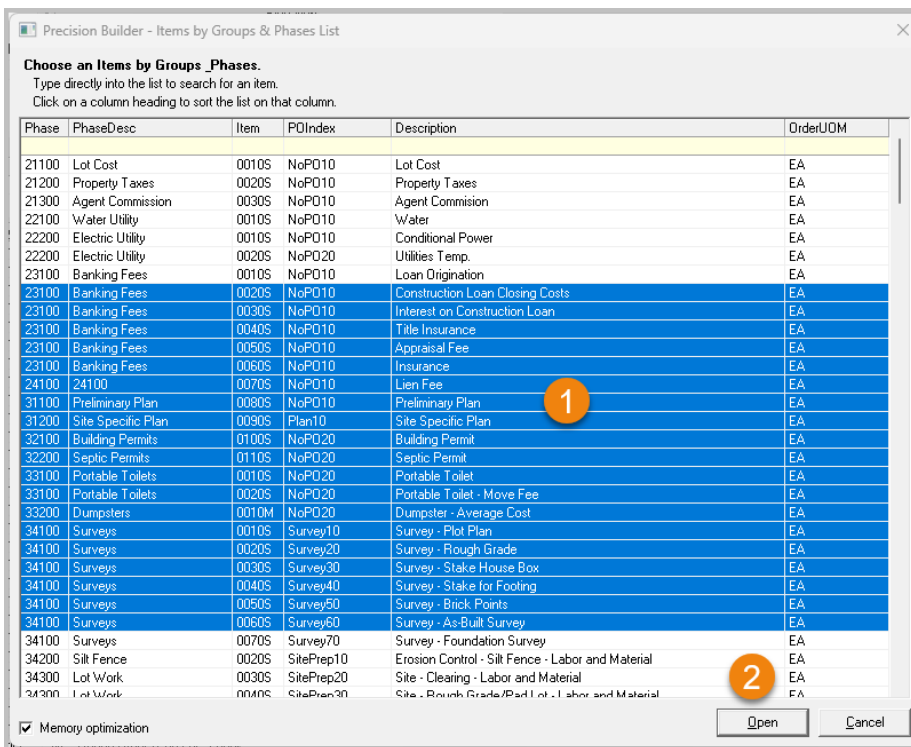

After selecting the items click **OK** and close the box. The items will appear in the assembly window behind the dialog box. Click **SAVE**.

To Multi select many items for an assembly:

With the assembly open, select the Item icon in the top toolbar:

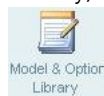

The item database picklist will appear. Ctrl+f will open an additional picklist.

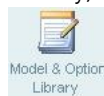

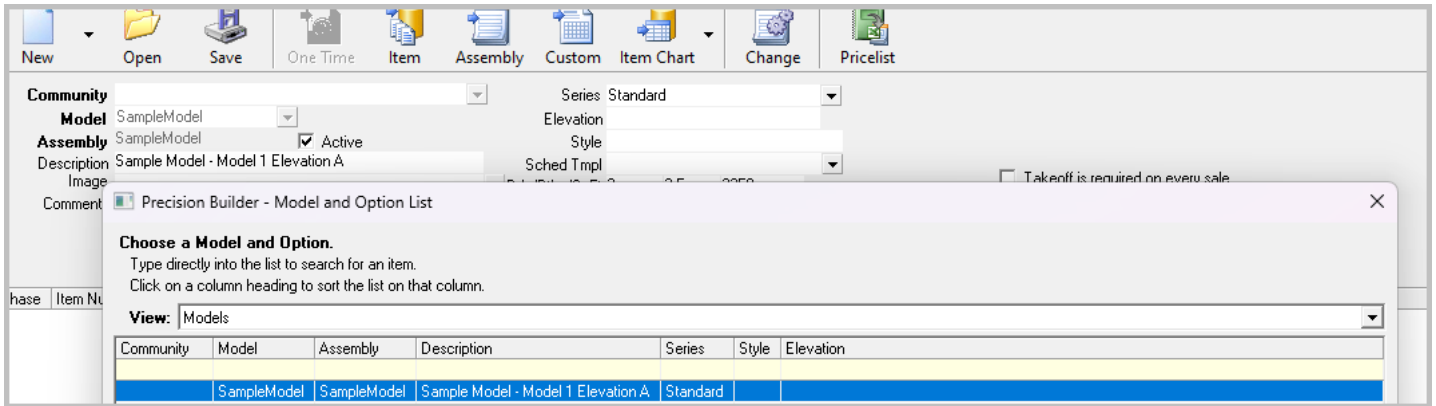

1. Select items or perform a search in the yellow search row
2. Open

Resume step 5 from the process above.

To check the existence of the newly created model assembly, close the Model and Option Library window.

Re-open Model and Option Library window by clicking . The Model and Option Library window and the Model and Option List dialog will open simultaneously. The models will appear in the Model and Option List dialog. View the figure below for example:

 **Note:** To add vendor costs, proceed to Section 8.0 Vendor Price Management

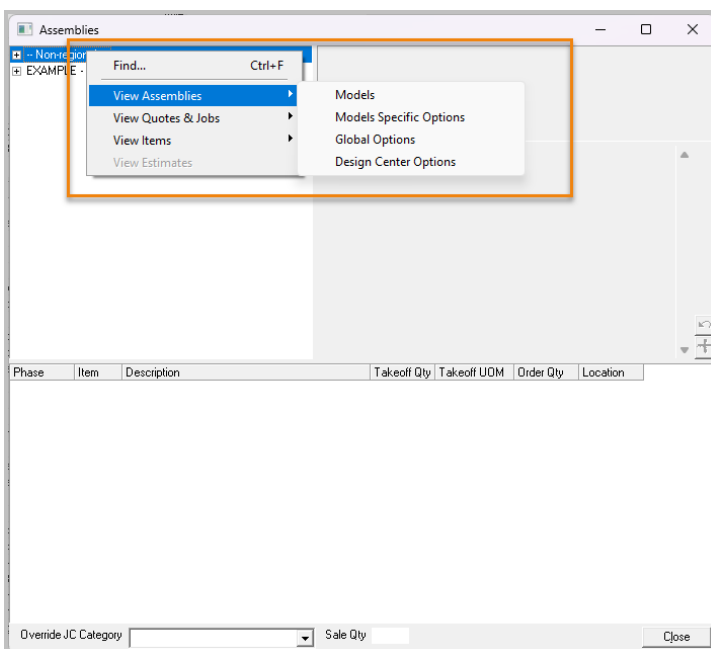

7.3 Creating Model and Option Assemblies using Assembly Templates

Follow the instructions in the “Creating an Assembly Header Record.”

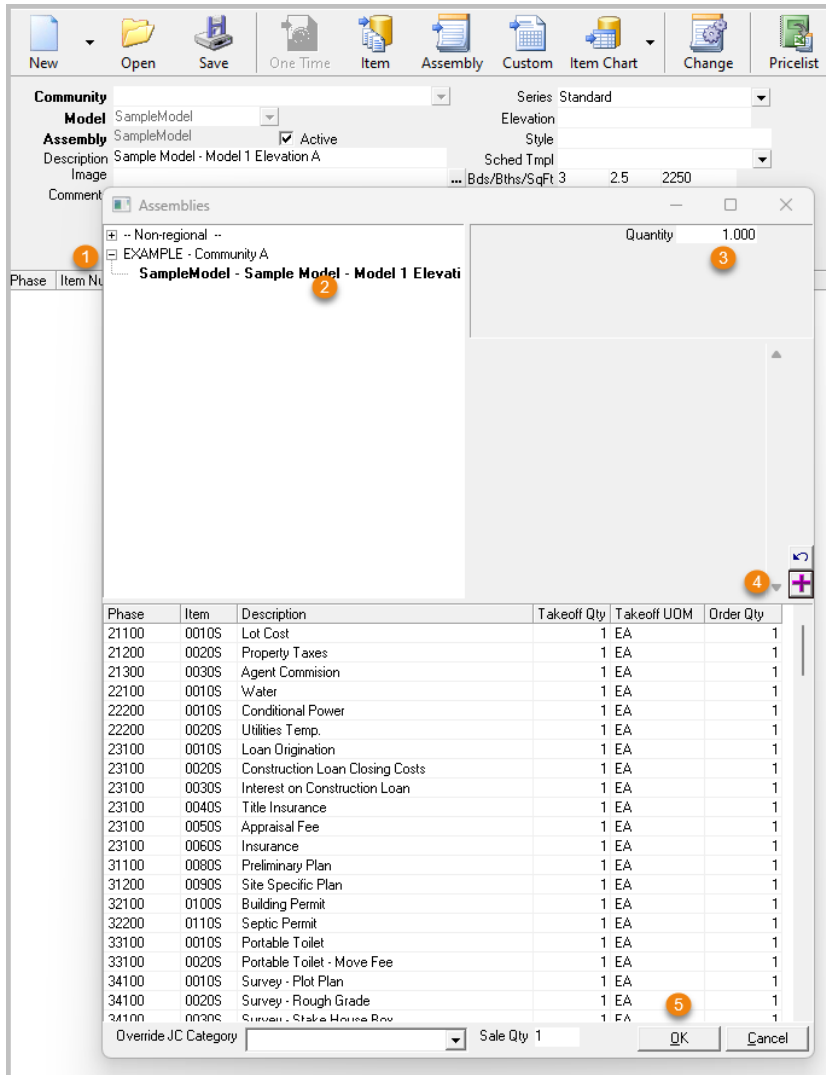

Click **Assembly** above the header area. The Assemblies dialog will open.

In the Assemblies dialog, select the assembly template to use in the creation of the new assembly. Note: multiple assembly templates can be selected, one after another, to create the new assembly. In this case only one will be selected. View the figure below for example:

Right click on a row in the top left pane to open the “view assemblies” menu. Choose the list of Assemblies to be chosen from. In the below example, Models has been selected.

1. Expand the folder containing the assembly to be copied **into** the new assembly.
2. Double click on the assembly that has similar items to the one being created. The items of the assembly that are selected will appear in the bottom pane.
3. In this field, set the Quantity increments. This example is set to 1 therefore the takeoff quantity will increase by 1. When adding an Assembly, this field should not be used as the add pass will complete a direct quantity copy from the assembly chosen.
4. Click the **add pass** to populate the Takeoff Qty and Order Qty in the bottom pane.
5. After selecting the assembly click OK on the Assemblies dialog. The items will appear in the assembly in the Model and Option Library window.

Click Cancel to close the Assembly dialog. The Model and Option Library window will be on display containing the items from the assembly template.

Click

Note: To add vendor costs, proceed to Section 8.0 Vendor Price Management

7.4 Inactivating Model and Option Assemblies

Inactivating a model and/or option can occur on the following levels:

1. Precision (Model and Option Library)
2. Precision and Sales (Profit/HomeFront Sales and Model and Option Library)

To inactivate a Model/Option that is **NOT** published to Sales, **uncheck** the below toggle followed by the SAVE icon:

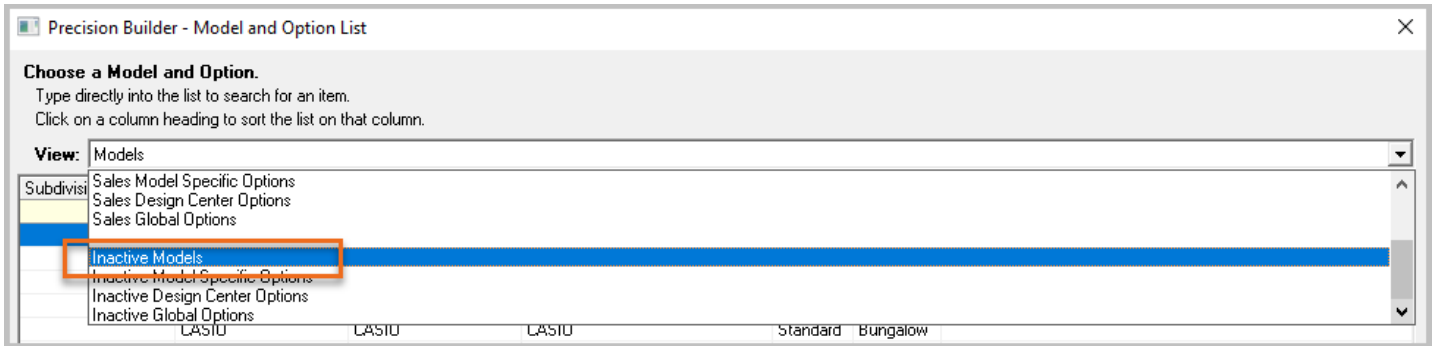

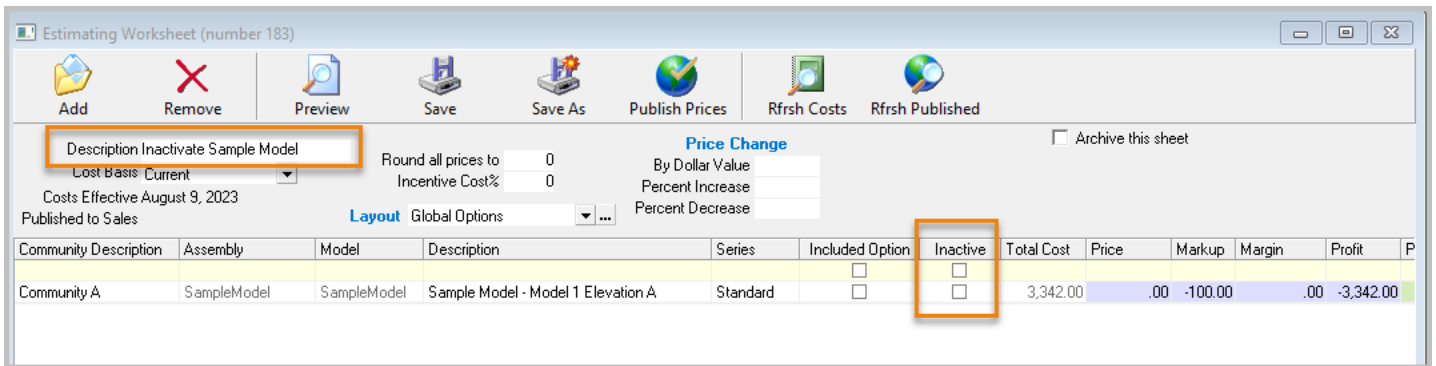

Community SampleModel Series: Standard
Model SampleModel Elevation
Assembly SampleModel Style
 Description Sample Model - Model 1 Elevation A Sched Tmpl
 Image ... Bds/Bths/SqFt 3 2.5 2250
 Comments Width/Length 45 45 Spec Doc
[Edit Dimensions...](#)

☒ Active
☐ Takeoff is required on every sale.
☒ Use normal sales quantity factors.
☐ Base assembly. Will not be published to sales.
 Show pricing for: ...

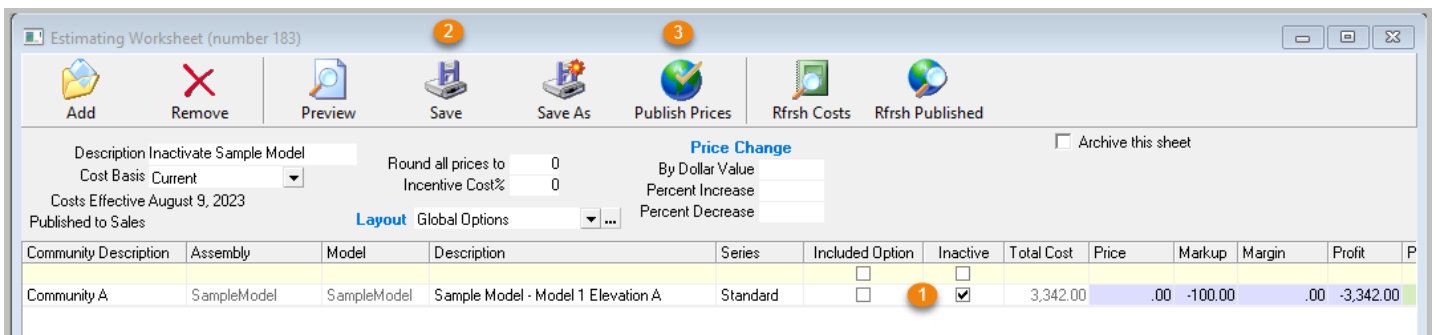

This will move the assembly to the “inactive” pick list:

To inactivate a Model /Option that **IS** published to Sales, the Sales record needs to be inactivated followed by inactivating the assembly. To complete this task, open or create an estimating worksheet. In the example below, a new worksheet has been created for the purpose of inactivating the chosen Model. Currently the “Inactive” box is not selected.

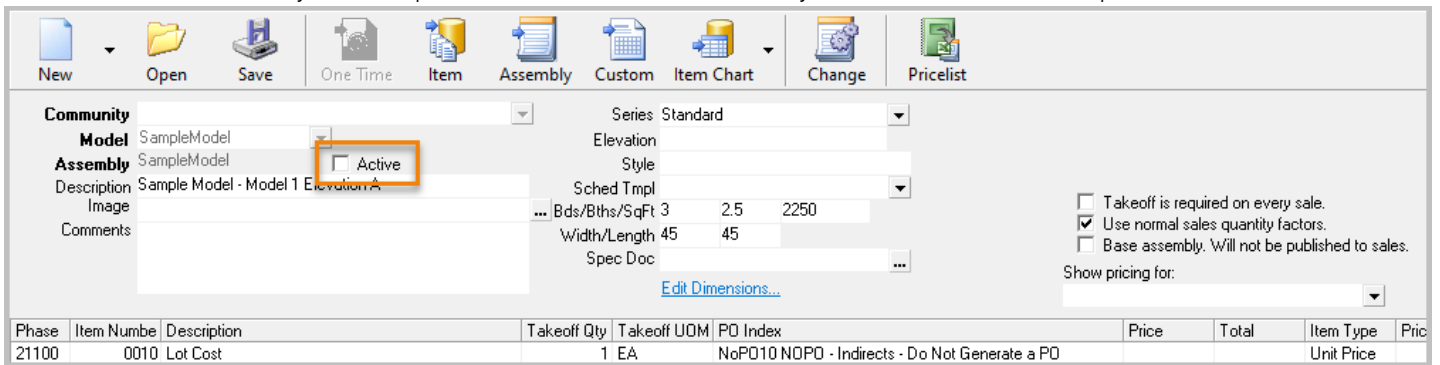

To inactivate the Sales record of this Model, check the Inactive box for the Model, SAVE and PUBLISH PRICES.

Ensure to inactivate all Models should there be multiple community specific combinations. IE: Sample Model/Community A, Sample Model/Community B etc.

To inactivate the assembly and complete this task, select the assembly within Edit Models and Options:

The screenshot shows the 'Edit Models and Options' window. The 'Community' dropdown is set to 'SampleModel'. The 'Model' dropdown is also set to 'SampleModel'. The 'Assembly' dropdown is set to 'Sample Model - Model 1 Elevation A'. The 'Active' checkbox is checked and highlighted with an orange box. The 'Series' dropdown is set to 'Standard'. The 'Elevation' dropdown is set to 'Style'. The 'Sched Tmpl' dropdown is set to 'Bds/Bths/SqFt 3'. The 'Width/Length' is set to '45'. The 'Spec Doc' is set to '2.5 2250'. The 'Takeoff Qty' is set to '1'. The 'Takeoff UOM' is set to 'EA'. The 'PD Index' is set to 'NoPO10 NOPD - Indirects - Do Not Generate a PO'. The 'Price' is set to 'Unit Price'. The 'Total' is set to 'Unit Price'. The 'Item Type' is set to 'Unit Price'. The 'Pricing' is set to 'Unit Price'.

Phase	Item Number	Description	Takeoff Qty	Takeoff UOM	PD Index	Price	Total	Item Type	Price
21100	0010	Lot Cost	1	EA	NoPO10 NOPD - Indirects - Do Not Generate a PO			Unit Price	

Uncheck the Active box followed by the SAVE icon.

7.5 Assembly Fields and their Functions

Fields in assembly header area (see legend at the bottom of this table)

Field	Purpose or function	Examples or Scenarios	M	MS	G	S
Community	Full Community Name. Used by builders who wish to have their sales pricing and budget information broken down by Community.	Anders Lake (full name of community)	√	√	√	√
Phase (If applicable)	Used by builders who wish to have their models broken down further; by Phases within a community.	1 (may represent Phase1) 2 (may represent Phase2)	√	√	√	√
Option Assembly ID	Represents the code that will uniquely identify the option. (If the options are also set up as individual assemblies within Sage 300Office Estimating it will also be used as the Assembly ID in Timberline Estimating)	ASPVI01A02 (may represent an option available on model: Venice II Elevation A"ASPVI01A")		√	√	
Model Assembly ID	Represents the code that uniquely identifies the model or when used for model specific options is combined with the option assembly ID to uniquely identify the model specific option. (If the models are set up as individual assemblies within Sage 300 Office Estimating it will also be used as the Assembly ID in Timberline Estimating)	ANDKE01C (may represent an option available on model: Kennedy Elevation C	√	√		
Assembly Description	Description of the model or option as seen from the sales centers.	Kennedy Elevation C	√	√	√	√
Series	(Available on Model templates only. Required field) identifies the specification level of the model		√	√		√
Option Category ID	Abbreviation code for the option categories Group. This defines the organizational structure of the options.	Group ID: FLR Group Description: Flooring		√	√	
Option Category Description	Full Description for the option categories Group. This defines the organizational structure of the options.	Group ID: FLR Group Description: Flooring		√	√	√

Option Subcategory ID	Abbreviation code for the option categories within the option Groups. This defines the organizational structure of the options.	Category ID: HWD Category Description: Hardwood		✓	✓	
Option Subcategory Description	Full Description of the option categories within the option Groups. This defines the organizational structure of the options.	Category ID: HWD Category Description: Hardwood		✓	✓	✓
Assembly Comments	Used to provide further comments to the model or option and will be visible within the model and option listing within the sales center.		✓	✓	✓	✓
Construction Cut-off	(Numeric value) used to identify the scheduling cutoff point at which the option should no longer be available for selection.			✓	✓	✓
Beds/Bath/SF Width/Length	Used to provide additional information to the sales center regarding the model.		✓			✓
Style	Used to provide additional information to the sales center regarding the model.		✓			✓
Elevation	DO NOT USE THIS FIELD. To be discontinued					
Sched Template	Schedule Template Code. To be used with BuildPro integration		✓			
Estimator Notes	Notes for Precision only			✓	✓	
Show Pricing For	Populates Community Pricing and Vendors		✓	✓	✓

MS – Model Specific Assembly
G – Global Assembly
S – HomeFront Sales

8.0 VENDOR PRICE MANAGEMENT ▲

8.1 Price Level and Item Type System Lookups

Pricing levels and Item Types enable different pricing based on any of the below combinations. 1-6 is looked up in **Vendor Pricing (Vendor Pricelists)** whereas 7 is from the **Item table (Item Database)**.

Vendor Pricelists

1. Community, Community Phase, Assembly, Item
2. Community, Assembly, Item
3. Assembly, Item
4. Community, Community Phase, Item
5. Community, Item
6. Item

Item Database

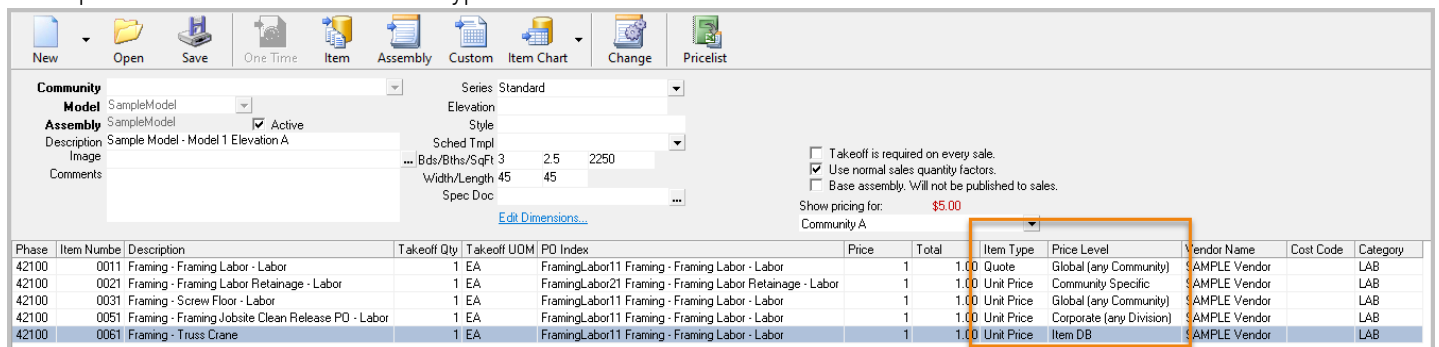

7. Item database

When prices are viewed/changed using Edit Models & Options screen, the price will read/write to either the Vendor Pricing list or the Items list depending upon how the fields below are configured.

Prerequisites to this task are:

1. Vendors synched from accounting system
2. Communities have been created
3. Groups and Phases have been created
4. Item Database has been created
5. PO Indexes have been created
6. Default Vendors have been assigned to PO Indexes for Global or Communities

Descriptions of Price Levels and Item Type is as follows:

Phase	Item Number	Description	Takeoff Qty	Takeoff UOM	PO Index	Price	Total	Item Type	Price Level	Vendor Name	Cost Code	Category
42100	0011	Framing - Framing Labor - Labor	1	EA	FramingLabor11 Framing - Framing Labor - Labor	1	1.00	Quote	Global (any Community)	SAMPLE Vendor		LAB
42100	0021	Framing - Framing Labor Retainage - Labor	1	EA	FramingLabor21 Framing - Framing Labor Retainage - Labor	1	1.00	Unit Price	Community Specific	SAMPLE Vendor		LAB
42100	0031	Framing - Screw Floor - Labor	1	EA	FramingLabor11 Framing - Framing Labor - Labor	1	1.00	Unit Price	Global (any Community)	SAMPLE Vendor		LAB
42100	0051	Framing - Framing Jobsite Clean Release PO - Labor	1	EA	FramingLabor11 Framing - Framing Labor - Labor	1	1.00	Unit Price	Corporate (any Division)	SAMPLE Vendor		LAB
42100	0061	Framing - Truss Crane	1	EA	FramingLabor11 Framing - Framing Labor - Labor	1	1.00	Unit Price	Item DB	SAMPLE Vendor		LAB

1. Item Type Column
 - **Quote:** Price is Assembly Specific
 - **Unit Price:** Price is not Assembly Specific
2. Price Level Column
 - **Corporate:** Price applies to all Divisions
 - **Global:** Price applies to all communities in same Division

- **Community Specific:** Price applies to Community specified in “**Show Pricing For**” drop down list.
- **Item DB:** Price is used in **Item database** as opposed to a vendor.

8.2 Item Price Combinations

The below table shows price combinations most specific to system default.

Item Type	Price Level	
Quote	Phase Specific	Vendor Price applicable to a particular assembly and phase of a community
Quote	Community Specific	Vendor Price applicable to a particular assembly and community
Quote	Global (any Community)	Vendor Price applicable to a particular assembly, but for any community
Unit Price	Phase Specific	Vendor Price applicable to any assembly but only a particular phase of a community
Unit Price	Community Specific	Vendor Price applicable to any assembly and only in a particular community
Unit Price	Global (any Community)	Vendor Price applicable to any assembly and any community
Unit Price	Item DB	Price applicable to the Item for any Vendor, any assembly, any community

8.3 Managing Vendor Pricing

Adding pricing to the assemblies can be completed using the following methods:

Edit Models and Options

- Enter directly into the assembly in the price column

Vendor Pricing - Edit Item Prices Menu

- Enter directly into the vendor price list
- Create Vendor Price lists using the Add Vendor Pricing Tool
- Use the Vendor Export/Import Tool

Managing Vendor Pricing in POs, and Budgets (Job Records)

8.3.1 Vendor Pricing in Edit Models and Options:

Existing Cost Prices for items, default vendors and price levels are exposed when a community is selected in the **Show pricing for** field. The below example shows a new Assembly with new items added. As there is no community chosen, the **Item type**, **Price Level** and **Vendor Name** columns are empty:

New Open Save One Time Item Assembly Custom Item Chart Change Pricelist

☐ Base assembly. Will not be published to sales.

Show pricing for:

Phase	Item Number	Description	Takeoff Qty	Takeoff UOM	PO Index	Price	Total	Item Type	Price Level	Vendor Name	Cost Code	Category
42100	0011	Framing - Framing Labor - Labor	1	EA	FramingLabor11 Framing - Framing Labor - Labor						42000	LAB
42100	0021	Framing - Framing Labor Retainage - Labor	1	EA	FramingLabor21 Framing - Framing Labor Retainage - Labor						42000	LAB
42100	0031	Framing - Screw Floor - Labor	1	EA	FramingLabor11 Framing - Framing Labor - Labor						42000	LAB
42100	0051	Framing - Framing Jobsite Clean Release PD - Labor	1	EA	FramingLabor11 Framing - Framing Labor - Labor						42000	LAB
42100	0061	Framing - Truss Crane	1	EA	FramingLabor11 Framing - Framing Labor - Labor						42000	LAB

By choosing a Community, all Default Vendors will populate although the new items will default as follows:

1. **Price Level:** Item DB
2. **Item Type:** Unit Price

This is because the items have not been assigned to the applicable price levels and vendor costs have not been assigned. To enter pricing in assemblies, the Price Level must be changed from **Item DB** to either **Global** or **Community Specific**.

Click

When the effective date is applicable, a soft warning will appear upon opening precision:

Choose OK and a notification appears:

Entering pricing using this method will automatically update Edit Model and Option Assemblies but **WILL NOT** update Job Records.

8.3.3 Creating a new or editing an existing Vendor Pricelist

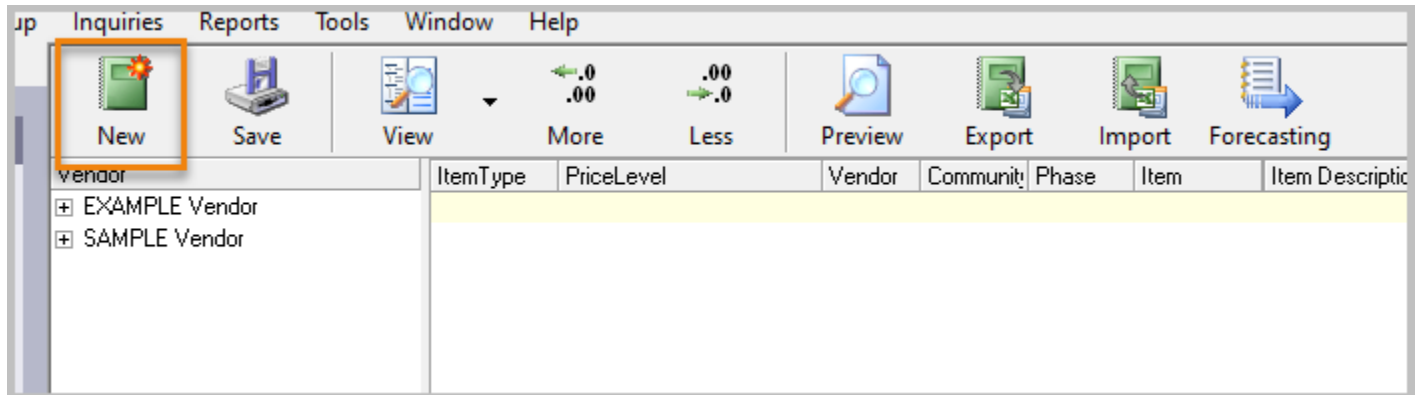

The Importing pricelist functionality is very useful when it is desired to have the Vendors update the prices on a spreadsheet. After updating the spreadsheet, the Vendors will then return the spreadsheet to import into Precision Builder.

A Vendor Pricelist can be created with items straight from the database.

Note: The Importing pricelist functionality requires that there should be an existence of some value on the Price field of all items, even if the value is \$0. When there are no values in the Price field, by executing the following steps, Precision Builder will automatically assign the value of \$0 to all the items that do not have prices. Without executing the following steps, the system will not allow the process of importing new vendor prices.

Open the **Vendor Item Prices** window and choose NEW. The **Add Vendor Pricing** dialog will open.

On the **Add Vendor Pricing** dialog enter the necessary information. See example below for required fields:

1. Use the ellipsis to choose Vendor
2. Use the drop down to choose Community or Global
3. Use the ellipsis to choose the Assembly (if applicable)

Add Vendor Pricing

Create a Vendor Pricelist
Select the vendor and price list information, then selected purchase orders and enter prices.

Vendor 002 - EXAMPLE Vendor

Save Clear List Close

- Select the PO(s) which the price is going to affect.
- Line items of the PO(s) selected will appear on the right pane under the header Item Prices
- Line items with no price entered in the assembly or vendor pricelist are auto set to 0.00. Auto setting of the zeros, enables the import of new prices. Prices can also be entered in the price column.

After entering the necessary information on the Add Vendor Pricing dialog click Save. A dialog will appear, notifying that there are items with \$0.00 price. Click Yes if the 0.00 items are to be saved. The dialog will close.

Close the Add Vendor Pricing dialog.

8.3.4 Exporting/Importing a Vendor Pricelist with Excel

Open the **Vendor Item Prices** window and choose **EXPORT**. The **Export Wizard** will open.

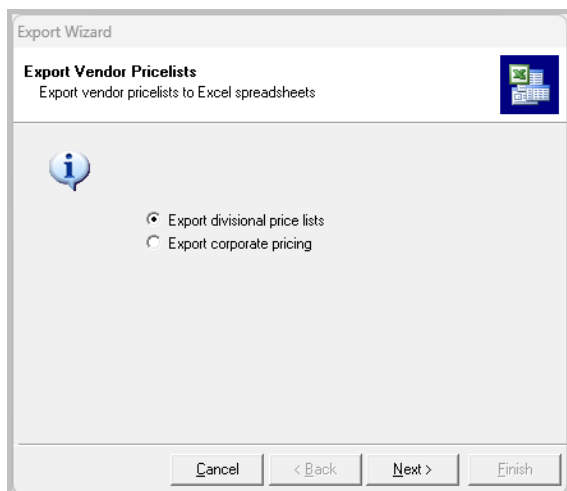

File Inquiries Reports Tools Window Help

New Save View More Less Preview **Export** Import Forecasting

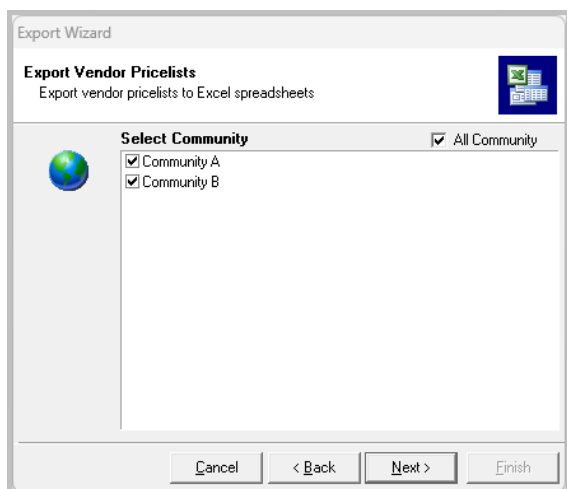

Vendor: EXAMPLE Vendor, SAMPLE Vendor

Item Type	Price Level	Vendor	Community	Phase	Item	Item Description

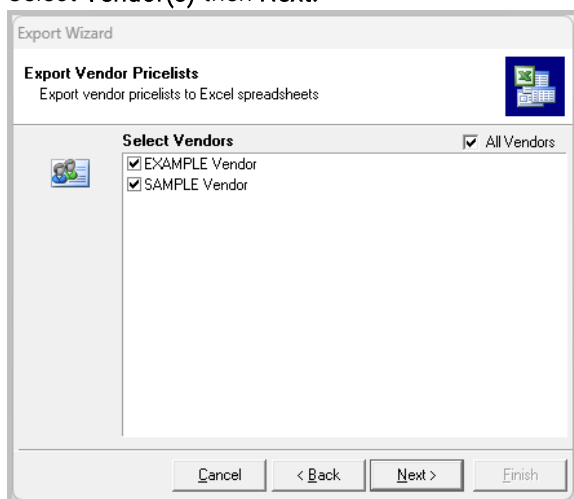

Choose divisional or corporate price lists then **Next**.

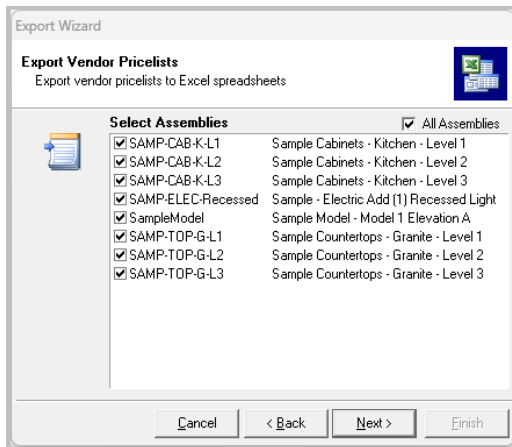

Select communities then **Next**.

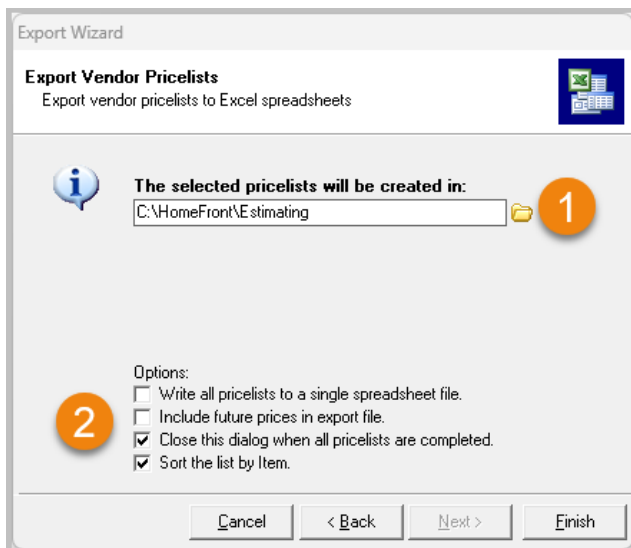

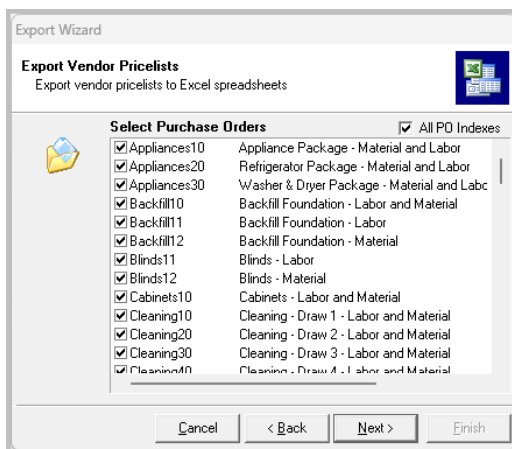

Select **Vendor(s)** then **Next**.

Select Assemblies the Next

Select the Purchase Order Indexes then Next.

1. Click the folder to specify the location to save the vendor spreadsheet.
2. Toggle for further selections:
 - **Write all pricelists to a single spreadsheet file:** Selecting this option the pricelists of multiple vendors will be consolidated to one spreadsheet. Selection is not recommended if each vendor is to have a separate spreadsheet.
 - **Include future prices in export file:** selection of this option will contain columns to input future date and future pricing columns on the spreadsheet. Recommended selection.
 - **Close this dialog when all pricelists are completed:** Selecting this option will close the export wizard as finish is clicked. Recommended selection.
 - Sort the list by item: Sorts list by Item.

Click **Finish** on the **Export Wizard** to export the spreadsheet to the location specified.

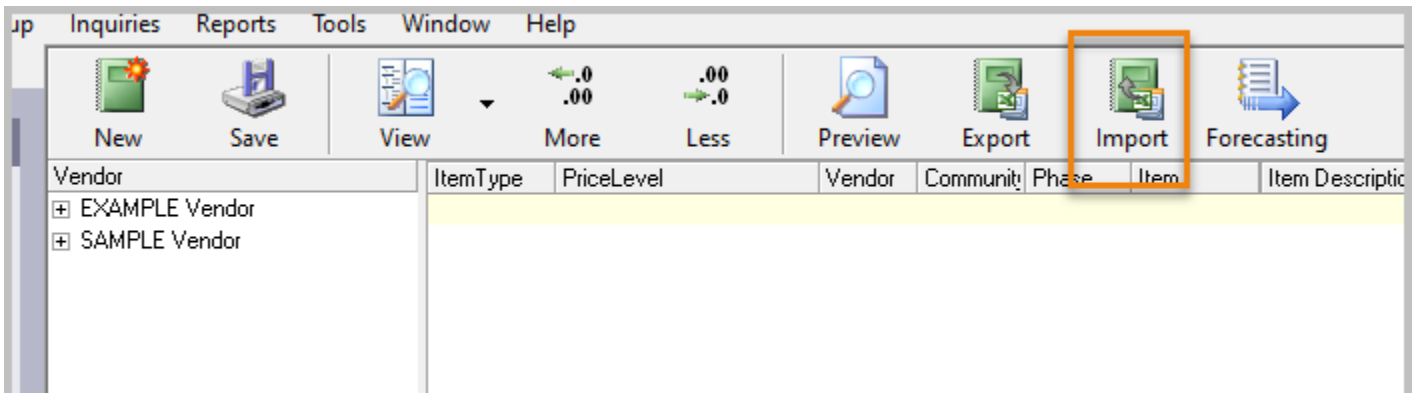

Minimize Precision Builder and open the spreadsheet in the location saved. The spreadsheet will be like the one shown on the figure below. Note that the figure below contains the information from the Example. In this spreadsheet, new vendor prices can be entered for the items.

Vendor	Company Name	Phase	Community Name	Model	Specification	Assembly Description	Group	Item	Item Description	Part Number	UOM	Price	Next Price 1	Effective 1	Next Price 2	Effective 2

Close the Price comparison report. Click Finish on the Import Pricelist Wizard. The new item prices have now been imported into Precision Builder

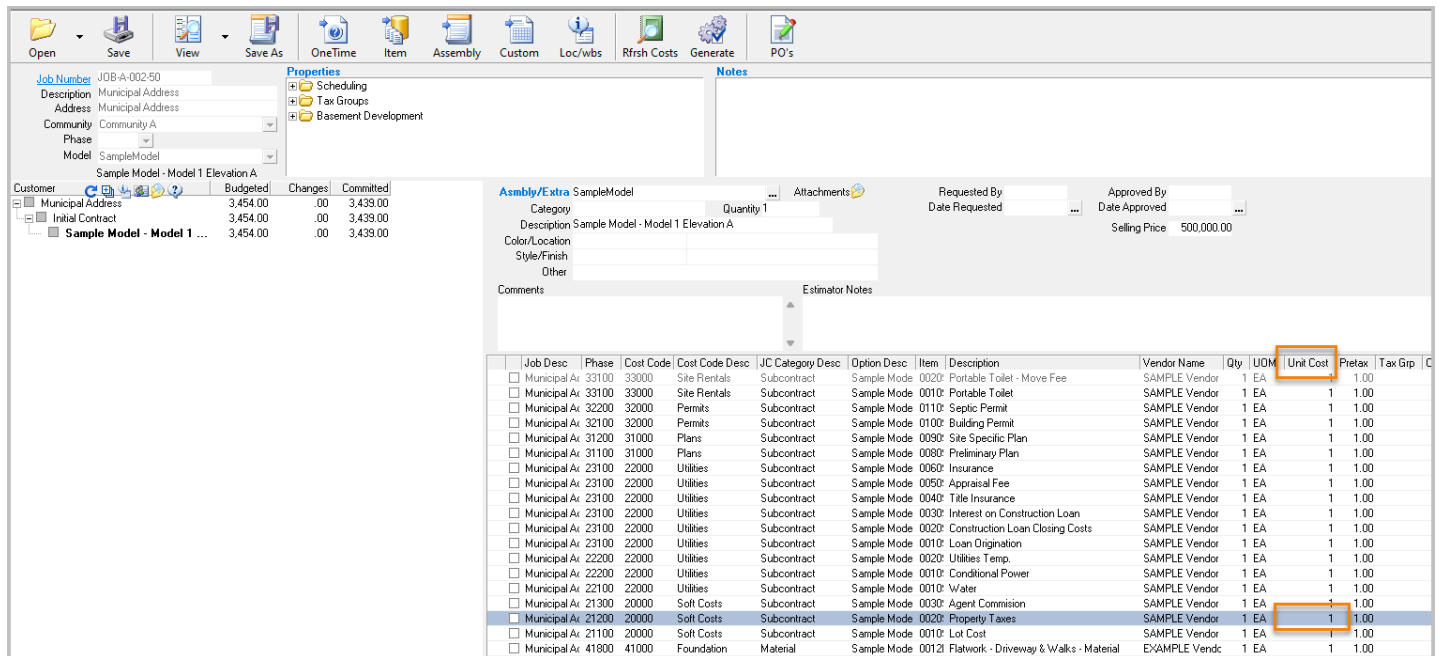

8.3.5 Maintain Vendor pricing in Job records

A price can be updated from a Job record to the Vendor Pricelist

From the Issue Budgets or Issue PO's windows the following steps are completed to change a price:

1. Highlight the cell to change the value for
2. Type in the new value in the cell and click the **Save** button

Existing Unit Price:

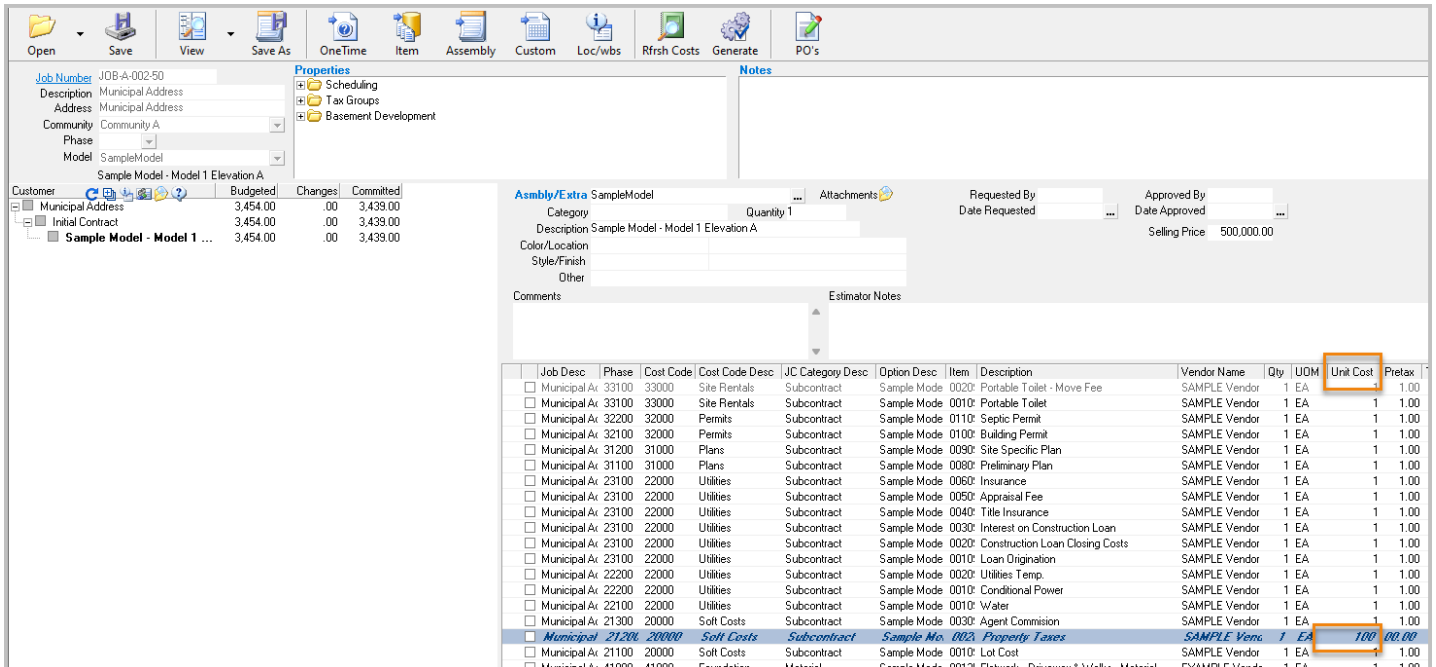

The screenshot shows the Hyphen Homefront software interface. The top menu bar includes options like Open, Save, View, Save As, OneTime, Item, Assembly, Custom, Loc/wbs, Refresh Costs, Generate, and PO's. The left sidebar shows a tree view of job records, with 'Sample Model - Model 1 ...' selected. The main window displays a 'Properties' tab with fields for Job Number, Description, Address, Community, Phase, and Model. Below this is a table with columns for Customer, Budgeted, Changes, and Committed. The 'Assembly/Extra' section shows a list of items with columns for Job Desc, Phase, Cost Code, Cost Code Desc, JC Category Desc, Option Desc, Item, Description, Vendor Name, Qty, UOM, Unit Cost, Prelax, Tax Grp, and C. The 'Unit Cost' column is highlighted in orange. The 'Notes' tab is also visible on the right.

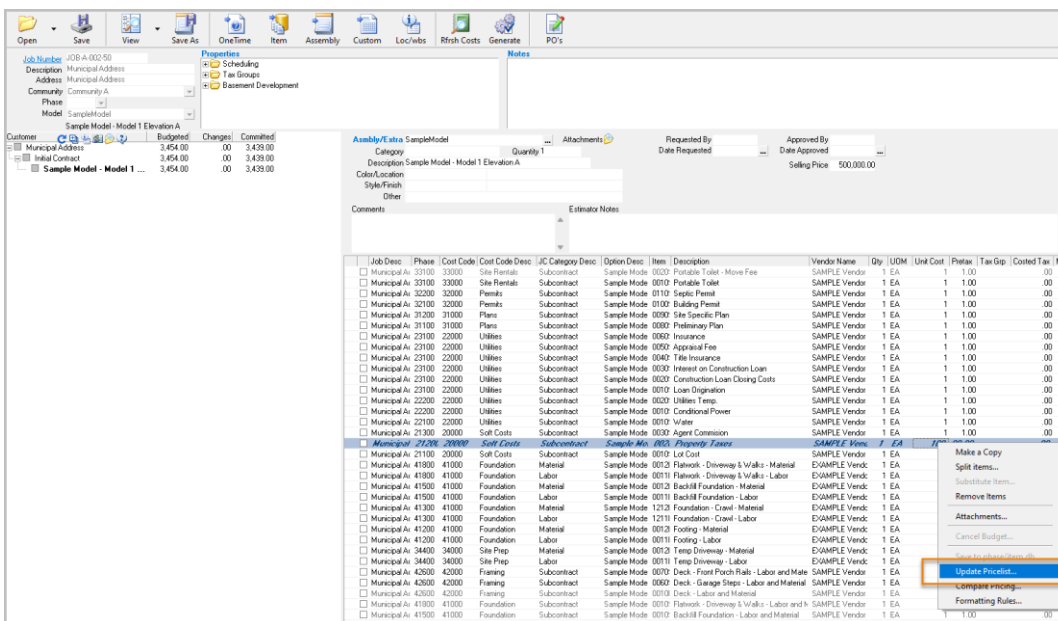

Customer	Budgeted	Changes	Committed

Click into the cell and type revised price and "enter"

After performing the change, right click on the cell changed. A drop-down menu opens. Select **Update Pricelist** from the drop-down menu.

1. **What type of price is this?** Designates whether the price shown is to be considered a **Unit Price** or a **Quote**. Unit Price items are prices that are not specific to the assembly, whereas Quotes are prices that are for the item as it relates to the specific assembly shown.
2. **What communities does this price apply to?**
 - **Everywhere:** all communities across the current division
 - **Community in this phase only:** this phase of this community
 - **Any Phase in Community:** all phases of this community

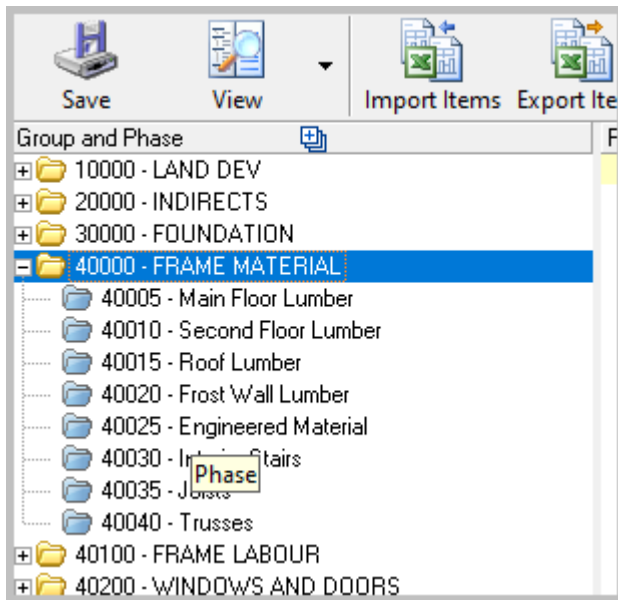

9.0 ADDITIONAL SYSTEM SET UP TOOLS

9.1 Price Link

Price link is an item price management tool used to group the same item in different item phases. Once items are grouped, price updates will apply to all items within the price group at the same time.

Without Price Link, the item will need to be individually updated within each item phase.

A common example would be lumber materials. An item database may have several lumber item phases:

Within each Phase, an item may be replicated. In the below example 2x4 104 is used within Main Floor Lumber, Second Floor Lumber and Roof Lumber.

Save	View	Import Items	Export Items			
Group and Phase				Phase	Phase Description	Item Description / Takeoff
+ 10000 - LAND DEV						
+ 20000 - INDIRECTS						
+ 30000 - FOUNDATION						
- 40000 - FRAME MATERIAL						
- 40005 - Main Floor Lumber				40005	Main Floor Lumber	2x4 104 EA
- 40010 - Second Floor Lumber				40010	Second Floor Lumber	2x4 104 EA
- 40015 - Roof Lumber				40015	Roof Lumber	2x4 104 EA
- 40020 - Frost Wall Lumber				40025	Engineered Material	Beams, Bucks & Ladder Package LS
- 40025 - Engineered Material				40030	Interior Stairs	Closed Rise Stair QUOTE
- 40030 - Interior Stairs				40030	Interior Stairs	Custom Stair as per Plan QUOTE
- 40035 - Joists				40030	Interior Stairs	Delivery EA
- 40040 - Trusses				40020	Frost Wall Lumber	Frost Wall Lumber Package LS
+ 40100 - FRAME LABOUR				40030	Interior Stairs	Installation EA
+ 40200 - WINDOWS AND DOORS				40035	Joists	Main Floor Joist Package QUOTE
				40025	Engineered Material	Main Floor PreFab Interior Walls EA

Price link will create a group for all 2x4 104's and any vendor pricing updates will be applied for this item in all phases at the same time.

9.1.1 Creating Price Links

Price Links are created in the Item Database. A Price Group is created then items are assigned to the applicable Price Group.

Precision/Setup/Edit Item Database

In the example below, there are 2x4 104's in Main Floor, Second Floor and Roof Lumber. All items belong to the 2x4 104 Pricing Group:

Item Number	Item	Phase	Phase Description	Item Description /	Takeoff Unit	PO Index Description	PO Index	Pricing Group
015	015M	40005	Main Floor Lumber	2x4 104	EA	Main Floor Lumber	40-005	2x4 104
015	015M	40010	Second Floor Lumber	2x4 104	EA	Second Floor Lumber	40-010	2x4 104
015	015M	40015	Roof Lumber	2x4 104	EA	Roof Lumber	40-015	2x4 104

Additional lumber pieces have been added to the item database. 2x6 8' has been added to Main Floor and Second Floor Lumber. There is no Pricing Group assigned.

Item Number	Item	Phase	Phase Description	Item Description /	Takeoff Unit	PO Index Description	PO Index	Pricing Group
015	015M	40005	Main Floor Lumber	2x4 104	EA	Main Floor Lumber	40-005	2x4 104
015	015M	40010	Second Floor Lumber	2x4 104	EA	Second Floor Lumber	40-010	2x4 104
015	015M	40015	Roof Lumber	2x4 104	EA	Roof Lumber	40-015	2x4 104
020	020M	40005	Main Floor Lumber	2x6 8'	EA	Main Floor Lumber	40-005	
020	020M	40010	Second Floor Lumber	2x6 8'	EA	Second Floor Lumber	40-010	

To create a pricing Group for the 2x6 8' lumber pieces, right click on one of the items needed for the Price Group

Item Number	Item	Phase	Phase Description	Item Description /	Takeoff Unit	PO Index Description	PO Index	Pricing Group

This process may be used to update Next 1 or Next 2 when applicable.

9.1.3 Updating Items with Price Links using the Vendor Export

When Using the Vendor Pricelist Export wizard and no Price Groups, all items will list on the excel file displaying the item number assigned by the user, in the item database.

Item Database without Price Groups:

Group and Phase	Item Number	Phase	Phase Description	Item Description /	Takeoff Unit	Pricing Group
10000 - LAND DEV	015	40005	Main Floor Lumber	2x4 104	EA	
20000 - INDIRECTS	015	40010	Second Floor Lumber	2x4 104	EA	
30000 - FOUNDATION	015	40015	Roof Lumber	2x4 104	EA	
40000 - FRAME MATERIAL	020	40005	Main Floor Lumber	2x6 8'	EA	
40005 - Main Floor Lumber	020	40010	Second Floor Lumber	2x6 8'	EA	

Vendor Pricelist Export without Price Groups:

Vendor	Company Name	Subdivision	Phase	Subdivision Name	Model	Specification	Assembly Description	Group	Item	Item Description	Part Number	UOM	Price
110	84 Lumber Company							40005	015M	2x4 104		EA	5
								40010	015M	2x4 104		EA	5
								40015	015M	2x4 104		EA	5
								40005	020M	2x6 8'		EA	3
								40010	020M	2x6 8'		EA	3

When an item is assigned to a Price Group, the item number on the export is generated by the system and will be different than the item database.

Item Database with Price Groups:

Group and Phase	Item Number	Phase	Phase Description	Item Description /	Takeoff Unit	Pricing Group
10000 - LAND DEV						
20000 - INDIRECTS	015	40005	Main Floor Lumber	2x4 104	EA	2x4 104
30000 - FOUNDATION	015	40010	Second Floor Lumber	2x4 104	EA	2x4 104
40000 - FRAME MATERIAL	015	40015	Roof Lumber	2x4 104	EA	2x4 104
40005 - Main Floor Lumber	020	40005	Main Floor Lumber	2x6 8'	EA	2x6 8'
40010 - Second Floor Lumber	020	40010	Second Floor Lumber	2x6 8'	EA	2x6 8'

Vendor Pricelist Export with Price Groups:

Vendor	110									
Company Name	84 Lumber Company									
Subdivision	Phase	Subdivision Name	Model	Specification	Assembly Description	Group	Item	Item Description	Part Number	UOM
							1	2x4 104		EA
							2	2x6 8'		EA
										Price
										5
										3

Entering a new cost in the price column will update all items belonging to the Price Group.

9.2 Mass Change Wizard

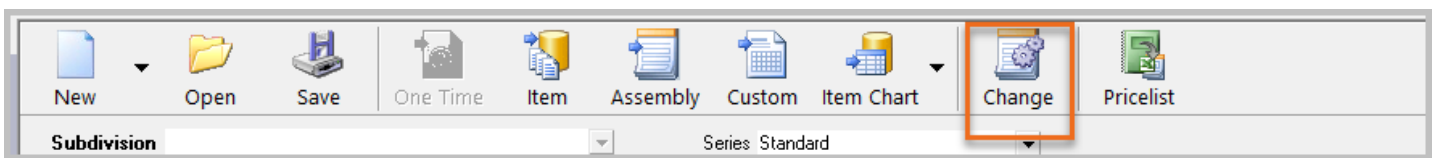

The Mass Change Wizard assists to perform the following tasks on items within assemblies:

- Add an item
- Remove an item
- Substitute one item for another
- Edit quantities

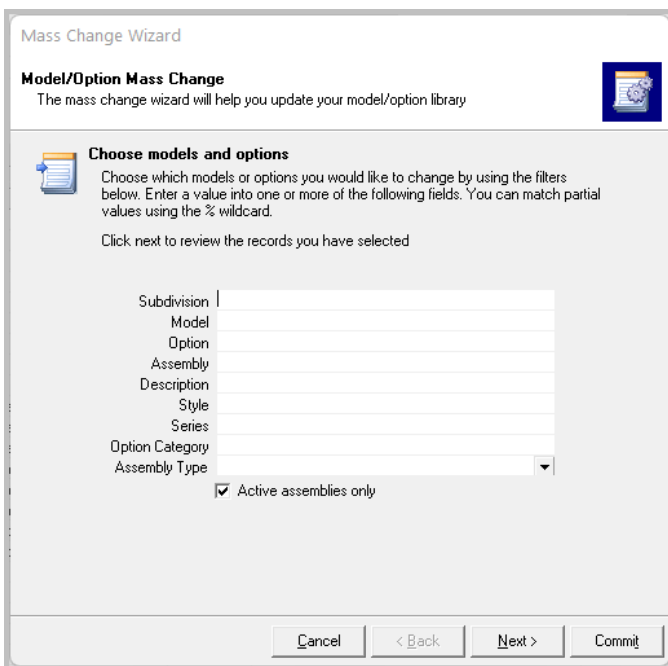

Precision/Edit Models and Options

Access the Mass Change Wizard by choosing the Change icon in the top toolbar:

Once this is selected a menu will appear prompting the filter of the product to be changed:

Filter based on specific requirements. In the example below, the change will be applied to all Models:

Mass Change Wizard

Model/Option Mass Change
The mass change wizard will help you update your model/option library

Choose models and options
Choose which models or options you would like to change by using the filters below. Enter a value into one or more of the following fields. You can match partial values using the % wildcard.
Click next to review the records you have selected

Subdivision
Model
Option
Assembly
Description
Style
Series
Option Category
Assembly Type:
☒ Active assemblies only

Upon completing the filter fields, click Next. A list of the filtered assemblies will appear:

Mass Change Wizard

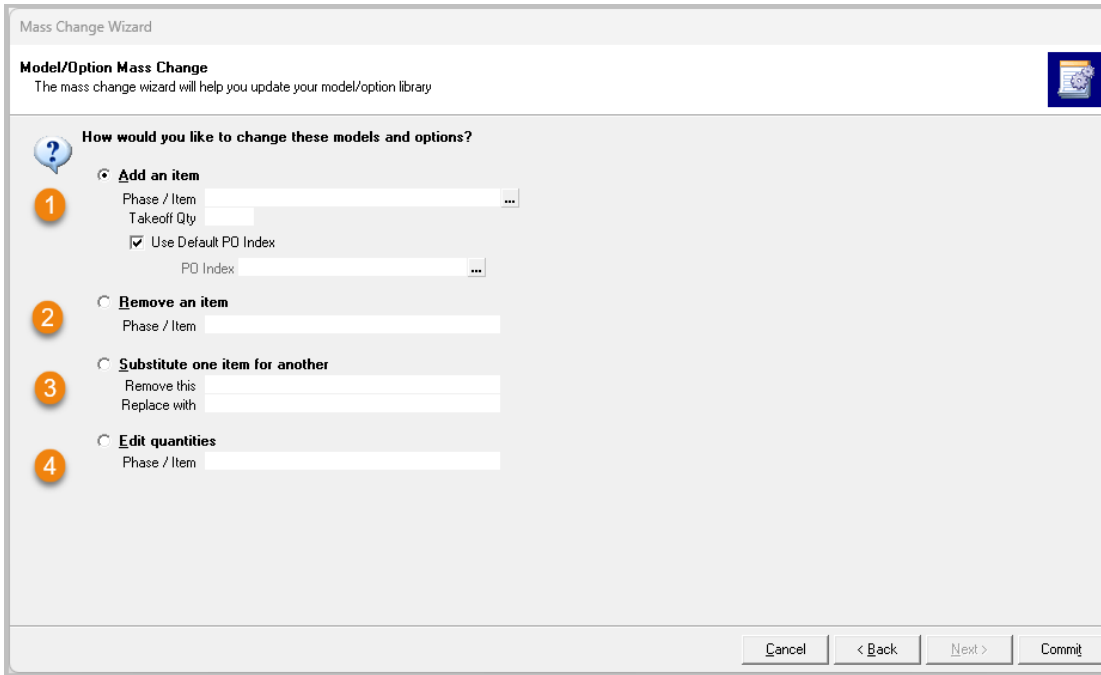

Model/Option Mass Change
The mass change wizard will help you update your model/option library

Verify your selection
These are the models and options that will be modified if you continue. Please review the list carefully to be sure it only includes the records you wish to change. If it doesn't, press the Back button and adjust your selection criteria.
Click next if the list is correct

Community	Model	OptionID	Assembly	Assembly Type	Assembly Desc	Style	Category	Active
EXAMPLE	SampleModel		SampleModel	Model	Sample Model - Model 1 Elevation A			Active

As noted in this window, this list of Models will be modified. Review the list and ensure it is accurate. If the list is not correct, click Back and refine the filters. If the list is correct, click Next

Choosing Next will enable the change tasks:

Ellipsis for pick lists will appear once the radio button is selected for required task

1. **Add an item:** Choose the Phase/Item by clicking the ellipsis, enter the Takeoff Qty and adjust the PO Index if applicable. Commit.
2. **Remove an item:** Choose the item to be removed by clicking the ellipsis. Commit.
3. **Substitute one item for another:** Choose the item to be removed by clicking on the ellipsis. Choose the replacement item by clicking on the ellipsis. Commit
4. **Edit Quantities:** Choose the Phase/Item by clicking the ellipsis. Choosing Next will populate a list of Assemblies containing the filtered item. In the screenshots below, the item "Utilities Temp" will be changed from quantity of 1 to quantity of 2:

Mass Change Wizard

Model/Option Mass Change
The mass change wizard will help you update your model/option library

How would you like to change these models and options?

☐ **Add an item**

After choosing COMMIT a completion notifier will appear:

To close the Mass Change Wizard, choose the Cancel button.

9.3 Creating Option Attributes

9.3.1 Option Attribute Summary

An attribute is defined as a characteristic of an option. The attribute's purpose is to add information specific to the option that has been selected. HomeFront allows for up to 4 attributes lists to be selected for a single option; the default list names are Color, Finish, Style and Other.

For example, A Floor Tile Option is created and named "Level 2 Floor Tile". The associated selections (attributes) that need to be communicated are:

- Tile Color (Color)
- Tile Finish (Finish)
- Laying Pattern (Style)
- Grout Color (Other)

The Attribute Values (column C) are grouped and then associated to an Attribute List (column B). The Attribute Lists are then assigned to an option.

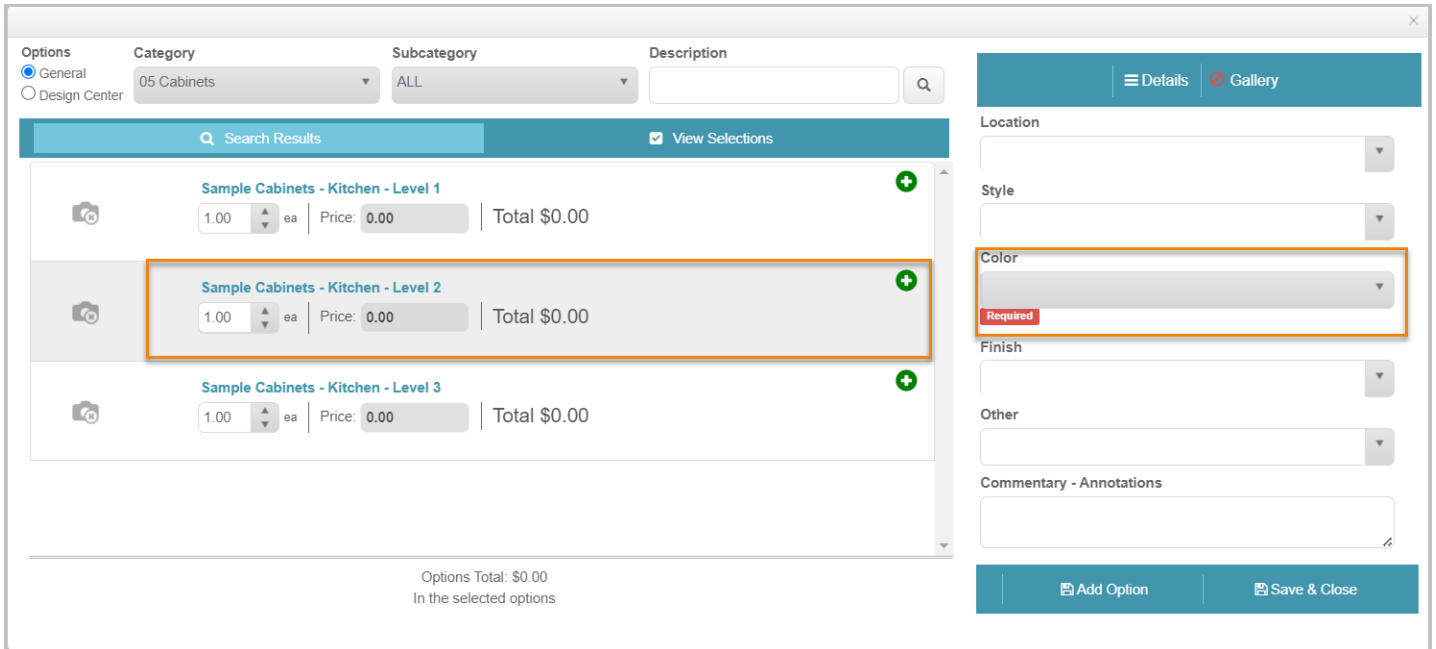

OPTION (A)	ATTRIBUTE LIST (B)	ATTRIBUTE VALUE (C)
Level 2 Floor Tile	Tile Color	Black
		White
		Grey
	Grout Color	Black
		White
		Grey
		Sand
	Tile Finish	Glossy
		Matte
		Natural
		Polished
	Laying Pattern	Subway
		Brick

Creating Attributes minimizes option product lists as one option can be created with several additional selections instead of creating an option for every option/selection combination.

The following example is a result of adding an option with Attributes in HomeFront Sales:

Sample Cabinets – Kitchen - Level 2

Upon selection of the option, HomeFront Sales will prompt for additional selections as seen in the screen shot below: *(the "required" note in red will only be visible if the attribute is marked as Mandatory in the Attribute set up window)*

The screenshot shows the HomeFront Sales interface with the 'Sample Cabinets - Kitchen - Level 2' option selected. The 'Color' attribute is highlighted with a red box and labeled 'Required'. The interface includes a search bar, a list of options, and a details panel on the right.

Options	Category	Subcategory	Description
General	05 Cabinets	ALL	

Search Results: View Selections

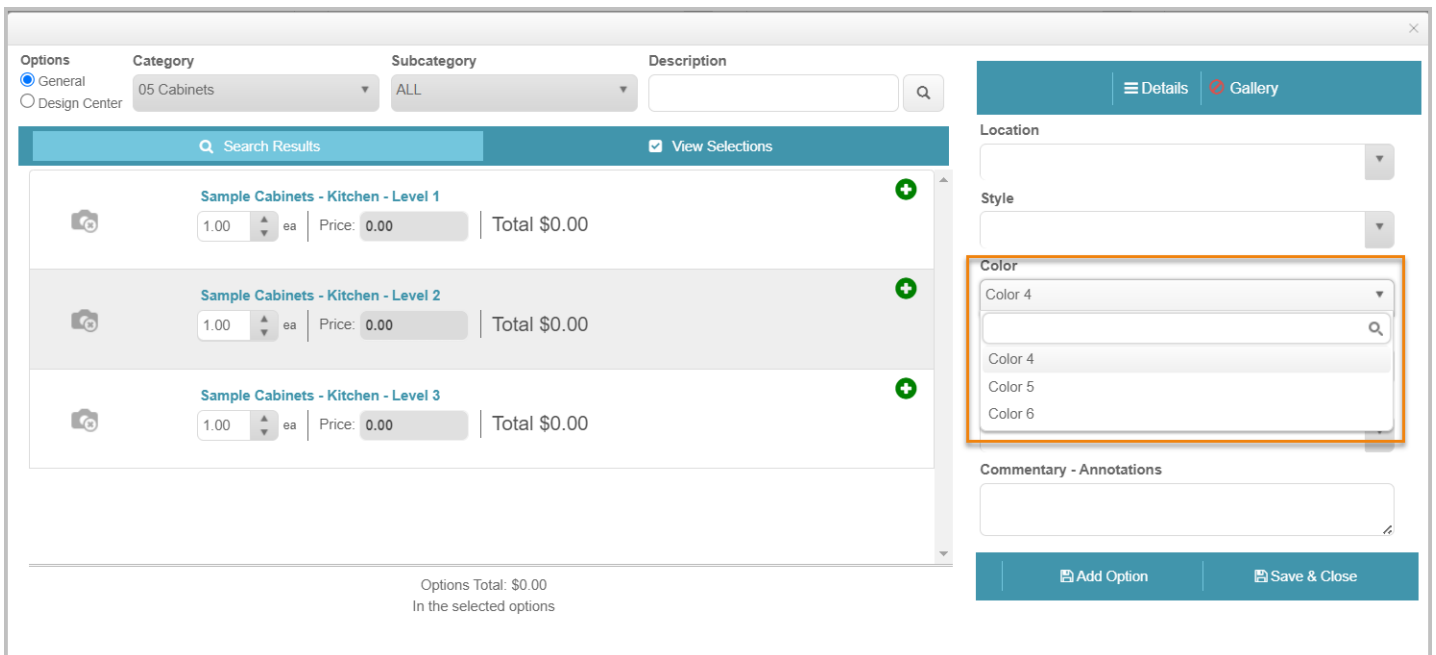

Option	Quantity	Unit	Price	Total
Sample Cabinets - Kitchen - Level 1	1.00	ea	0.00	\$0.00
Sample Cabinets - Kitchen - Level 2	1.00	ea	0.00	\$0.00
Sample Cabinets - Kitchen - Level 3	1.00	ea	0.00	\$0.00

Options Total: \$0.00

The attribute selections will print on the HomeFront Sales Addendum, Change Order Document and will also populate on the Purchase Order.

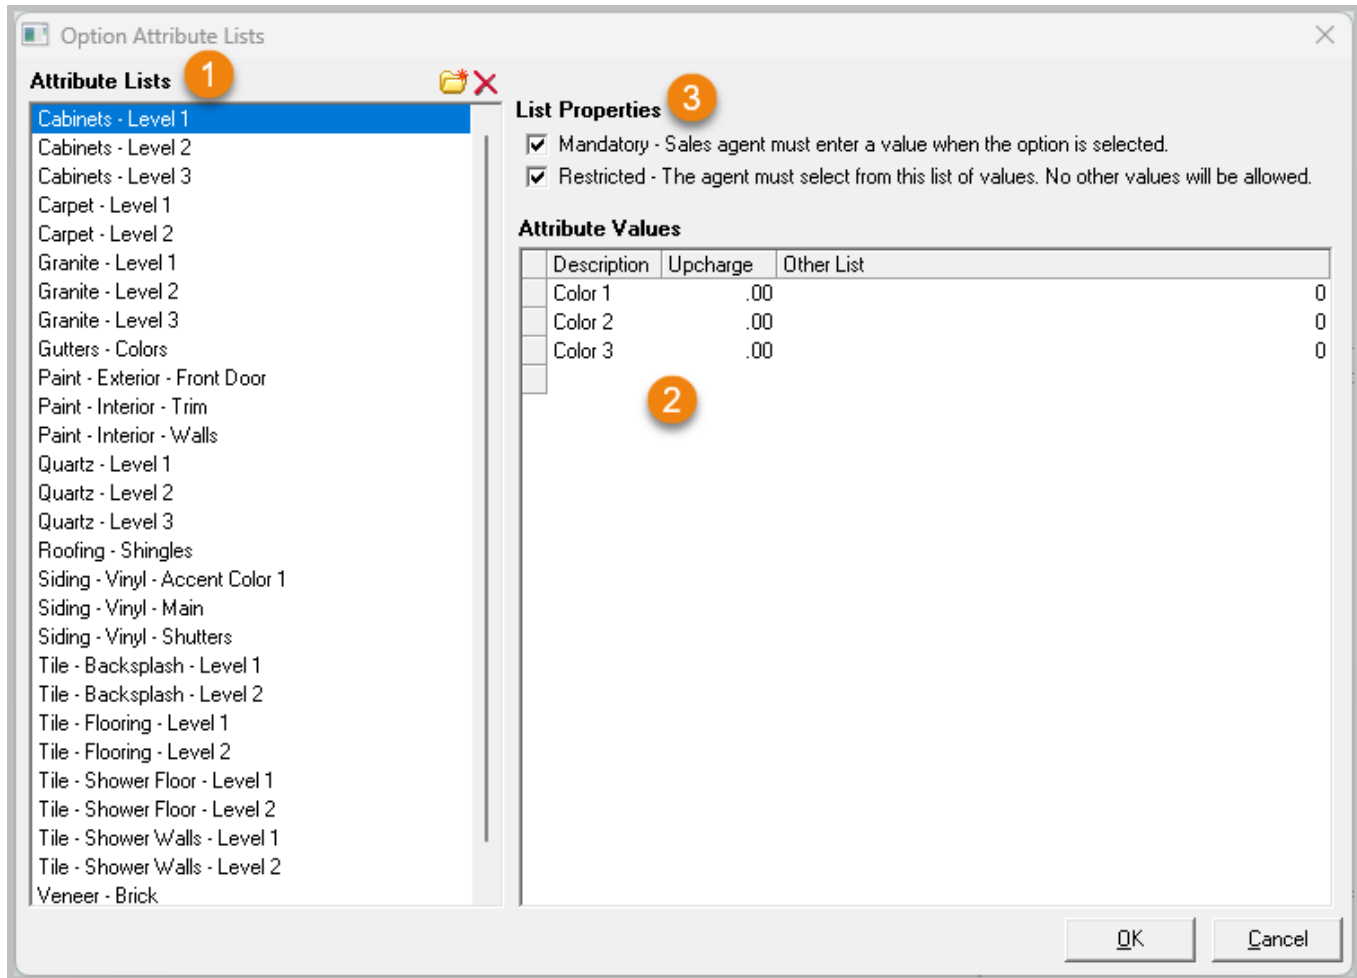

9.3.2 Option Attribute Lists and Values Menu

Attributes are created in Precision and published with the option to HomeFront Sales. Therefore, to require these attribute selections on a sale, the option must have been published on an estimating worksheet.

Precision/Setup/Option Attributes

Accessing the Option Attributes Menu will open the below window: (see examples of added Attribute Lists and Values)

Option Attribute Lists

Attribute Lists 1

- Cabinets - Level 1
- Cabinets - Level 2
- Cabinets - Level 3
- Carpet - Level 1
- Carpet - Level 2
- Granite - Level 1
- Granite - Level 2
- Granite - Level 3
- Gutters - Colors
- Paint - Exterior - Front Door
- Paint - Interior - Trim
- Paint - Interior - Walls
- Quartz - Level 1
- Quartz - Level 2
- Quartz - Level 3
- Roofing - Shingles
- Siding - Vinyl - Accent Color 1
- Siding - Vinyl - Main
- Siding - Vinyl - Shutters
- Tile - Backsplash - Level 1
- Tile - Backsplash - Level 2
- Tile - Flooring - Level 1
- Tile - Flooring - Level 2
- Tile - Shower Floor - Level 1
- Tile - Shower Floor - Level 2
- Tile - Shower Walls - Level 1
- Tile - Shower Walls - Level 2
- Veneer - Brick

List Properties 3

☒ Mandatory - Sales agent must enter a value when the option is selected.

☒ Restricted - The agent must select from this list of values. No other values will be allowed.

Attribute Values

Description	Upcharge	Other List
Color 1	.00	0
Color 2	.00	0
Color 3	.00	0

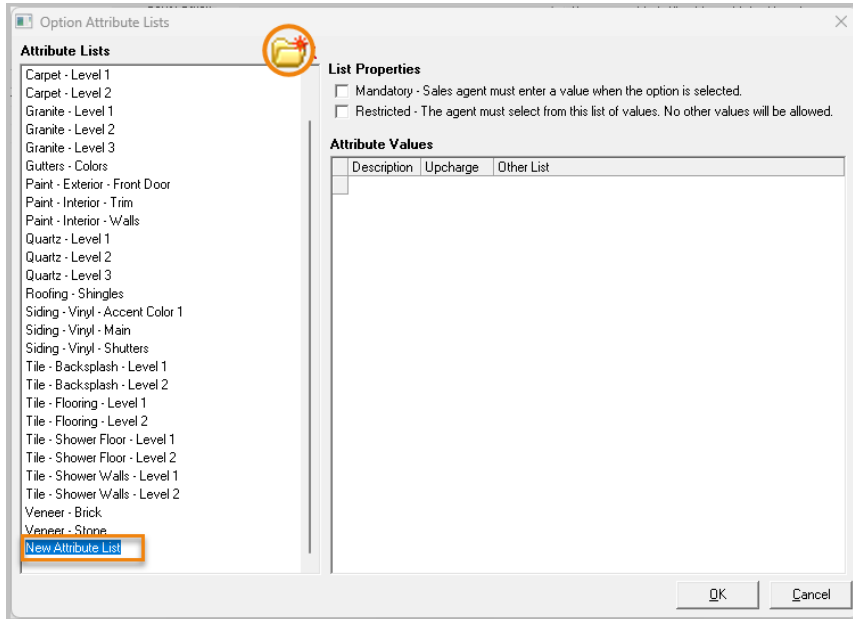

2

OK Cancel

1. User Defined Attribute Lists Pane
2. User Defined Attribute Values Pane
3. List Properties

9.3.3 Creating a New Attribute List

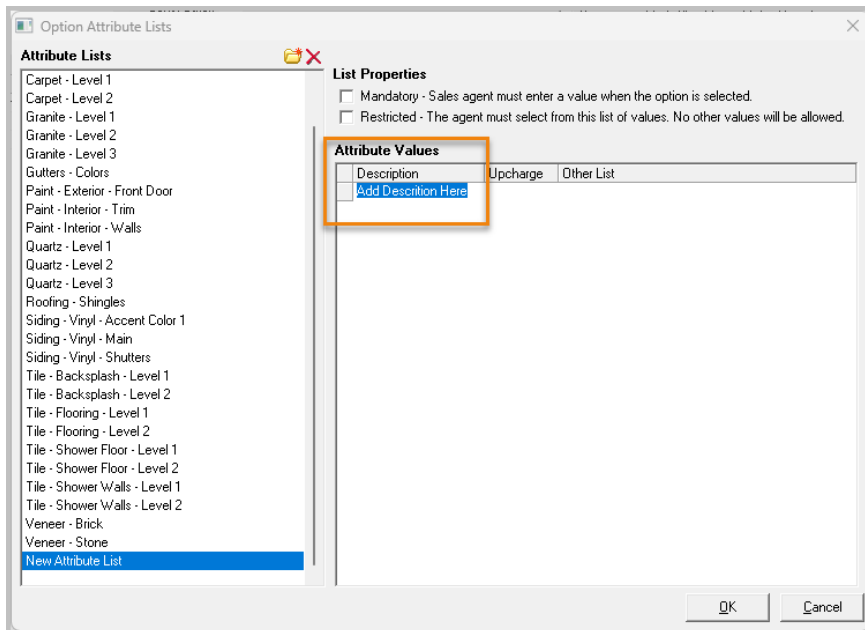

Add a new Attribute List by clicking the Add New icon magnified in the screen shot below:

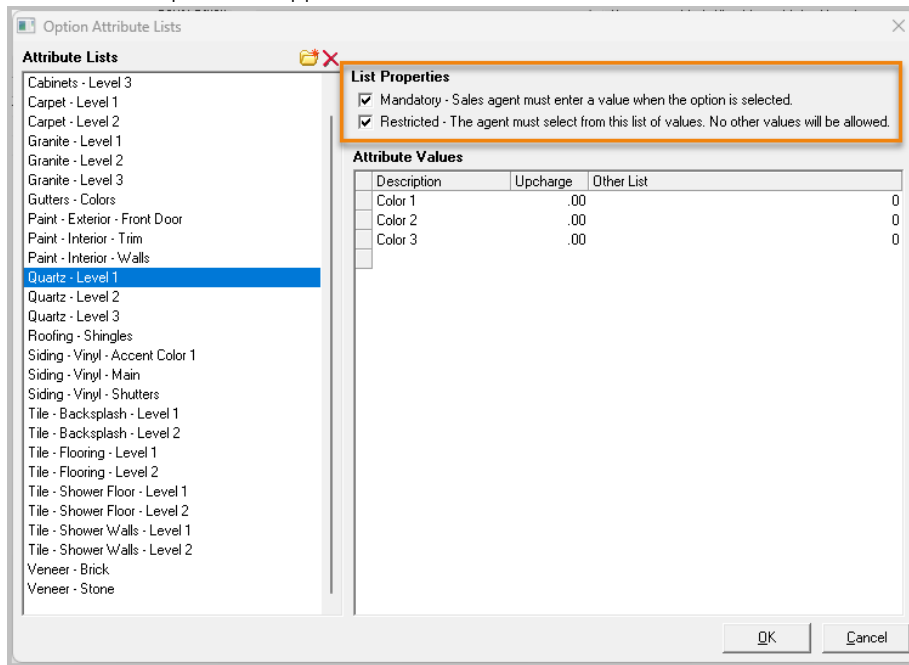

Rename the new Attribute List by highlighting or double clicking and typing in the name in the attribute list area.

9.3.4 Adding New Attribute Values

In the Attribute Values pane, enter the descriptions:

Select List Properties if applicable:

The dialog box 'Option Attribute Lists' shows a list of attribute categories on the left, with 'Quartz - Level 1' selected. On the right, the 'List Properties' section has two checked options: 'Mandatory - Sales agent must enter a value when the option is selected.' and 'Restricted - The agent must select from this list of values. No other values will be allowed.' Below this is a table of 'Attribute Values'.

Description	Upcharge	Other List
Color 1	.00	0
Color 2	.00	0
Color 3	.00	0

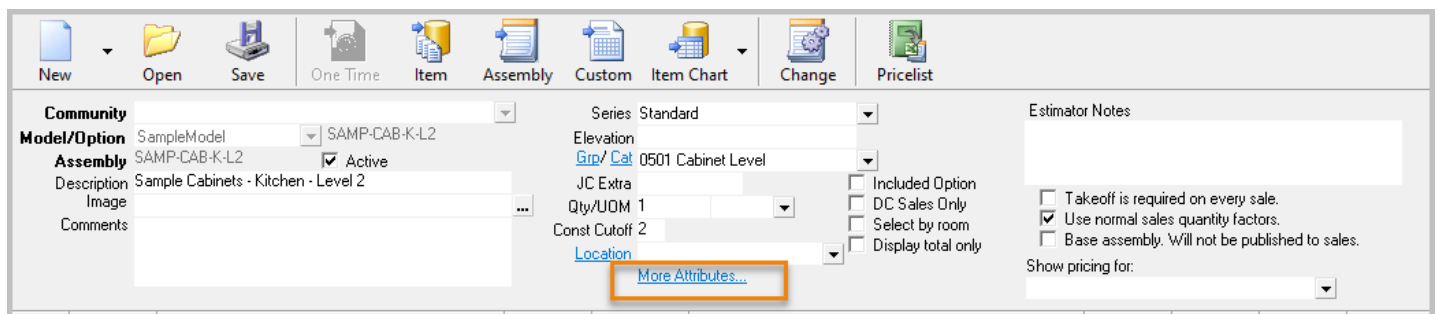

Mandatory – the selection must be made when selecting this option. Sales will not be able to continue without a selection being completed.

Restricted – sales must select a choice from the drop-down list. Without this checked, sales will be able to ‘free type’ any attribute choice.

9.3.5 Adding Attribute Lists to Options

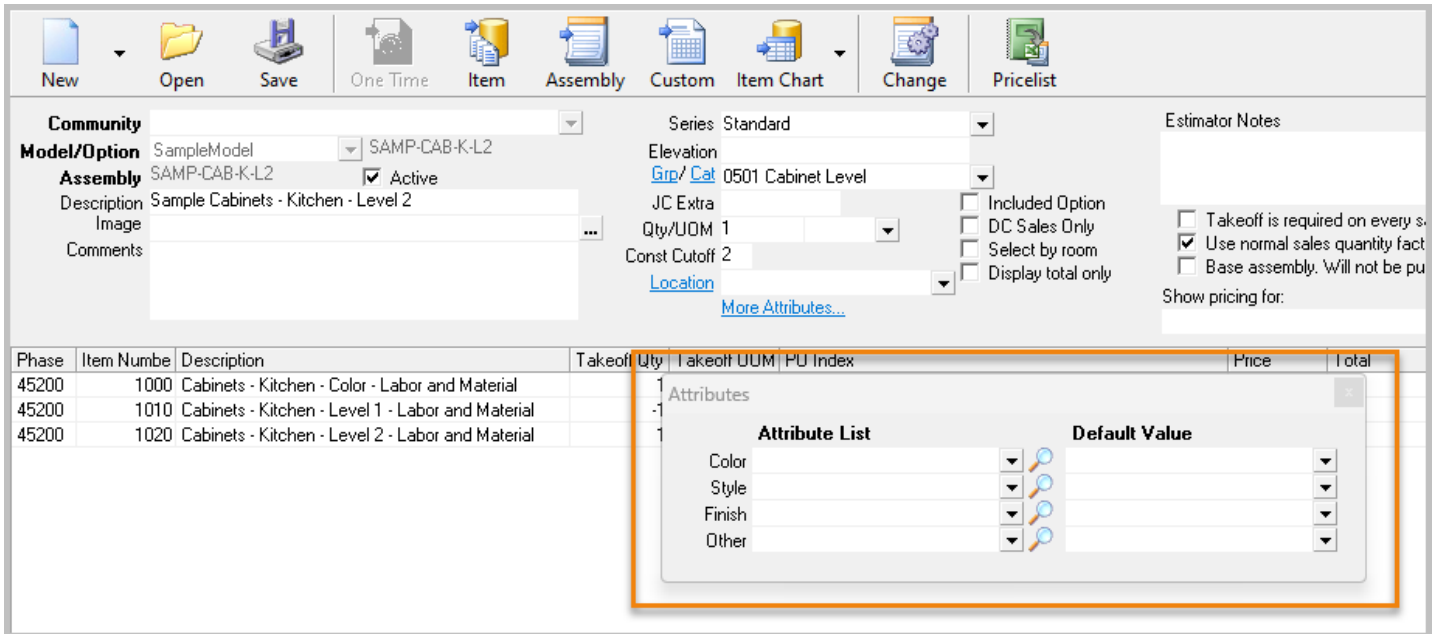

Precision/Setup/Edit Models and Options

To view and attach the option attributes, click on the “More Attributes” link when in “Edit Models and Options

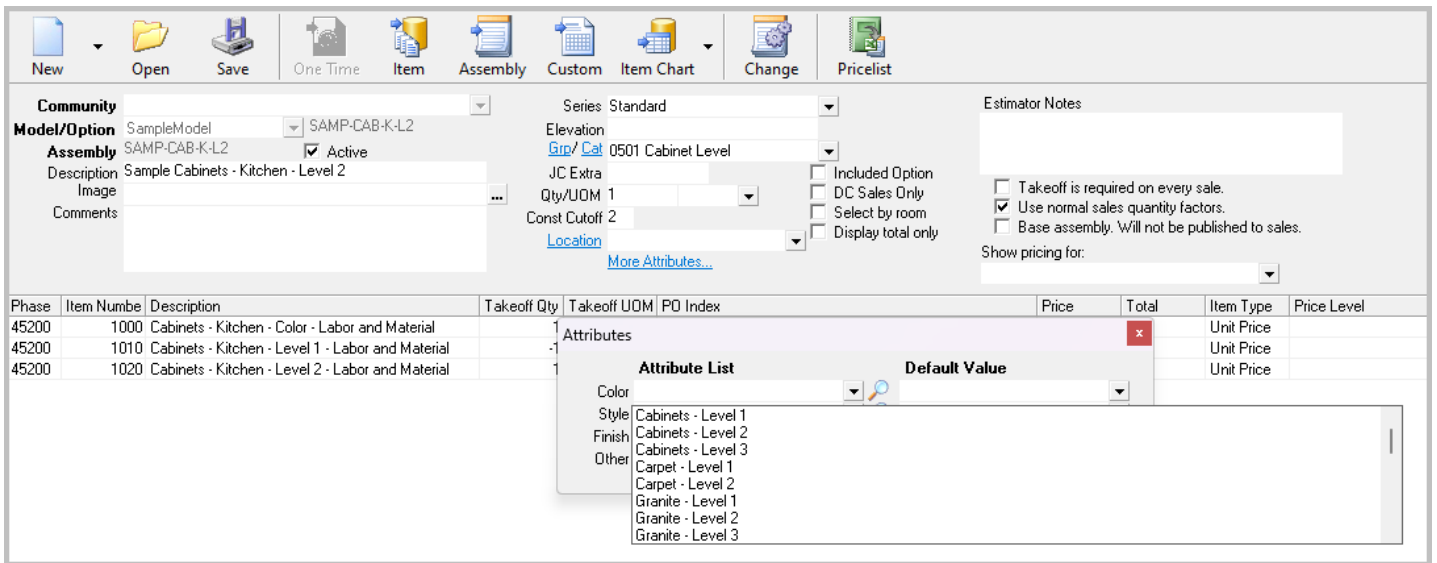

The software interface shows the 'Edit Models and Options' window. The 'Community' tab is active, showing a list of models. The 'SampleModel' is 'SAMP-CAB-K-L2'. The 'Assembly' is 'SAMP-CAB-K-L2' and is marked as 'Active'. The 'Description' is 'Sample Cabinets - Kitchen - Level 2'. The 'More Attributes...' link is highlighted with an orange box.

A blank Attributes selection window will appear.

Using the drop-down arrows, an attribute list and a default Value can be attached to each Attribute List field:

Once completed, the Attributes window can be closed.

After Attributes are added to an option, the option must be published on a worksheet to provide the attribute details within HomeFront Sales. (See section "Preparing an Estimating Worksheet").

Once the attributes have been chosen from the drop down, click save.

Ensure the Attribute is added to the option PRIOR to publishing the option to Sales. Adding an Attribute to an option will NOT automatically add the Attribute in HomeFront Sales. Items accepted from the Inbox prior to publishing the Attribute will not include the Attribute item.

9.4 Rooms

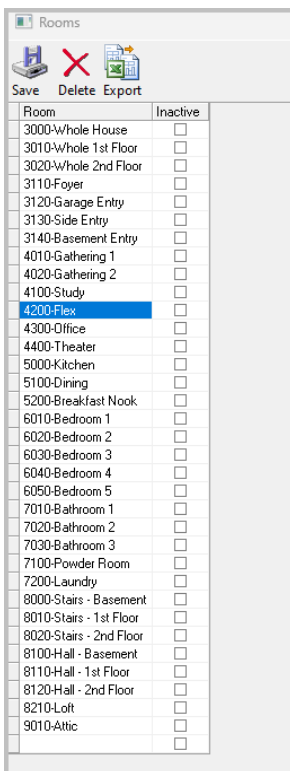

Room Functionality is designed to work with the HFS Selection Wizard. This enables a single **Global or Model Specific Option** to be selected for multiple locations having the system calculate the cost and retail based on the criteria entered.

9.4.1 Room Setup

Precision/Setup/Rooms

Manually enter Room Names in the Room Menu. SAVE upon completion.

Buttons: Add Model..., Add Room..., Delete

Buttons: Save, Close

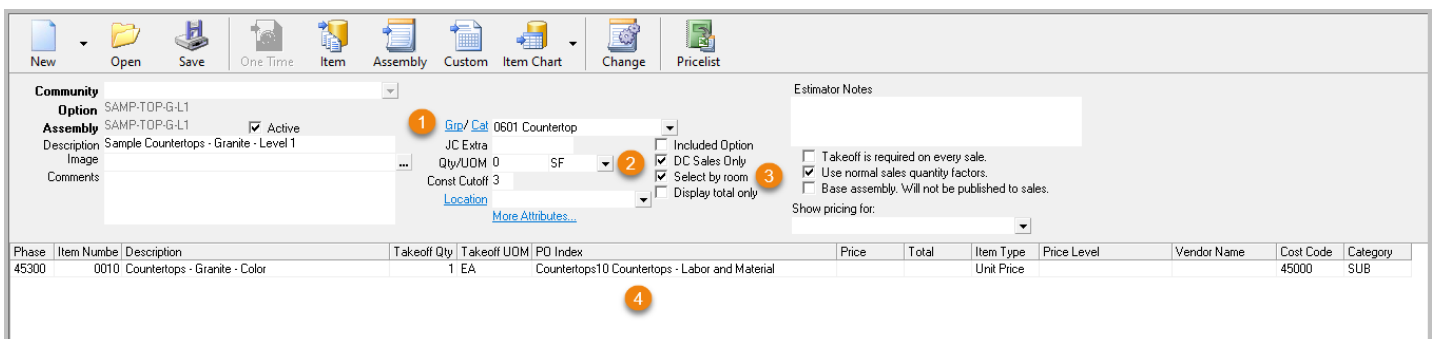

- A popup window will appear with available Models to select. After Model is selected, a second popup will appear with the Room list where Rooms can be multi-selected.
- Once the desired Rooms are added, enter the Qty for each Room/Category Combination.

9.4.4 Creating Assemblies with Rooms

Precision / Setup / Edit Models & Options

In the Global or Model Specific Option Header section, define or select the following:

Community: SAMP-TOP-G-L1

Option: SAMP-TOP-G-L1

Assembly: SAMP-TOP-G-L1

Description: Sample Countertops - Granite - Level 1

Image: [Blank]

Comments: [Blank]

Group/Category: 0601 Countertop

JC Extra: [Blank]

Qty/UOM: 0 SF

Const Cutoff: 3

Location: [Blank]

More Attributes: [Blank]

Included Option: [Blank]

DC Sales Only: [Checked]

Select by room: [Checked]

Display total only: [Checked]

Estimator Notes: [Blank]

Takeoff is required on every sale: [Checked]

Use normal sales quantity factors: [Checked]

Base assembly. Will not be published to sales: [Checked]

Show pricing for: [Blank]

Phase	Item Number	Description	Takeoff Qty	Takeoff UOM	PD Index	Price	Total	Item Type	Price Level	Vendor Name	Cost Code	Category
45300	0010	Countertops - Granite - Color	1	EA	Countertops10 Countertops - Labor and Material			Unit Price			45000	SUB

1. Select the Group/Category from the Dropdown
2. Enter the Unit of Measure. This should match the Unit of Measure defined in the applicable Dimension Category.
3. Check the "Select by room" box.
4. Create the Assembly. The takeoff should be a single unit that matches the UOM selected.

9.4.5 Publishing Global Options with Rooms

Precision / Sales Pricing / Open an Estimating Worksheet

Publish options with Rooms to Sales. If this option was previously not a room option, the assembly will need to be republished to sales. HFS will display the list of applicable rooms upon option selection.

9.5 Components

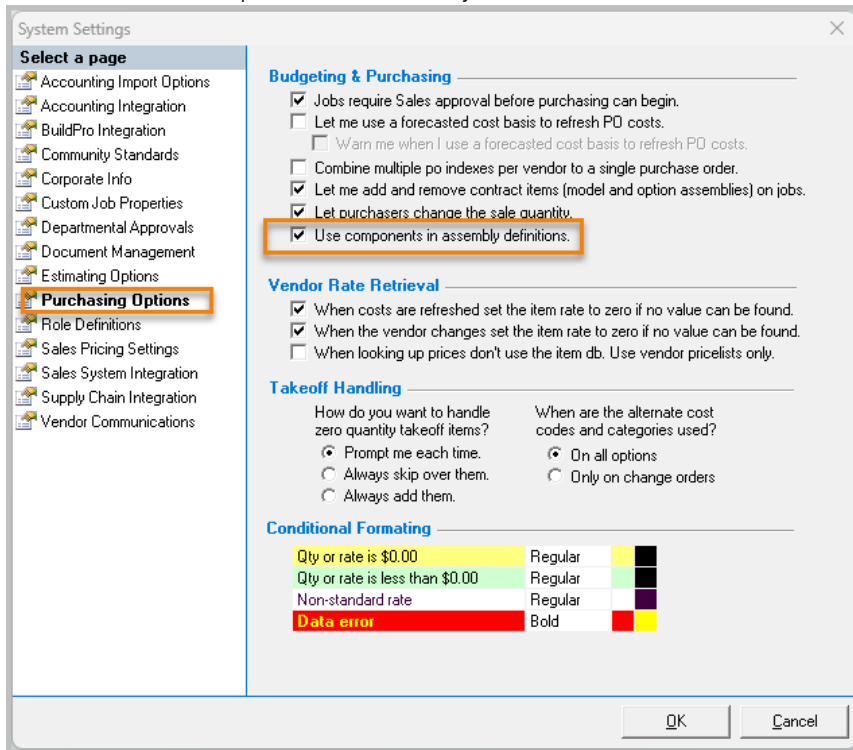

Components of an Assembly allow the user to add additional option assemblies to the main base model when in the Edit Models and Options window. Users may want to build the assembly using several components as “building blocks” or “assemblies within assemblies” to complete the total assembly. Components could be commonalities among all models such as budget items (i.e.: plan costs, lawyer fees, engineering costs etc.) In addition, there may be options that are included temporarily as incentives. Components allow the user to add the options without changing the base assembly.

9.5.1 Component Menu Set Up

Tools/System Settings/Purchasing Options

Enable the “Use components in assembly definitions” checkbox.

System Settings

Select a page

- Accounting Import Options
- Accounting Integration

Budgeting & Purchasing

- ☒ Jobs require Sales approval before purchasing can begin.
- ☐ Let me use a forecasted cost basis to refresh PO costs.
 - ☐ Warn me when I use a forecasted cost basis to refresh PO costs.
- ☐ Combine multiple po indexes per vendor to a single purchase order.
- ☒ Let me add and remove contract items (model and option assemblies) on jobs.
- ☒ Let purchasers change the sale quantity.
- ☒ Use components in assembly definitions.

Vendor Rate Retrieval

- ☒ When costs are refreshed set the item rate to zero if no value can be found.
- ☒ When the vendor changes set the item rate to zero if no value can be found.
- ☐ When looking up prices don't use the item db. Use vendor pricelists only.

Takeoff Handling

How do you want to handle zero quantity takeoff items?

- ☒ Prompt me each time.
- ☐ Always skip over them.
- ☐ Always add them.

When are the alternate cost codes and categories used?

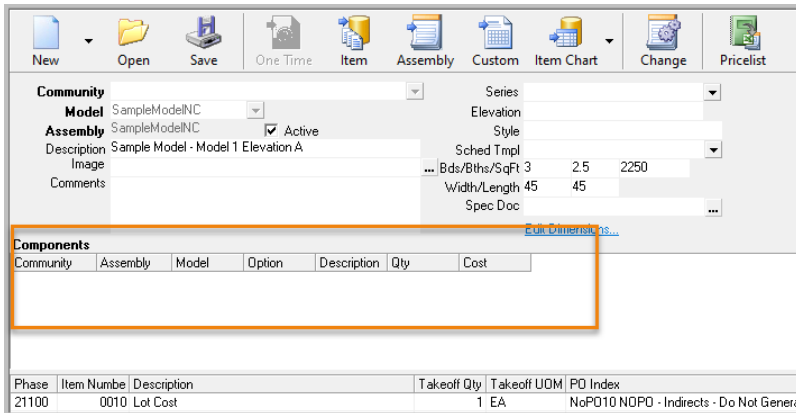

- ☒ On all options
- ☐ Only on change orders

Conditional Formatting

Qty or rate is \$0.00	Regular		
Qty or rate is less than \$0.00	Regular		
Non-standard rate	Regular		
Data error	Bold		

OK Cancel

The Edit Model and Options window will now reveal a Components section:

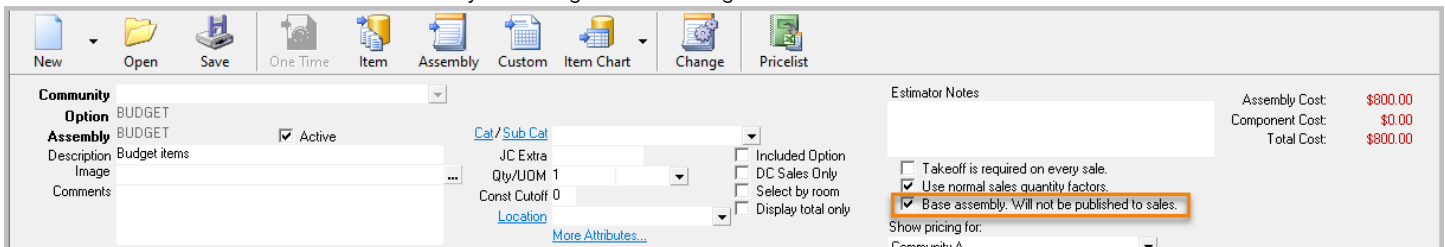

The screenshot shows the 'Edit Model and Options' window. The 'Components' section is highlighted with an orange box. It contains a table with columns: Community, Assembly, Model, Option, Description, Qty, and Cost. Below this, there is a table with columns: Phase, Item Number, Description, Takeoff Qty, Takeoff UOM, and PO Index. The data in the table is as follows:

Phase	Item Number	Description	Takeoff Qty	Takeoff UOM	PO Index
21100	0010	Lot Cost	1	EA	NoPO10 NOPD - Indirects - Do Not Generate

9.5.2 Using Components

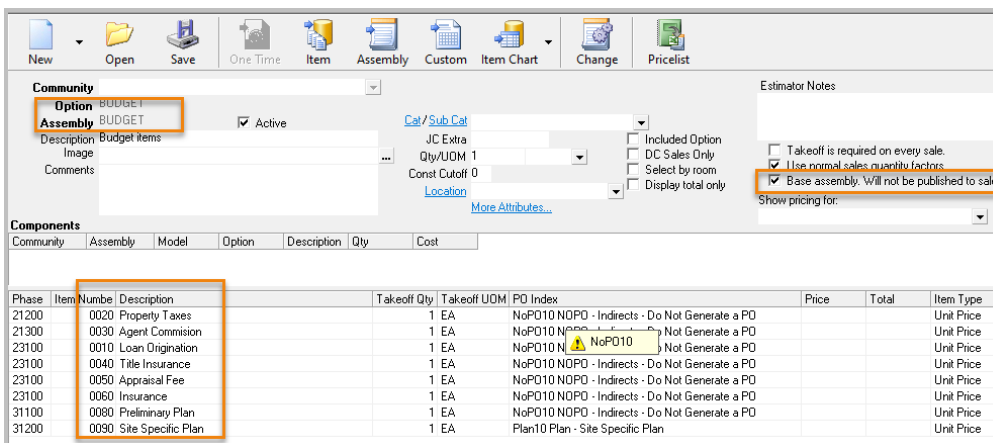

Components need to exist as an option (global or model specific) before they can be added to the model assembly. As components can be in addition to the base assembly, the option added to the component would not be a sellable option thus not available to sales. This is achieved by enabling the following checkbox:

The screenshot shows the 'Edit Model and Options' window. The 'Option' section is highlighted with an orange box. It contains a table with columns: Community, Assembly, Model, Option, Description, Qty, and Cost. Below this, there is a table with columns: Phase, Item Number, Description, Takeoff Qty, Takeoff UOM, and PO Index. The data in the table is as follows:

Phase	Item Number	Description	Takeoff Qty	Takeoff UOM	PO Index
21100	0010	Lot Cost	1	EA	NoPO10 NOPD - Indirects - Do Not Generate

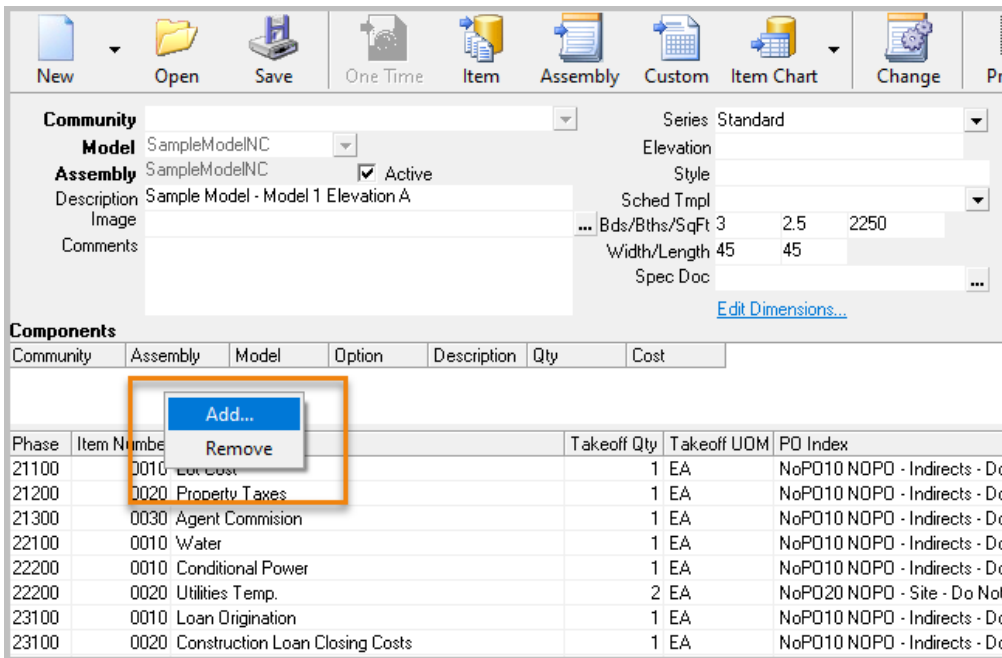

A Global Assembly has been created containing budget line items to be added to all model assemblies. This is created in the same form as a sellable global option:

The screenshot shows the 'Edit Model and Options' window. The 'Option' section is highlighted with an orange box. It contains a table with columns: Community, Assembly, Model, Option, Description, Qty, and Cost. Below this, there is a table with columns: Phase, Item Number, Description, Takeoff Qty, Takeoff UOM, and PO Index. The data in the table is as follows:

Phase	Item Number	Description	Takeoff Qty	Takeoff UOM	PO Index
21200	0020	Property Taxes	1	EA	NoPO10 NOPD - Indirects - Do Not Generate a PO
21300	0030	Agent Commission	1	EA	NoPO10 NOPD - Indirects - Do Not Generate a PO
23100	0010	Loan Origination	1	EA	NoPO10 NOPD - Indirects - Do Not Generate a PO
23100	0040	Title Insurance	1	EA	NoPO10 NOPD - Indirects - Do Not Generate a PO
23100	0050	Appraisal Fee	1	EA	NoPO10 NOPD - Indirects - Do Not Generate a PO
23100	0060	Insurance	1	EA	NoPO10 NOPD - Indirects - Do Not Generate a PO
31100	0080	Preliminary Plan	1	EA	NoPO10 NOPD - Indirects - Do Not Generate a PO
31200	0090	Site Specific Plan	1	EA	Plan10 Plan - Site Specific Plan

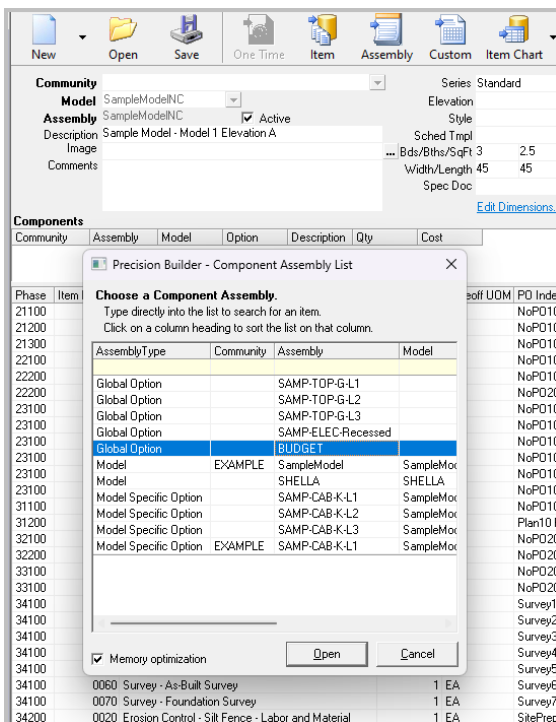

This Global assembly will now be added to a model assembly. Within the components box of the model, right click to display the “Add” menu:

The screenshot shows the 'Components' section of the software. A right-click context menu is open over the 'Add...' button, with options 'Add...' and 'Remove'. The background table lists various components with columns for Phase, Item Number, Description, Qty, Takeoff Qty, Takeoff UOM, and PO Index.

Phase	Item Number	Description	Qty	Takeoff Qty	Takeoff UOM	PO Index
21100	0010	Lot Cost	1	EA	NoP010 NOP0 - Indirects - Do	
21200	0020	Property Taxes	1	EA	NoP010 NOP0 - Indirects - Do	
21300	0030	Agent Commission	1	EA	NoP010 NOP0 - Indirects - Do	
22100	0010	Water	1	EA	NoP010 NOP0 - Indirects - Do	
22200	0010	Conditional Power	1	EA	NoP010 NOP0 - Indirects - Do	
22200	0020	Utilities Temp.	2	EA	NoP020 NOP0 - Site - Do Not	
23100	0010	Loan Origination	1	EA	NoP010 NOP0 - Indirects - Do	
23100	0020	Construction Loan Closing Costs	1	EA	NoP010 NOP0 - Indirects - Do	

A pick list to “Choose a Component Assembly” will appear. The Budget Global Option will be chosen:

The screenshot shows the 'Choose a Component Assembly' dialog box. It contains a table with columns for Assembly Type, Community, Assembly, and Model. The 'BUDGET' option is highlighted. The dialog also includes a search bar, a 'Memory optimization' checkbox, and 'Open' and 'Cancel' buttons.

Assembly Type	Community	Assembly	Model
Global Option		SAMP-TOP-G-L1	
Global Option		SAMP-TOP-G-L2	
Global Option		SAMP-TOP-G-L3

Community	Assembly	Model	Option	Description	Qty	Cost
	BUDGET		BUDGET	Budget item: 1		800.00

Phase	Item Number	Description	Takeoff Qty	Takeoff UOM	PO Index	Price	Total	Item Type	Pric
21100	0010	Lot Cost	1	EA	NoPO10 NOPD - Indirects - Do Not Generate a PO	100	100.00	Quote	Glo
21200	0020	Property Taxes	1	EA	NoPO10 NOPD - Indirects - Do Not Generate a PO	100	100.00	Unit Price	Con

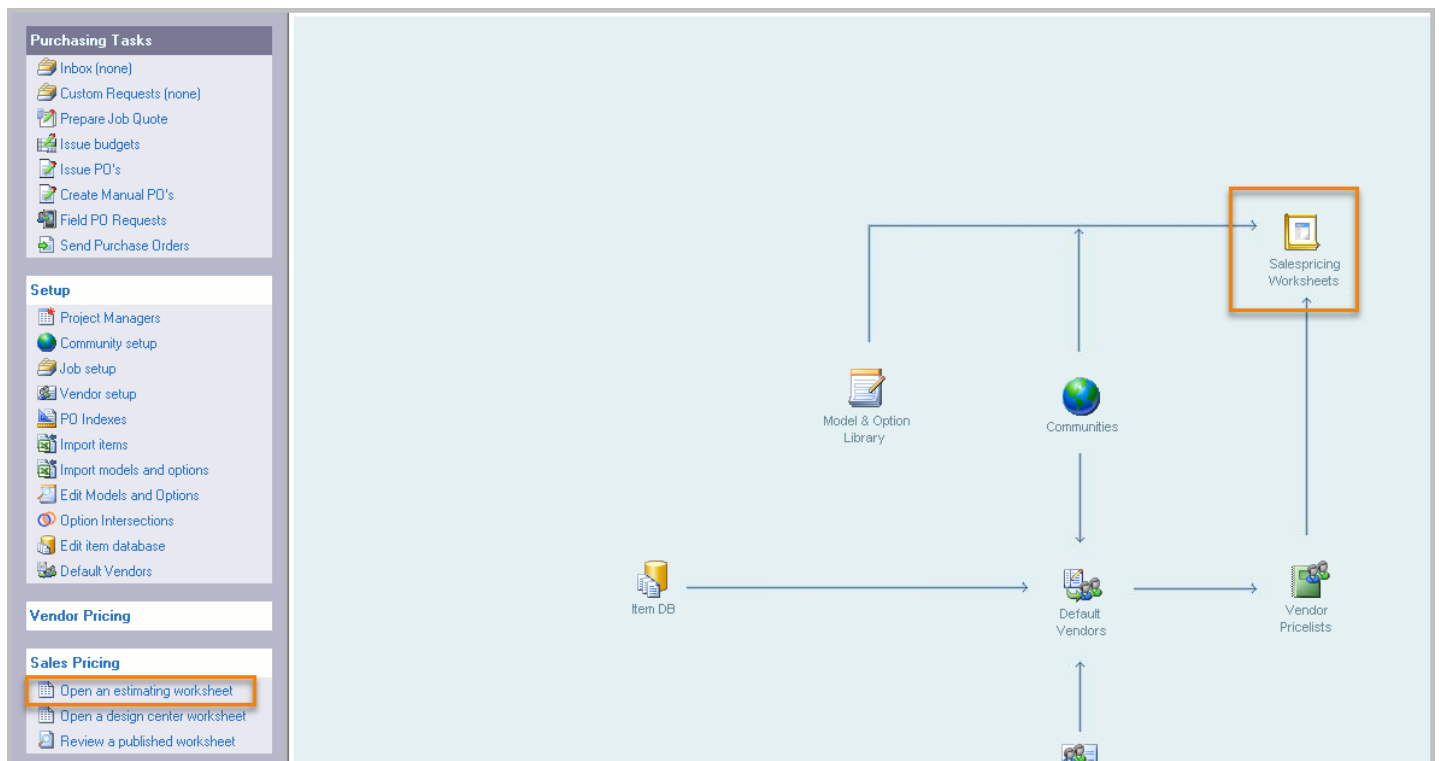

If this is a change to an existing Model, the next step would be to publish the model on an estimating worksheet again. The Job record will present the component items blended with the rest of the job items. There is no defining column label to split out the component items.

10.0 WORKSHEETS

Estimating worksheets are used for pricing analysis of models and options and to produce or update retail pricing and assembly changes.

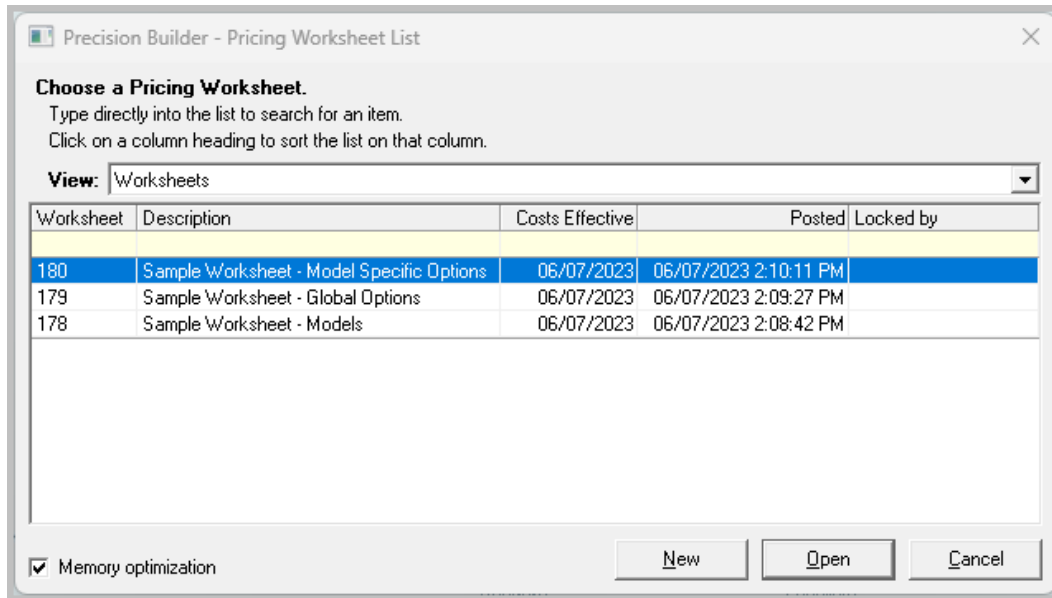

The purpose of worksheets is to create a Sales record from the completed Assemblies. To complete this task an assembly is added to a worksheet and Published to Sales with a Retail value. This record would now be available within the Sales platform to either complete a Pre-Sale or an Inventory Home. ***Without this process, Sales records will not be available.***

Worksheets can be accessed from the left task bar or the workflow.

Upon choosing this menu, the Pricing Worksheet List will open.

10.1 Creating a new worksheet

Precision Builder - Pricing Worksheet List

Choose a Pricing Worksheet.
Type directly into the list to search for an item.
Click on a column heading to sort the list on that column.

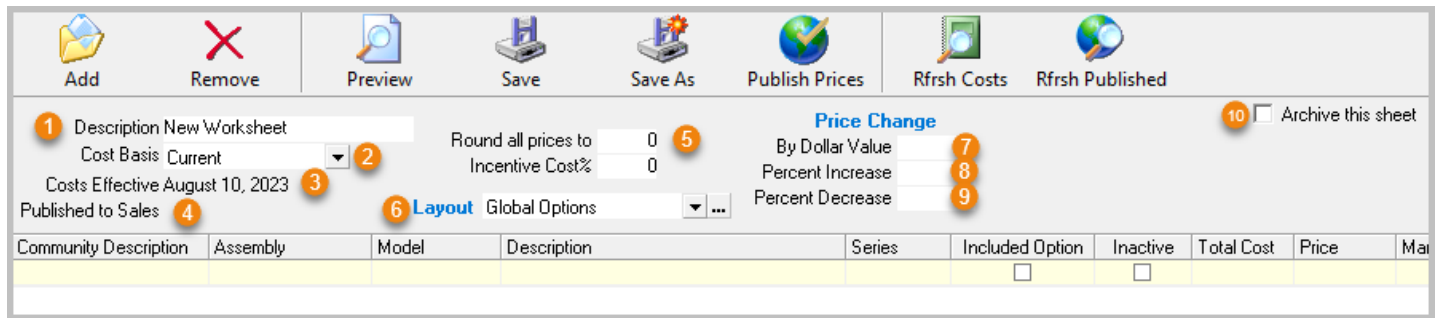

View: Worksheets

						☐	☐			

- Description:** Describe the worksheet in this field.
- Cost Basis:** Select the cost basis in this field from the drop down. Every sales worksheet must be assigned a Cost Basis. The Cost Basis is a price forecasting schedule for the model and option assemblies. The choices for the Cost Basis are:
 - Current:** current price charged by the vendors
 - Next 1:** First Next price that is due to come into effect by the vendors
 - Next 2:** Second Next price that is due to come into effect by the vendors
 - Last 1:** Most recent price charged by the vendors prior to the current price
 - Last 2:** second Most recent price charged by the vendors prior to the current price
 - Last 3:** third Most recent price charged by the vendors prior to the current price
- Costs Effective:** date of worksheet created.
- Published to Sales:** Date this worksheet was published.
- Round all prices to:** rounds selling prices by the amount entered.

6. **Layout:** This field defaults to General. Additional layouts for worksheets can be created by choosing the ellipsis next to the drop-down arrow.
7. **Price Change** – By Dollar Value: changes selling price by amount entered
8. **Price Change** – Percent Increase: changes selling price by amount entered
9. **Price Change** – Percent Decrease: changes selling price by amount entered
10. **Archive this sheet:** Will move the current sheet into the Archive list
11. **Save**

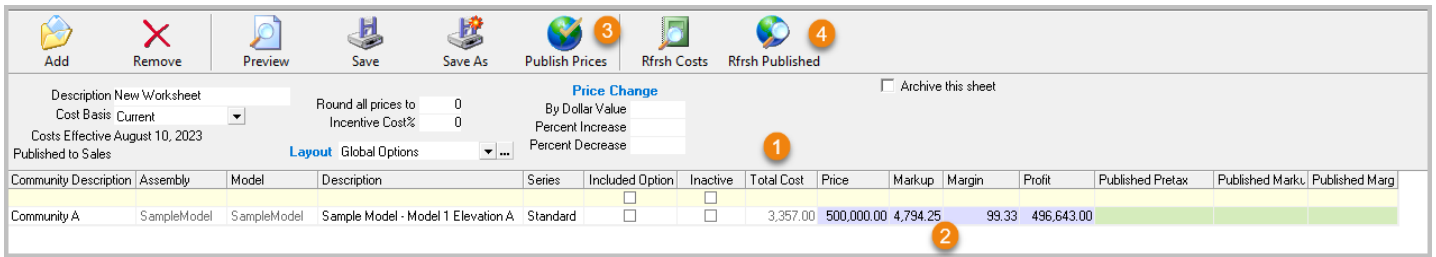

To add assemblies to the Estimating Worksheet window, click **Add**. Assembly List dialog opens
In the Assembly List dialog, select the assemblies to add to the Worksheet and choose OPEN.

When selecting the assemblies to build the Worksheet, below are suggestions on the criteria:

- A worksheet that only has Model assemblies
- A worksheet that only has Model Option assemblies
- A worksheet that only has Global Option assemblies
- A worksheet that only has a Model assembly and its Model Specific Options

Ensure column headers are reviewed to view any applicable data as the columns may be default.

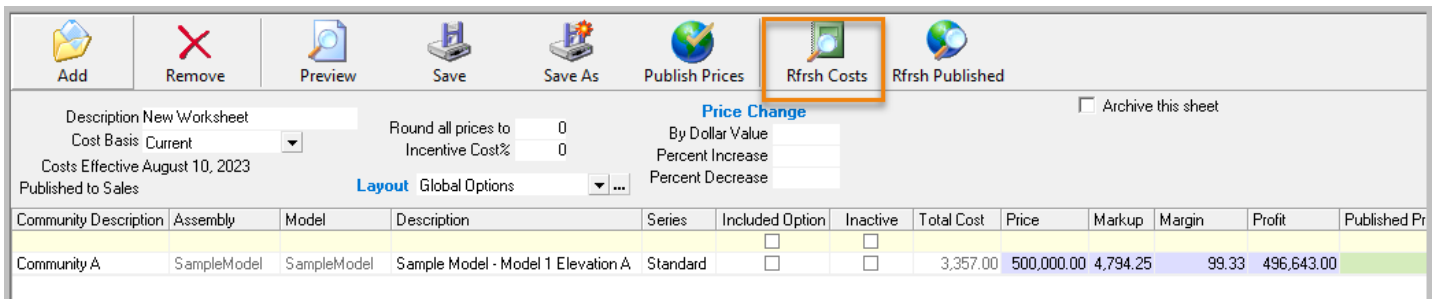

Community Description	Assembly	Model	Description	Series	Included Option	Inactive	Total Cost	Price	Markup	Margin	Profit	Published Pretax	Published Marku	Published Marg
Community A	SampleModel	SampleModel	Sample Model - Model 1 Elevation A	Standard	☐	☐	3,357.00	500,000.00	4,794.25	99.33	496,643.00			

1. **Total Cost:** as per the cost basis chosen.
 2. Available fields to calculate retail amounts. By entering a value in one of the following fields, the other three fields will automatically calculate:
 - **Price:** Enter a retail amount for sales
 - **Margin:** Enter a percentage value
 - **Markup:** Enter a dollar value
 - **Profit:** Enter a dollar value
 3. To update the sales center with the results from the new worksheet, **publish** the worksheet. Publishing will update Profit Builder/HFS with the new Worksheet retail amounts. The new worksheet will be available to the sales center immediately within Profit and after the next data transfer to HFS.
 4. The most recent published data can be reviewed by choosing **refresh published**. Viewable in the Published columns.
- **To define settings for the sales worksheets, see Sales Pricing Setting Settings in System Set Up**.**

10.2 Refreshing Costs on an existing worksheet

Assembly costs will change due to price increases from vendors, take off edits etc. This may affect the selling price or assembly that is published with the sales record. As well, assembly items, default vendors or other data (excluding prices) may change. The revised assembly should then be published to ensure the correct assembly will be attached to the sales record.

To refresh costs, attributes and Sales Groups and Categories the “Refresh Costs” icon can be used.

Community Description	Assembly	Model	Description	Series	Included Option	Inactive	Total Cost	Price	Markup	Margin	Profit	Published Pretax	Published Marku	Published Marg
Community A	SampleModel	SampleModel	Sample Model - Model 1 Elevation A	Standard	☐	☐	3,357.00	500,000.00	4,794.25	99.33	496,643.00			

10.3 Worksheet Preview Report

Completed Worksheets can be viewed in PDF form by choosing the “Preview” icon.

Description New Worksheet		Round all prices to 0		Price Change		☐ Archive this sheet	
Cost Basis Current		Incentive Cost% 0		By Dollar Value

11.0 PROCESSING JOB RECORDS

This process will begin after a Presale, Inventory Home or Change Order has been created and approved within HFS. The published assemblies/Sales records will have been used to create the Pre-Sale. Inventory Home or Change Order. If the assembly was published with missing items, inaccurate take-offs etc., the Job Record will replicate the same inaccuracies. However, HomeFront allows for changes and updates within the job record.

11.1 Job Budgets (Issue Budgets)

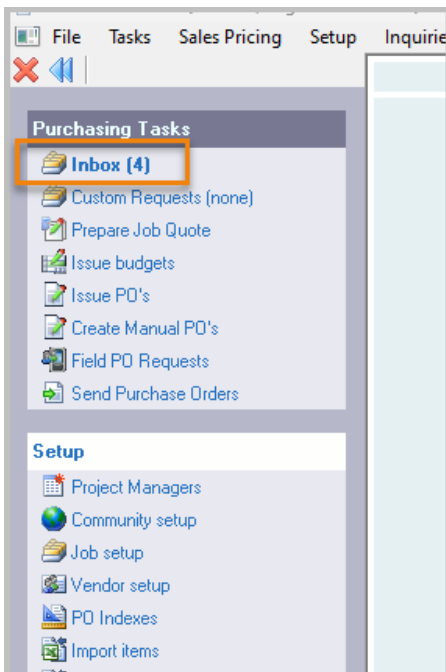

Job **Budgets** are created from the **Assemblies** in **Edit Models and Options** and in theory should match the original assembly of the model and any options sold for the contract. The job budget creates a cost guideline.

The process would be as follows:

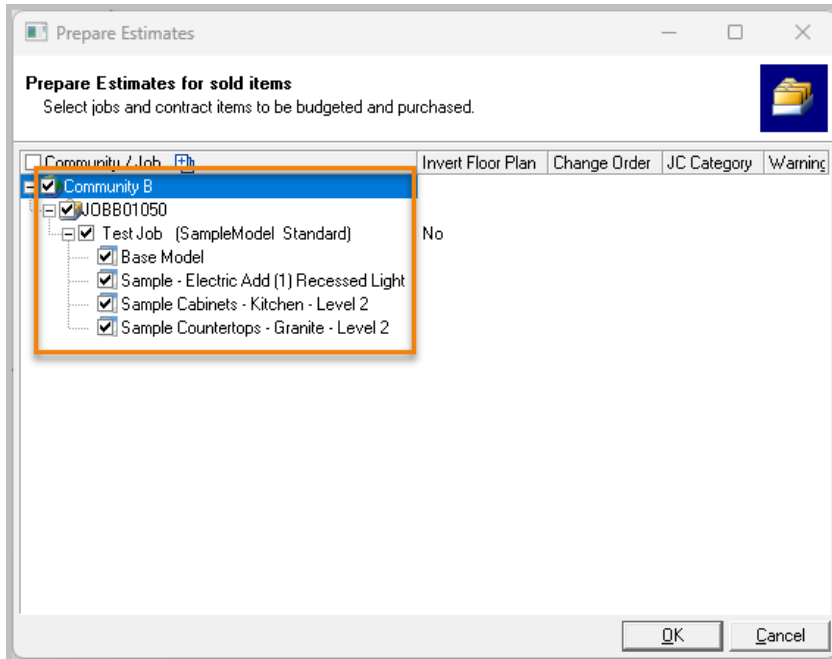

1. Accept the Job from the Inbox
2. Review and Generate the Job Budget
3. Finalize the Budget (creates ability to lock the budget and add variance purchase orders)

11.1.2 Creating and Generating Budgets from an approved Sales Contract

To create and generate a budget from a Sales Contract a Job is required. A Job can be created through the approval of a Sales Contract from Profit Builder/HFS. When the Sales Contract has been approved, it will initially sit in the **Inbox** of **Precision Builder**. The figure below shows Inbox having four assemblies.

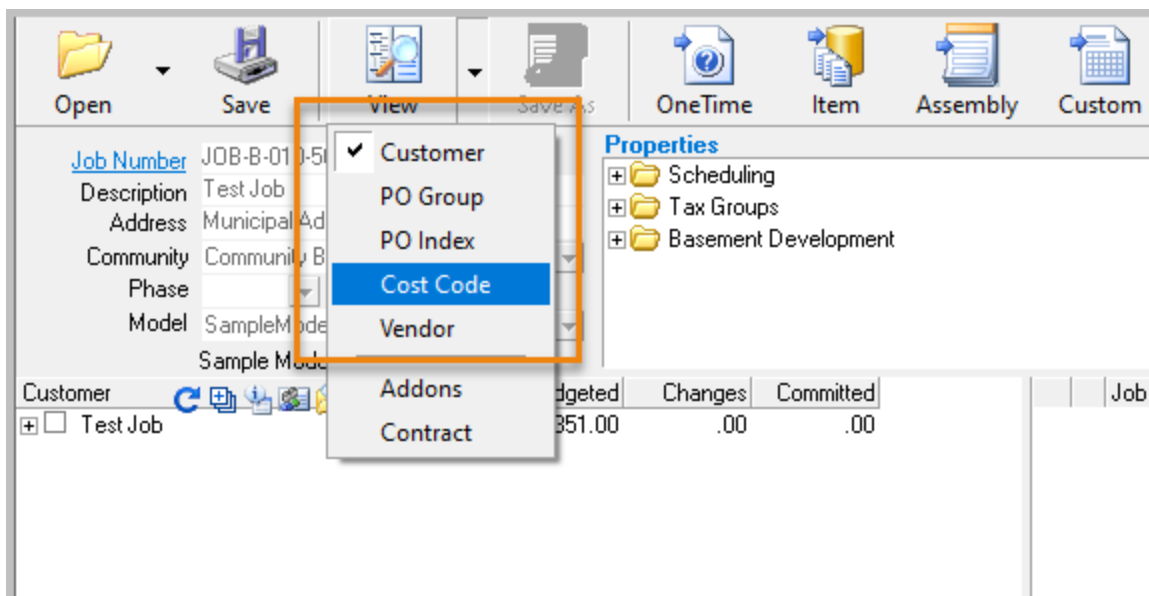

After double clicking on the **Inbox**, the Job is now ready for budget creation and the **Prepare Estimates** dialog opens. In the **Prepare Estimates** dialog, select the Job to prepare a Budget for.

After selecting the Job, click **OK** on the **Prepare Estimates** dialog. The **Issue Budget** window will open displaying the Job record.

In the **Issue Budget** window, review and edit the line items of the Job if applicable. See **MODIFYING GRIDS AND LINE ITEMS** to adjust column headers and data.

Multiple views of the job record data are available:

Customer view: all assemblies included in the contract.

Save changes and the selected items have greyed out, therefore cannot be edited.

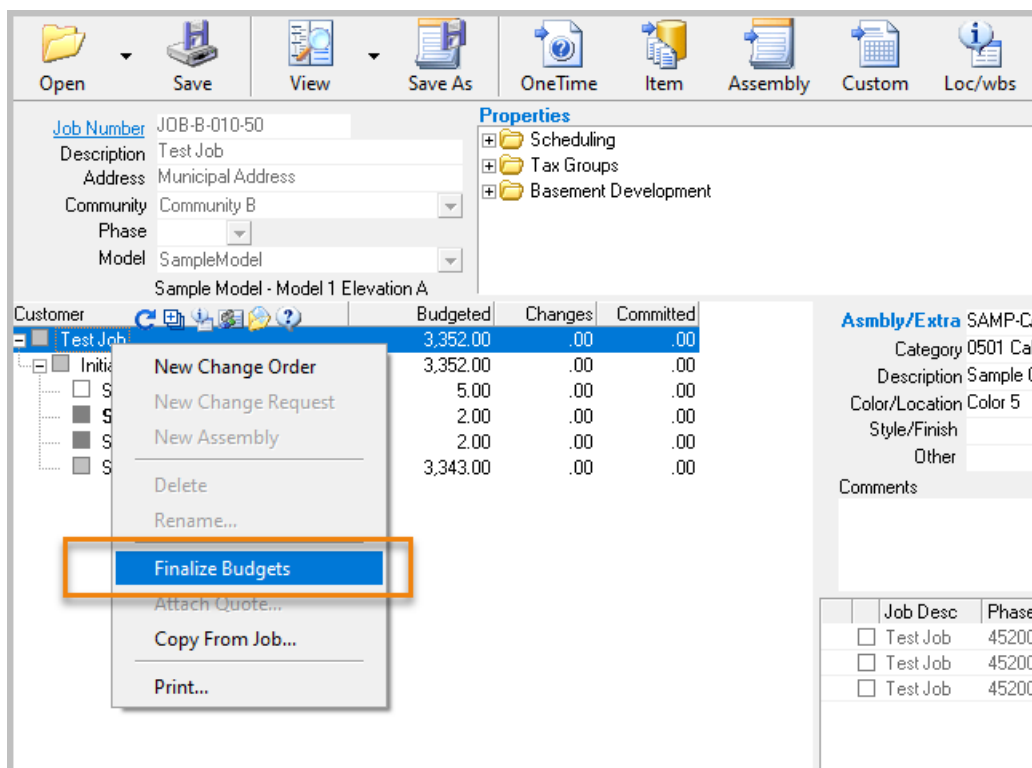

As shown by the below example, the Budget is **GENERATED** but not **LOCKED**. To view the LOCK status, **view by Customer** and double click on an assembly in the left pane.

Customer	Budgeted	Changes	Committed
Test Job	3,352.00	.00	.00
Initial Contract	3,352.00	.00	.00
Sample - Electric Add (1) Rec...	5.00	.00	.00
Sample Cabinets - Kitch...	2.00	.00	.00
Sample Countertops - Granite...	2.00	.00	.00
Sample Model - Model 1 Elev...	3,343.00	.00	.00

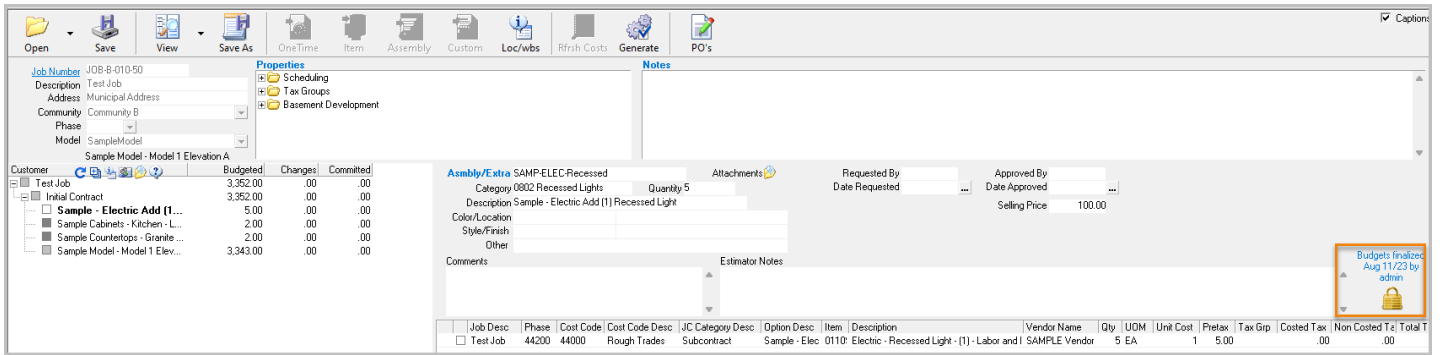

11.1.3 Finalize (Lock) Generated Budgets

Finalizing (Locking) Budgets can be completed at a Job level or an assembly level. The different levels allow the user to Finalize a job all at once or individual assemblies as they would be within a Change Order. In the **Customer view**, right click on the top level of the Job and choose **Finalize Budgets**:

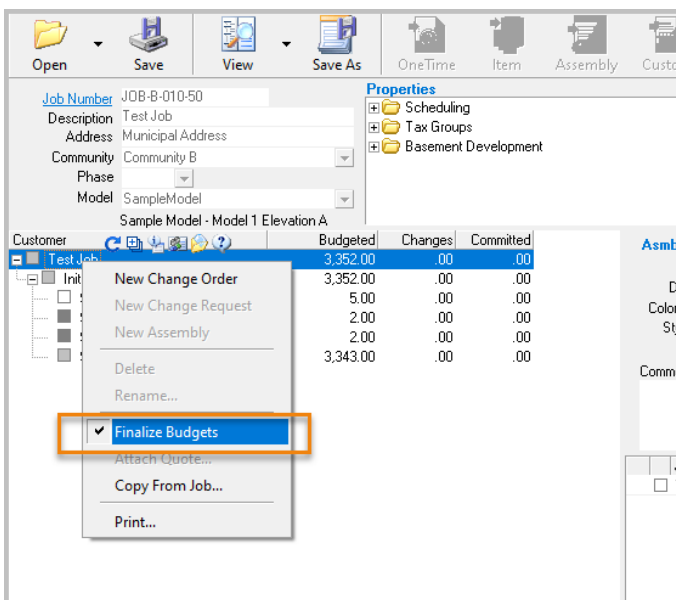

Customer	Budgeted	Changes	Committed
Test Job	3,352.00	.00	.00
Initial Contract	3,352.00	.00	.00
Sample - Electric Add (1) Rec...	5.00	.00	.00
Sample Cabinets - Kitch...	2.00	.00	.00
Sample Countertops - Granite...	2.00	.00	.00
Sample Model - Model 1 Elev...	3,343.00	.00	.00

To view if a budget is Finalized, in **Customer view**, double click on the first main assembly:

Customer	Budgeted	Changes	Committed
Test Job	3,352.00	.00	.00
Initial Contract	3,352.00	.00	.00
Sample - Electric Add (1...	5.00	.00	.00
Sample Cabinets - Kitchen - L...	2.00	.00	.00
Sample Countertops - Granite ...	2.00	.00	.00
Sample Model - Model 1 Elevat...	3,343.00	.00	.00

To UN Finalize the Budget, right click on the top level again and **uncheck** Finalize Budgets

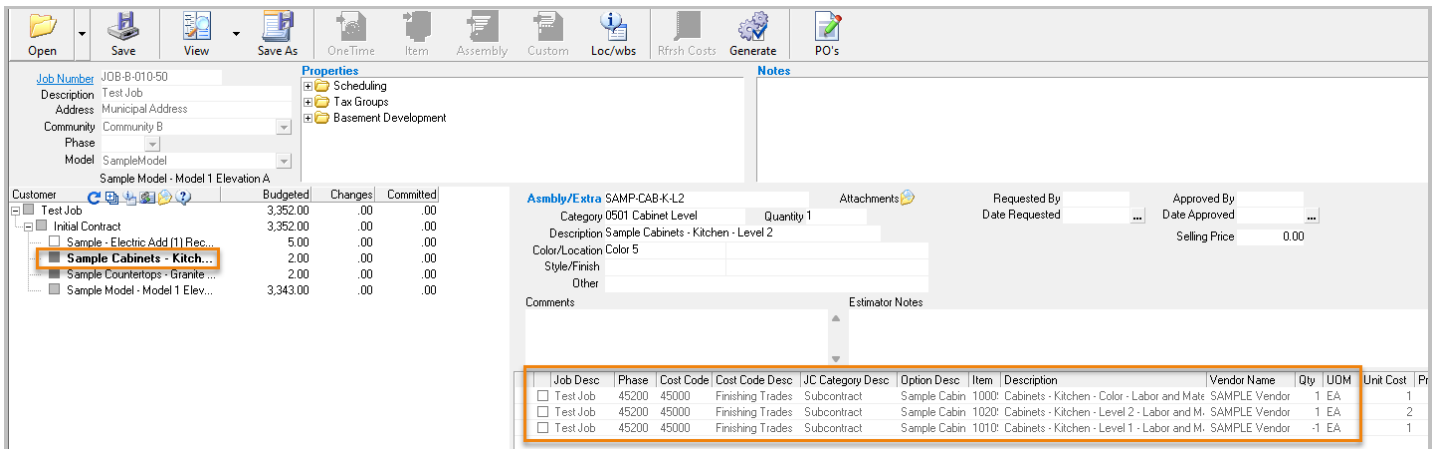

Un Finalizing the Budget is a setting in User Permissions and can be adjusted for specific Users.

11.1.4 Cancelling a Budget

It is Best Practice to create **Variance Purchase Orders** even if there are Budget errors. Variances track not only errors, but Price Increases as well as price changes due to Vendor changes. There are, however, instances when a Budget needs to be cancelled and re generated. **To cancel a budget, it MUST NOT BE FINALIZED**

To cancel a budget on an item, **Double click** on the **assembly** including the budget to be cancelled. The items will show in the right pane:

Customer

	Budgeted	Changes	Committed
Test Job	3,352.00	.00	.00
Initial Contract	3,352.00	.00	.00
Sample - Electric Add (1) Rec...	5.00	.00	.00
Sample Cabinets - Kitch...	2.00	.00	.00
Sample Countertops - Granite ...	2.00	.00	.00
Sample Model - Model 1 Elev...	3,343.00	.00	.00

Test Job	45200	45000	Finishing T		

To cancel the Budget for the entire Assembly, select all items and repeat the above process.

11.2 Purchase Orders (Issue PO's)

It is best practice to generate Purchase Orders (PO's) after the Budget has been generated, however it is possible to generate POs for a Job before its Budget has been generated. Whether the Budget is generated or not, the creation and generation of PO's is the same.

After the Job Budget has been completed, easily change to the Issue PO screen of the same job by choosing the PO Icon.

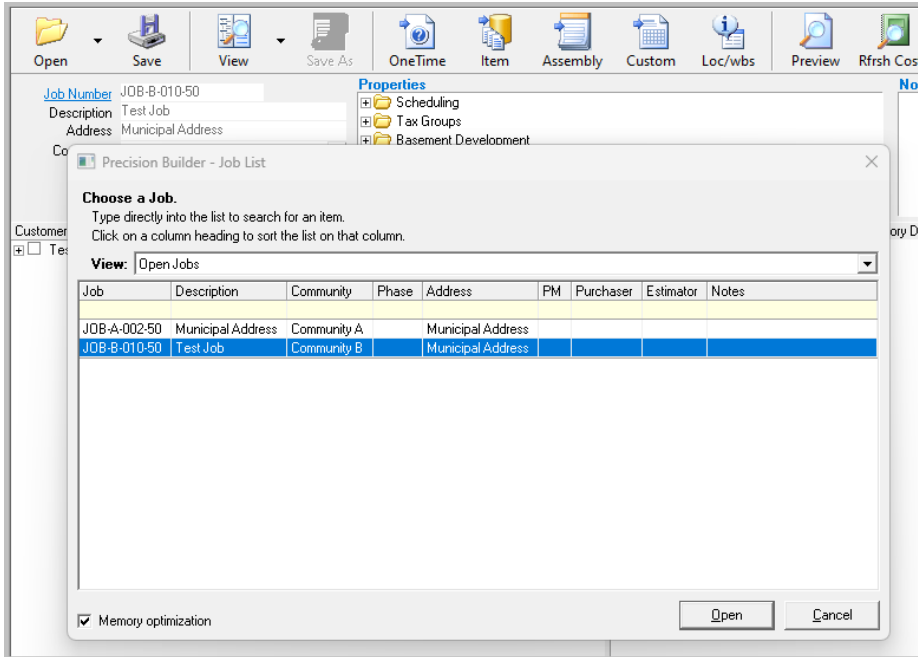

The screenshot shows the Hyphen HomeFront software interface. The top toolbar contains several icons: Open, Save, View, Save As, OneTime, Item, Assembly, Custom, Loc/wbs, Rfrsh Costs, Generate, and PO's. The PO's icon is highlighted with an orange box. Below the toolbar, the 'Job Number' is J08-B-010-50. The 'Description' is Test Job. The 'Address' is Municipal Address. The 'Community' is Community B. The 'Phase' is a dropdown menu. The 'Model' is SampleModel. The 'Sample Model - Model 1 Elevation A' is selected. The 'Properties' section shows a tree view with folders for Scheduling, Tax Groups, and Basement Development. The 'Notes' section is empty. Below the Properties and Notes sections, there is a table with columns: Customer, Budgeted, Changes, Committed, Job Desc, Phase, Cost Code, Cost Code Desc, JC Category Desc, and O. The table contains data for Test Job, Initial Contract, and Sample - Electric Add (1) Rec....

Customer	Budgeted	Changes	Committed	Job Desc	Phase	Cost Code	Cost Code Desc	JC Category Desc	O
Test Job	3,352.00	.00	.00						
Initial Contract	3,352.00	.00	.00						
Sample - Electric Add (1) Rec...	5.00	.00	.00						
Sample Cabinets - Kitchen - L...	2.00	.00	.00						
Sample Countertops - Granite ...	2.00	.00	.00						
Sample Model - Model 1 Elev...	3,343.00	.00	.00						

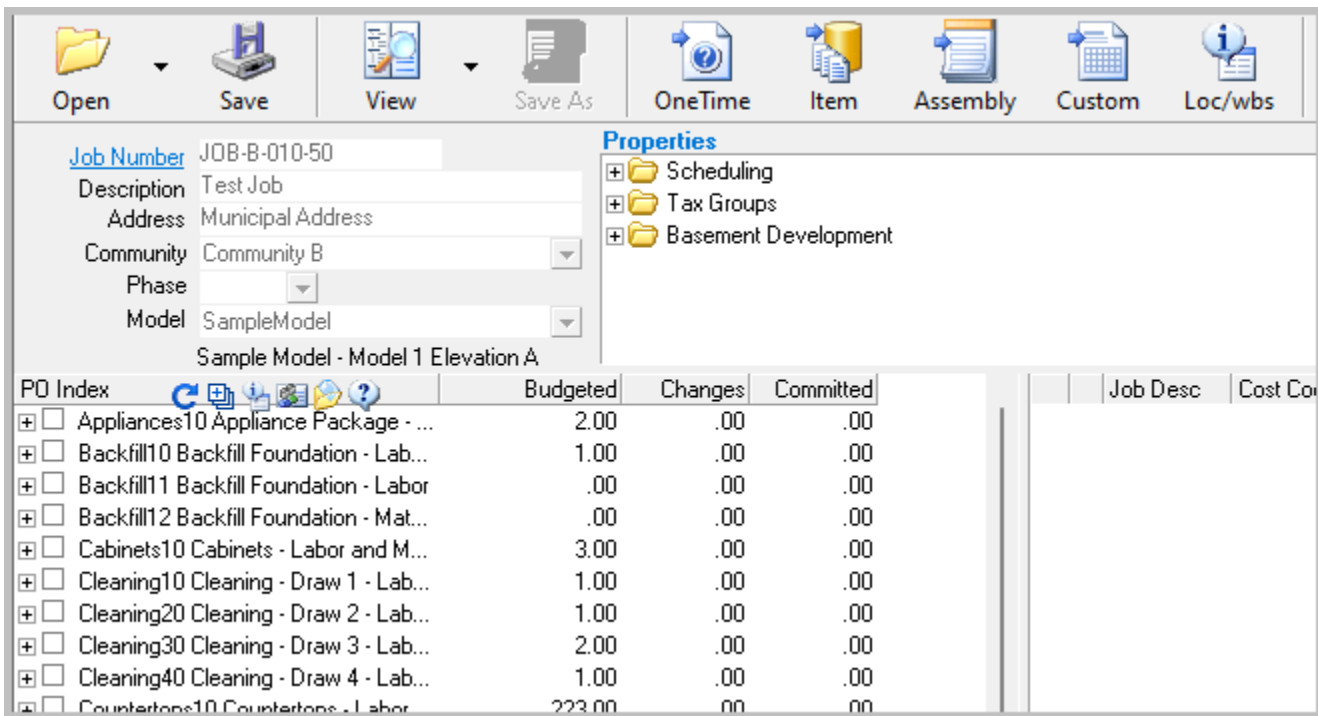

11.2.1 Creating and Generating Purchase Orders by Job

With the **Issue PO's** window open, a different job can be selected using the **Open** button. From the Job List dialog, select and open the Job to generate the POs for.

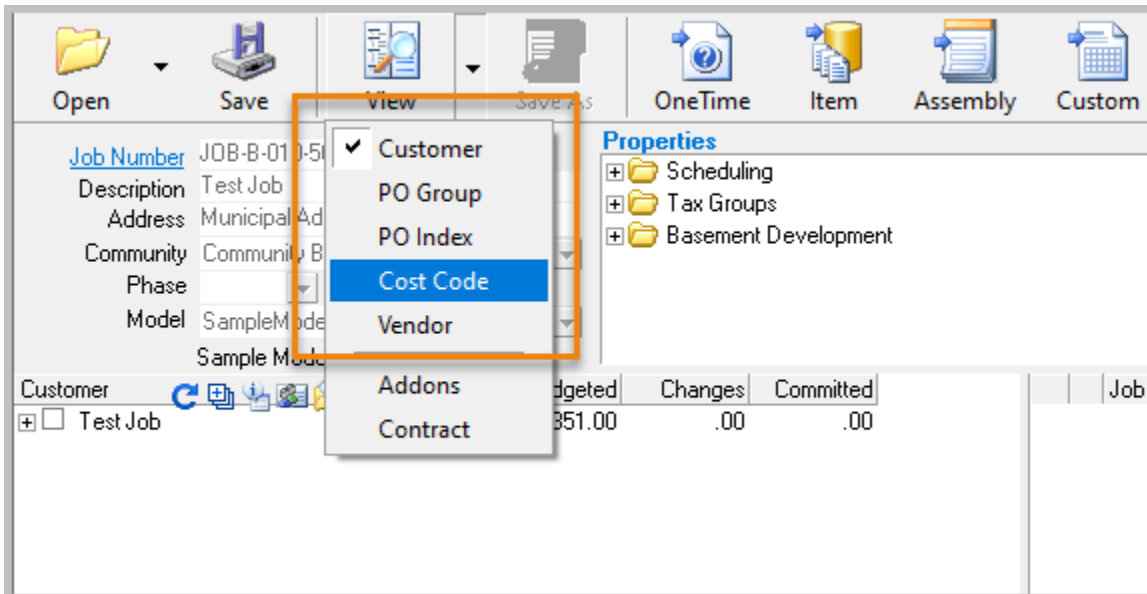

The Job will then be displayed in the **Issue PO's** window.

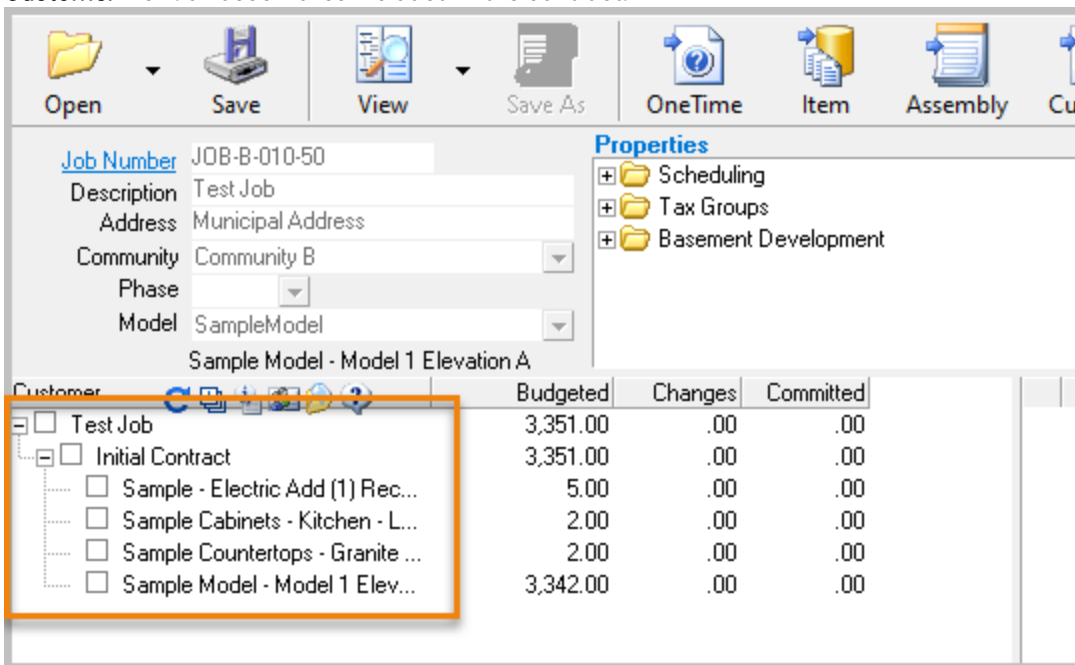

In the Issue PO's window, review and edit the line items of the Job. The following points may serve as guidance.

In the **Issue PO's** window, review and edit the line items of the Job if applicable. See **MODIFYING GRIDS AND LINE ITEMS** to adjust column headers and data.

Multiple views of the job record data are available.

Customer view: all assemblies included in the contract.

After generating the PO's, the items that were selected have now grayed out and show a grey box, indicating that they cannot be edited.

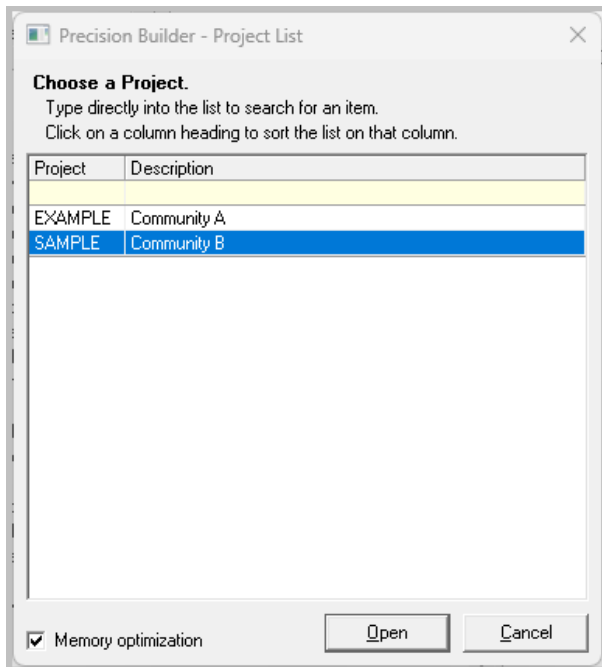

11.2.2 Creating and Generating Budgets/Purchase Orders by Project/Community

Creating and generating budgets by project is different from creating and generating a budget by Job, in that, by project the budgets can be created for multiple Jobs of a specific community (project) at the same time.

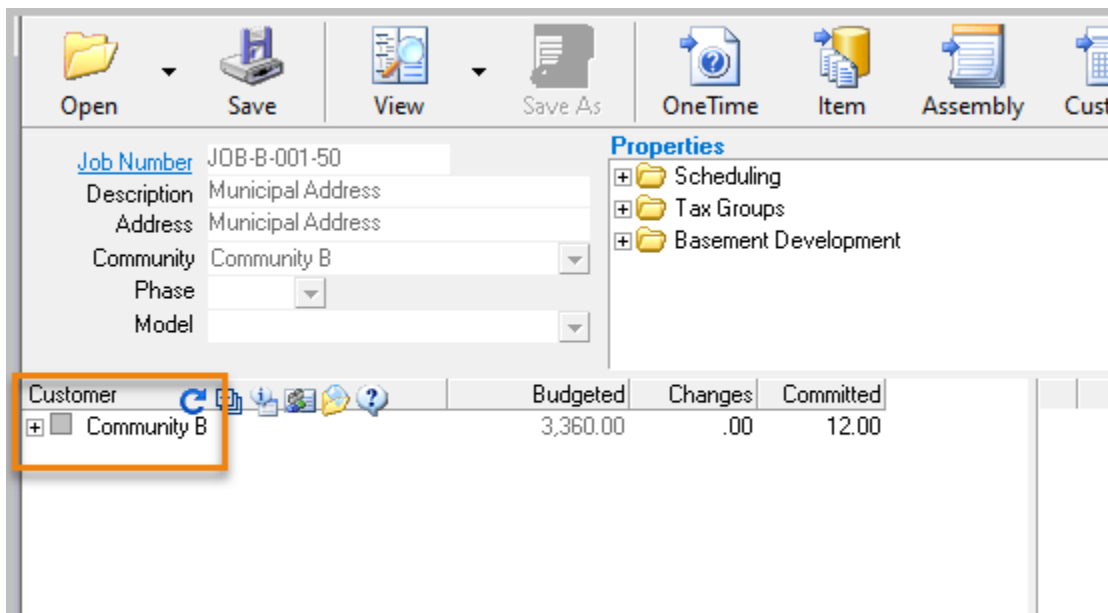

1. Access the Issue Budgets or Issue PO's menu on the left Task Panel of Precision Builder.
2. With the window open, click **Open**. Select Project from the drop down.

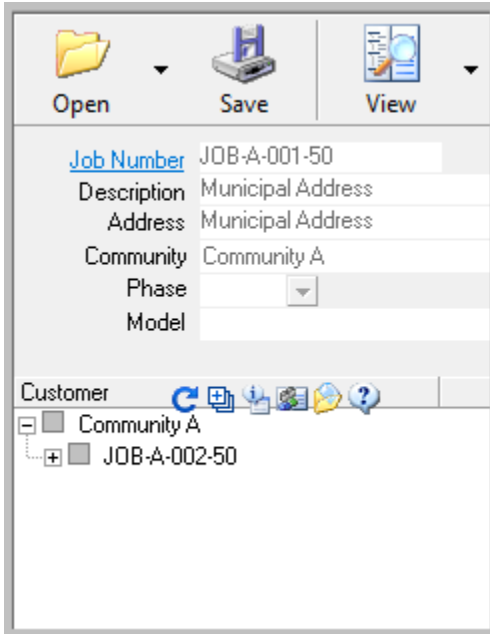

The Project List dialog opens.

In Project list dialog select the Project/Community to create budgets or Purchase Orders for and click Open. The Project will appear on the left pane of the Issue Budget/Issue PO's window.

In the Issue Budget/Issue PO's window expand the Community/Project. All the Jobs under the Project will be displayed. View the figure below for example.

The screenshot shows a software window with a menu bar containing 'Open', 'Save', and 'View'. Below the menu bar is a form with the following fields:

- Job Number:** JOB-A-001-50
- Description:** Municipal Address
- Address:** Municipal Address
- Community:** Community A
- Phase:** (dropdown menu)
- Model:** (empty field)

Below the form is a 'Customer' section with a tree view showing a hierarchy: Community A > JOB-A-002-50. There are also several icons (refresh, add, delete, etc.) next to the Customer section.

To Select and Generate Budgets and Purchase Orders, see section “**Creating and Generating Budgets by Job**” and “**Creating and Generating Purchase Orders by Job.**”

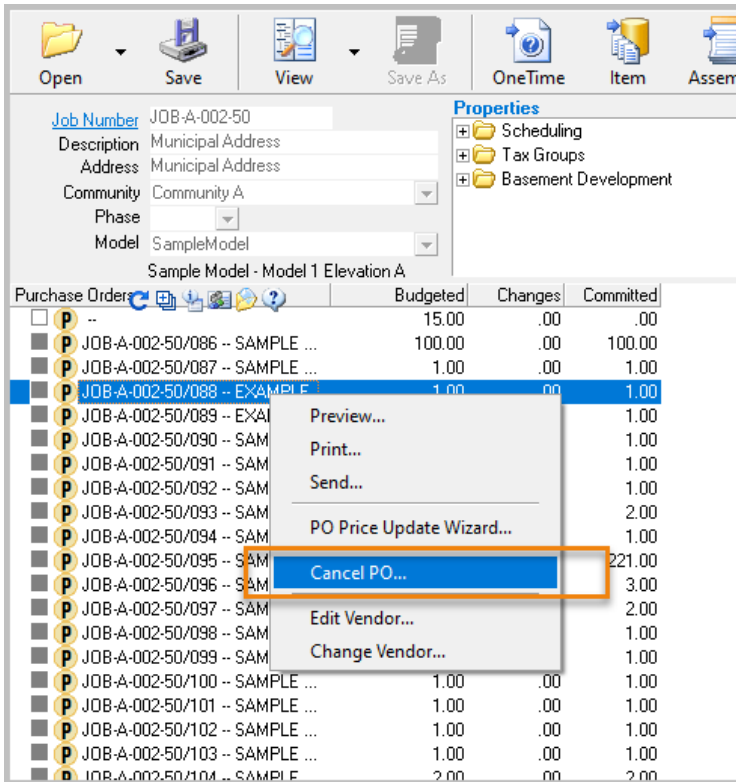

11.2.3 Cancelling a Purchase Order

Precision Builder allows the following processes to be completed for Purchase Orders:

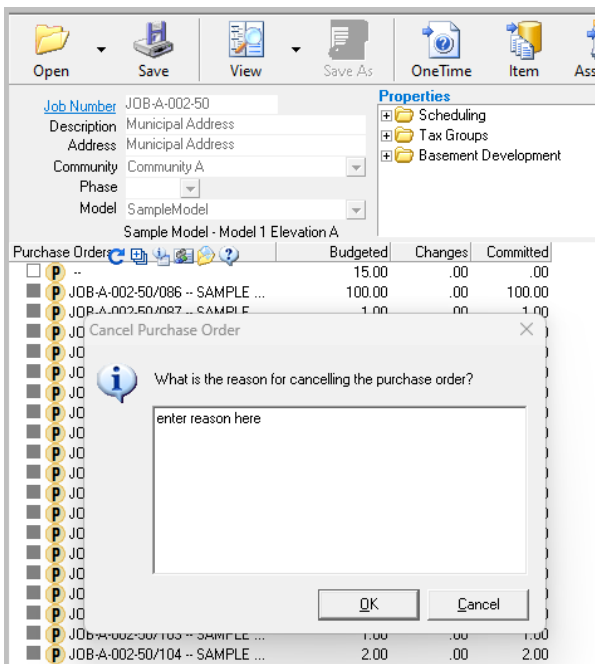

1. CANCEL and reissue of a new Purchase Order
2. Variance Purchase Orders in addition to the original Purchase Order
3. PO Change Order: Edit existing dollar values without cancelling the PO

 Precision DOES NOT allow for the Edit of a vendor on an existing generated Purchase Order. *Due to BuildPro Integration a vendor change requires a cancellation and reissue of a new Purchase Order.*

To cancel a generated Purchase order, right click on the chosen Purchase Order and **Cancel PO** from the menu that appears.

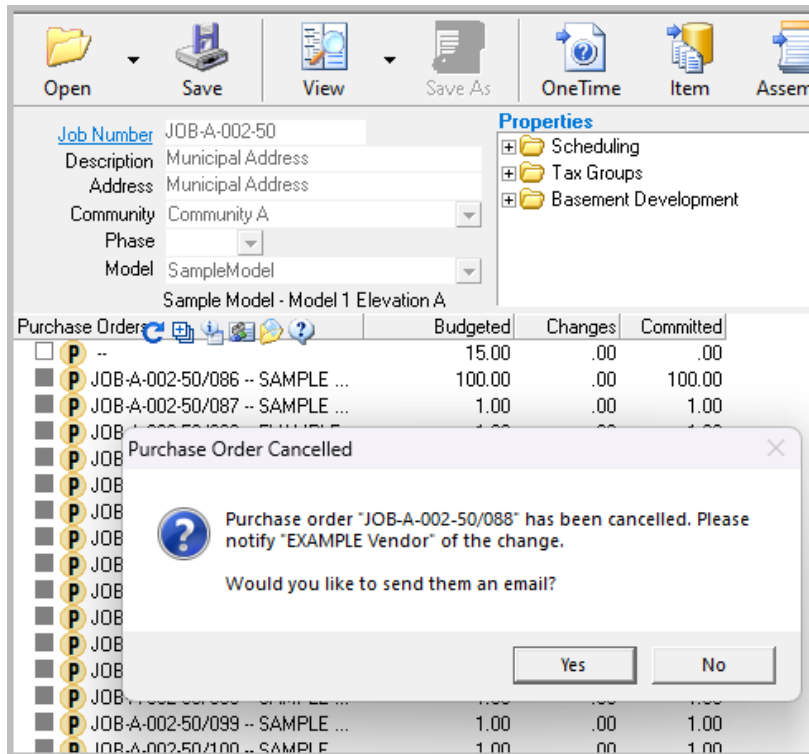

After choosing Cancel PO, an additional window will appear to add a reason for cancelling this po:

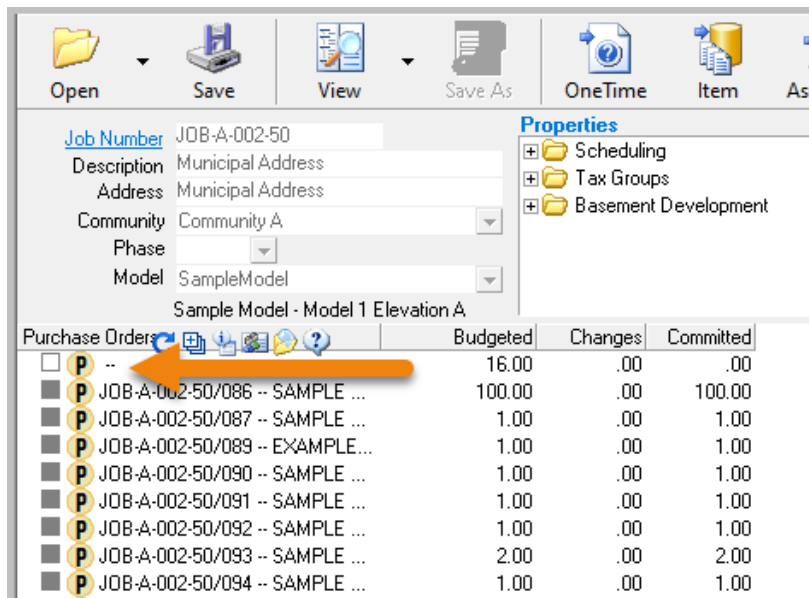

Enter reason and click OK. A notification will appear to notify the vendor. This will send an email to vendors if there is NOT an integration with BuildPro. When BuildPro is integrated, cancelled po's will be sent to the BuildPro schedule and notify the vendor automatically.

Choose NO if integrated to BuildPro.

The PO that was cancelled will be displayed with NO PO number and is available to edit:

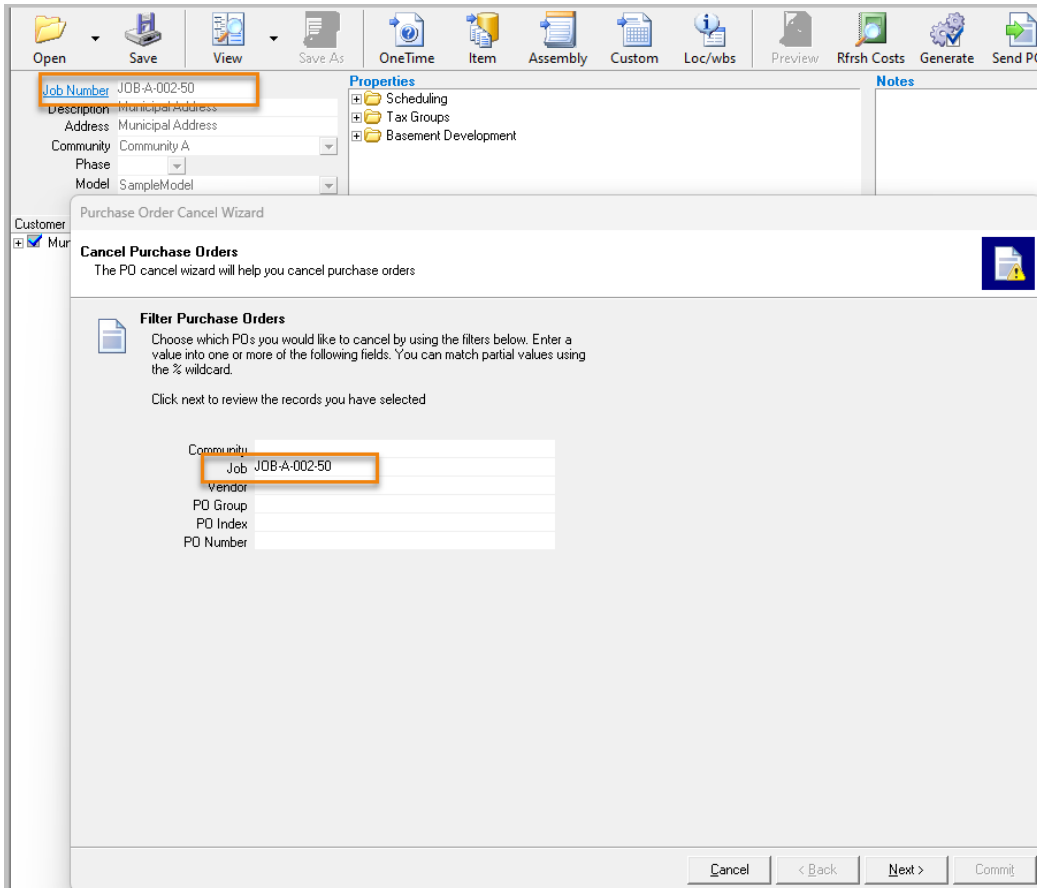

11.2.4 Cancelling multiple Purchase Orders

Precision/Tools/Cancel Purchase Order Wizard

This menu will launch the Purchase Order Cancel Wizard. The first screen will be the Filter. As there are no drop downs in each field, partially matched values can be used with the % wildcard.

Enter the filter information and choose NEXT.

11.2.6 Creating a Variance Purchase Order

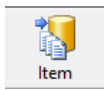

To Create a Variance Purchase Order using a Variance Category the following **Prerequisites** are required:

1. Variance Categories are created and synched from the accounting platform.
2. Set up instructions above are completed.
3. Budgets are Finalized in Issue Budgets Screen

 **Finalizing the Budget is a critical step to ensure the variance category can be defined when creating the Variance Purchase Order.**

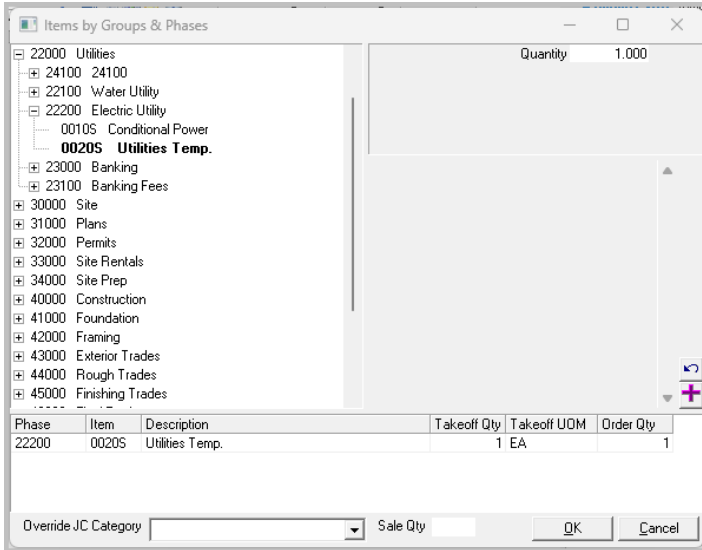

Variance PO's can be created by adding additional items to the job or editing a committed amount over the budget. The following is adding an additional item to the Job:

From the **Issue Purchase Orders** screen, select the applicable job.

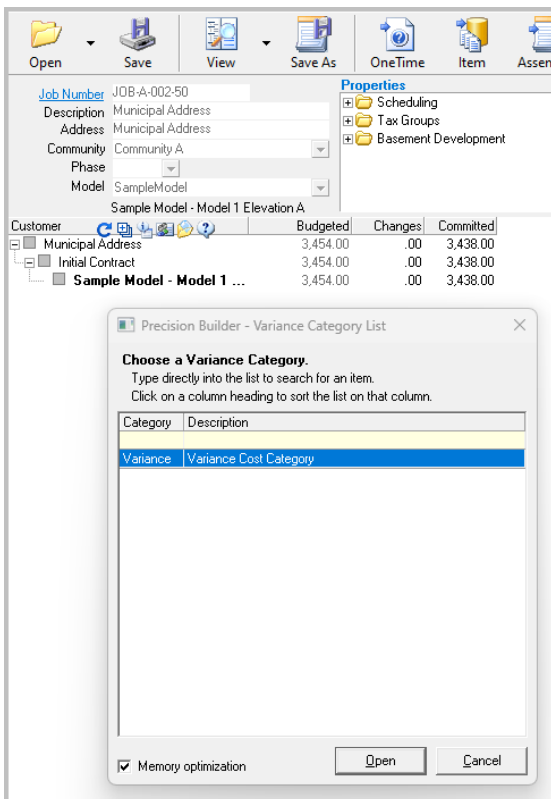

Choose the **Item** item icon. (A list of included assemblies for the chosen job will appear if applicable)

Choose the item for the variance, add a quantity, and click OK. For this example, Utilities Temp has been chosen.

Once the item has been added, it will appear in the right pane and a Variance Category List will appear. Choose the applicable Variance Category and click Open.

The new item will appear in the right pane allowing the variance po to be generated. The Variance code and description will populate in the columns as shown below (These columns may need to be inserted for the user's view)

Window11	Framing	Labor	Sample Mode	42500	00111 Window - Labor	SAMPLE Ve	1	EA	1	1.00	.00	.00
Window10	Framing	Subcontract	Sample Mode	42500	0010* Window - Labor and Material	SAMPLE Ve	1	EA	1	1.00	.00	.00
Window12	Framing	Material	Sample Mode	42500	00121 Window - Material	SAMPLE Ve	1	EA	1	1.00	.00	.00
NoPO20	Utilities	Subcontract	Sample Mode	22200	0020* Utilities Temp.	SAMPLE Ve	1	EA	1	1.00	.00	.00

Save.

To generate the VPO, select the item using the checkbox in the Job Description column.

This Warning appears if the value has changed in the Purchase Orders and has surpassed the budget amount. Click OK to accept the overage.

The new Variance Purchase order is defined with a V:

11.3 PO Change Orders

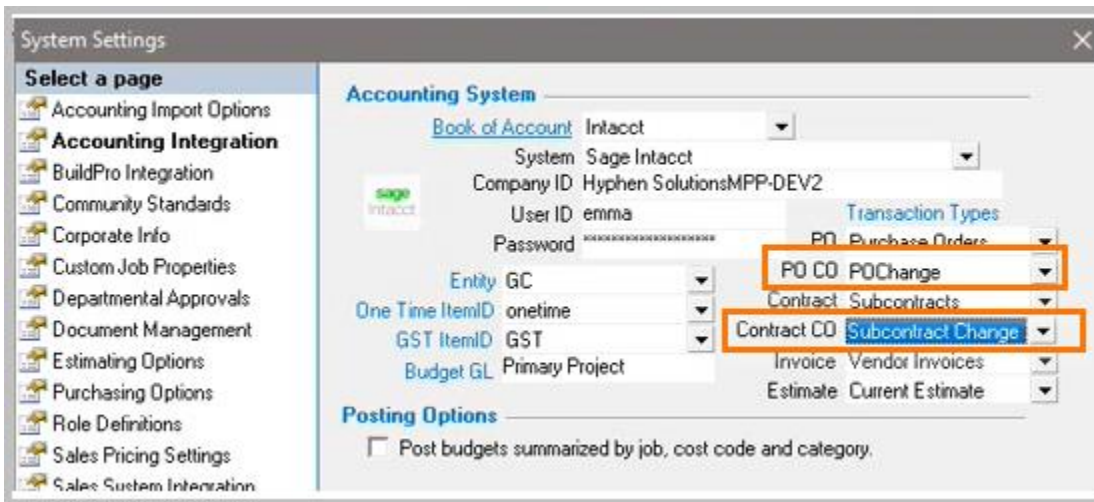

- The ability to edit rates on an existing purchase order.
- This feature is currently only available to Sage Intacct and Sage 300 clients. To have this menu exposed, contact a consultant or Support @ihyphen.com.
- Can be used with or without BuildPro integration.

11.3.1 Setup – Precision/Sage Intacct/Sage 300

Tools/System Settings/Accounting Integration

Select the following for Transaction Type:

- PO CO=POChange
- Contract CO=Subcontract Change

The screenshot shows the 'System Settings' window with the 'Accounting Integration' tab selected. The 'Accounting System' section is configured for Sage Intacct. The 'Transaction Types' section shows the following settings:

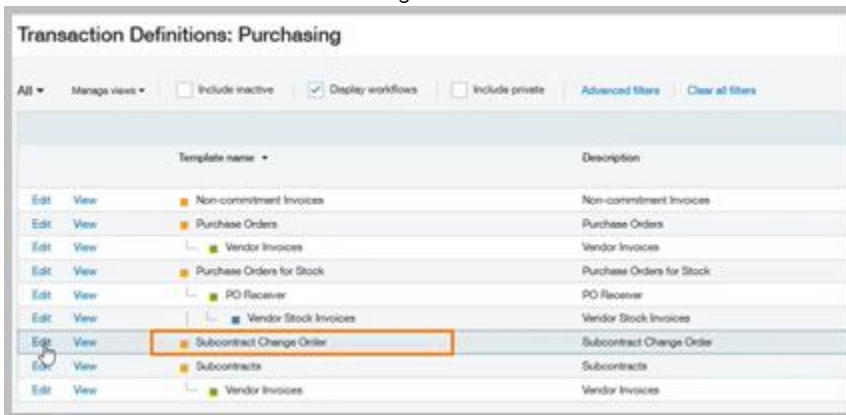

Transaction Type	Selected Value
PO	Purchase Orders
PO CO	POChange
Contract	Subcontracts
Contract CO	Subcontract Change
Invoice	Vendor Invoices
Estimate	Current Estimate

The 'Posting Options' section has the checkbox 'Post budgets summarized by job, cost code and category' unchecked.

Sage Intacct/Top Level/Purchasing/Setup/Transaction Definitions

To ensure that purchase orders with change orders associated integrate to Sage Intacct, the following settings are required:

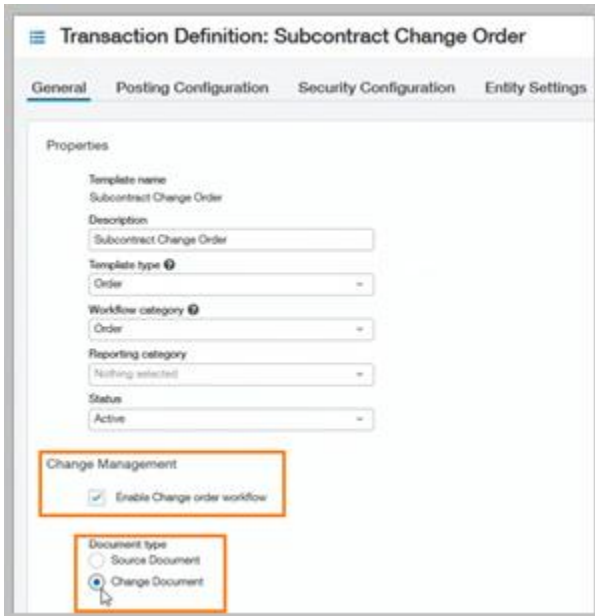

- Edit the Subcontract Change Order

The screenshot shows the 'Transaction Definitions: Purchasing' table. The table has columns for 'Template name' and 'Description'. The 'Subcontract Change Order' template is highlighted with an orange box.

Template name	Description
Non-commitment Invoices	Non-commitment Invoices
Purchase Orders	Purchase Orders
Vendor Invoices	Vendor Invoices
Purchase Orders for Stock	Purchase Orders for Stock
PO Receiver	PO Receiver
Vendor Stock Invoices	Vendor Stock Invoices
Subcontract Change Order	Subcontract Change Order
Subcontracts	Subcontracts
Vendor Invoices	Vendor Invoices

- General tab/Change Management box: check to enable change order workflow.
- Ensure that the Document Type is set to Change Document.

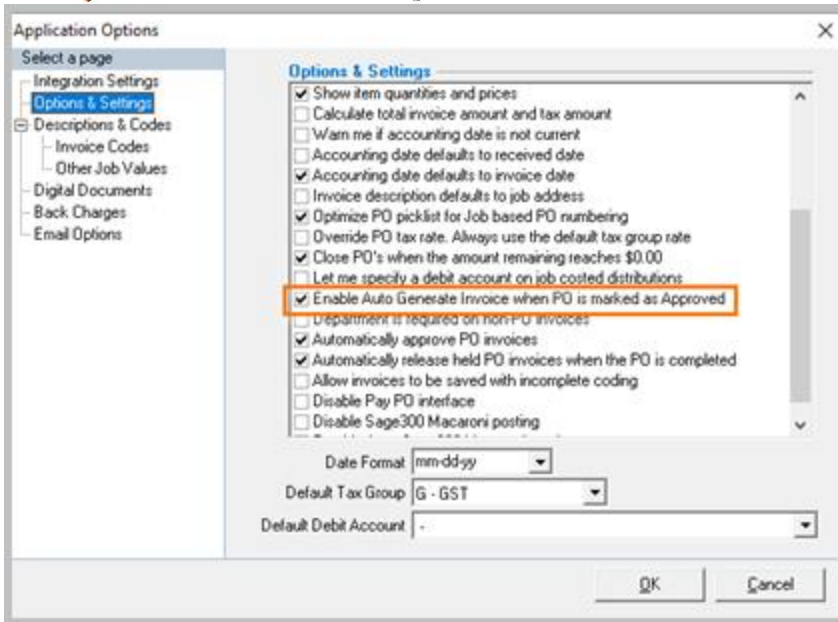

When the change orders come into Sage Intacct, they will show up as a PO change order, but they will also update the PO.

Payables Desk/Tools/Application Options/Options & Settings

- Enable Auto Generate Invoice when PO is marked as Approved.

If the client has turned this feature off (not checked), note that users will be able to update pricing on purchase orders **after** the purchase order is completed. These PO updates can continue until the invoice is created manually in Payables Desk and posted to the accounting system. Therefore It is recommended that this feature be enabled.

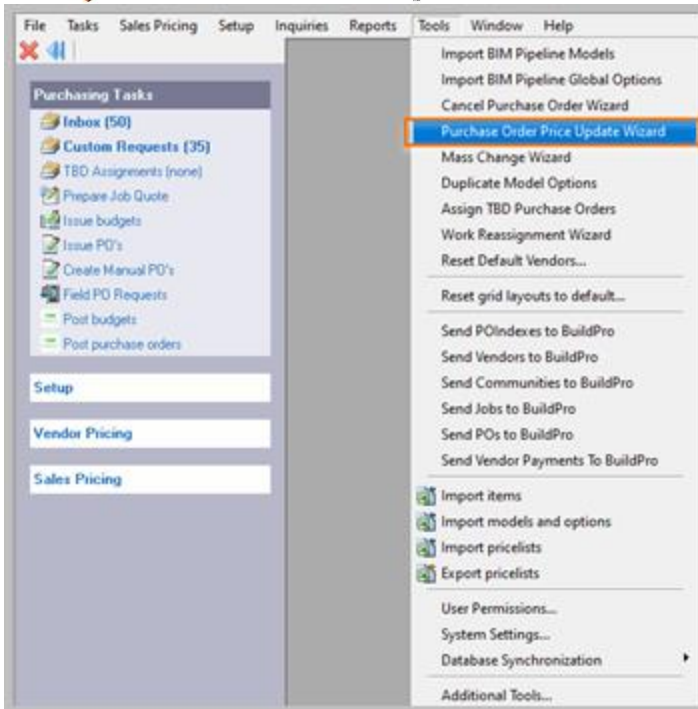

Sage 300

No Sage 300 set up is required at this time to create change orders on purchase orders in Precision Builder and be viewable in Sage 300.

11.3.2 Creating a PO Change Order

Tools/Purchase Order Price Update Wizard

The Wizard will Filter Purchase Orders based on the below fields:

- Subdivision
- Job
- Vendor
- PO Group
- PO Index
- PO Number

These are free form text fields and the % can be used as a wildcard for partial match searches.

Purchase Order Price Update Wizard

Update Purchase Orders Prices
The PO Price Update wizard will help you change the vendor costs on purchase orders

Filter Purchase Orders

Choose which PO's you would like to update by using the filters below. Enter a value into one or more of the following fields. You can match partial values using the % wildcard.

Click next to review the records you have selected

Community: steele%
Job: STH%
Vendor: nel001
PO Group:
PO Index: 06floorjst
PO Number:

Cancel < Back **Next >** Commit

Click Next and the completed data fields will return results in the Update Purchase Orders Prices screen.

- **Only un-invoiced** purchase orders will be listed. (Completing a PO in BuildPro generates an invoice in Payables Desk and therefore precludes the PO.)
- Review the list of POs to ensure it is accurate.
- Select Next.

Purchase Order Price Update Wizard

Update Purchase Orders Prices
The PO Price Update wizard will help you change the vendor costs on purchase orders

Verify which POs will be updated
Review the list below to verify the purchase orders you have selected

Community	Community Desc	Job	Job Desc	Vendor	Vendor Desc	PO Group	PO Index	PO Index Description	PO Number	PO Date
STH	Steele Heights	STH 22 001	Sold Spec South Inc S/H	NEL001	Nelson/Lumber	Stage 2	06Floorjst	Floor Joists	H 22-001/007	06/16/2022

Cancel < Back **Next >** Commit

Verify the new rate prices.

- OrigRate is the original committed cost.
- NewRate defaults to the vendors current price list. (Best practice is to update the vendor price list and then create the change order on the purchase order.)
- The NewRate will display in red if it is different than the OrigRate.
- The NewRate can be manually overridden on this screen. Doing so does not update the vendors price list. It simply sets the price on the selected purchase orders.

Purchase Order Price Update Wizard

Update Purchase Orders Prices
The PO Price Update wizard will help you change the vendor costs on purchase orders

Verify the new item rates
Review the list below to verifying the new purchase prices. Click the commit button when you are sure you would like to commit to these changes

Variance Category: Builder

Vendor	Name	Phase	Item	Description	OrigRate	NewRate
NEL001	Nelson Lumber	06-0640	010M	Floor Joists - Main Floor	2555	2655
NEL001	Nelson Lumber	06-0640	011M	Floor Joists - Second Floor	1985	1995
NEL001	Nelson Lumber	06-0640	12M	Delivery Charge	50	50

Buttons: Cancel, < Back, Next >, Commit

- In addition, the variance category can also be selected on this screen. The variance category will reflect the reason the change in price is taking place. Select the drop down to pick the correct category.
- When all changes have been completed, select Commit.

Purchase Order Price Update Wizard

Update Purchase Orders Prices
The PO Price Update wizard will help you change the vendor costs on purchase orders

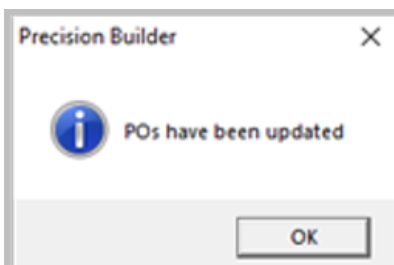

Verify the new item rates
Review the list below to verifying the new purchase prices. Click the commit button when you are sure you would like to commit to these changes

Variance Category: Builder

Vendor	Name	Phase	Item	Description	OrigRate	NewRate
NEL001	Nelson Lumber	06-0640	010M	Floor Joists - Main Floor	2555	2655
NEL001	Nelson Lumber	06-0640	011M	Floor Joists - Second Floor	1985	1995
NEL001	Nelson Lumber	06-0640	12M	Delivery Charge	50	50

Buttons: Cancel, < Back, Next >, Commit

- A message will appear indicating that the PO's have been updated. Select OK to clear the message.

Once the changes are committed, a PO Change Order will be created adding correcting entries in the Issue POs screen in Precision Builder.

If accessing the wizard from the Issue PO's menu, once the PO Price Wizard Update is selected, the Update Purchase Orders Prices screen will open.

11.4 Refreshing Costs for Budgets or Purchase Orders

It's best practice to refresh costs of items on Budgets or Purchase Orders (PO's) before generating them. By doing this, the user will always generate Budgets and PO's that have the most up to date price list.

Select the items to refresh costs for. This can be done in one of two ways:

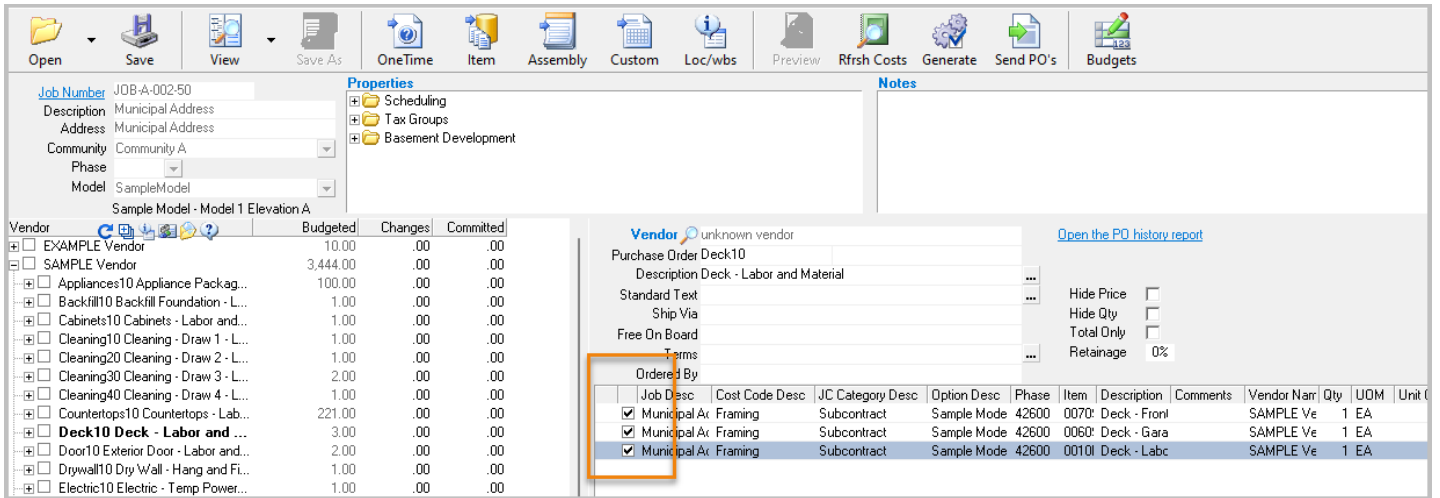

Checking the boxes in the left pane:

The screenshot shows the Hyphen Homefront software interface. The top toolbar includes buttons for Open, Save, View, Save As, OneTime, Item, and Ass. The main window is divided into two panes. The left pane, titled 'Properties', contains fields for Job Number (JOB-A-002-50), Description (Municipal Address), Address (Municipal Address), Community (Community A), Phase, and Model (SampleModel). Below these fields is a dropdown menu showing 'Sample Model - Model 1 Elevation A'. The right pane, titled 'Properties', contains a list of folders: Scheduling, Tax Groups, and Basement Development. Below the panes is a table with columns: Vendor, Budgeted, Changes, and Committed. The table lists various items with checkboxes in the Vendor column.

Vendor	Budgeted	Changes	Committed
☐ EXAMPLE Vendor	10.00	.00	.00
☒ SAMPLE Vendor	3,444.00	.00	.00
☒ Appliances10 Appliance Packag...	100.00	.00	.00
☐ Backfill10 Backfill Foundation - L...	1.00	.00	.00
☐ Cabinets10 Cabinets - Labor and...	1.00	.00	.00
☒ Cleaning10 Cleaning - Draw 1 - L...	1.00	.00	.00
☐ Cleaning20 Cleaning - Draw 2 - L...	1.00	.00	.00
☐ Cleaning30 Cleaning - Draw 3 - L...	2.00	.00	.00
☐ Cleaning40 Cleaning - Draw 4 - L...	1.00	.00	.00
☐ Countertops10 Countertops - Lab...	221.00	.00	.00
☒ Deck10 Deck - Labor and Material	3.00	.00	.00
☐ Door10 Exterior Door - Labor and...	2.00	.00	.00
☐ Drywall10 Dry Wall - Hang and Fi...	1.00	.00	.00
☐ Electric10 Electric - Temp Power...	1.00	.00	.00

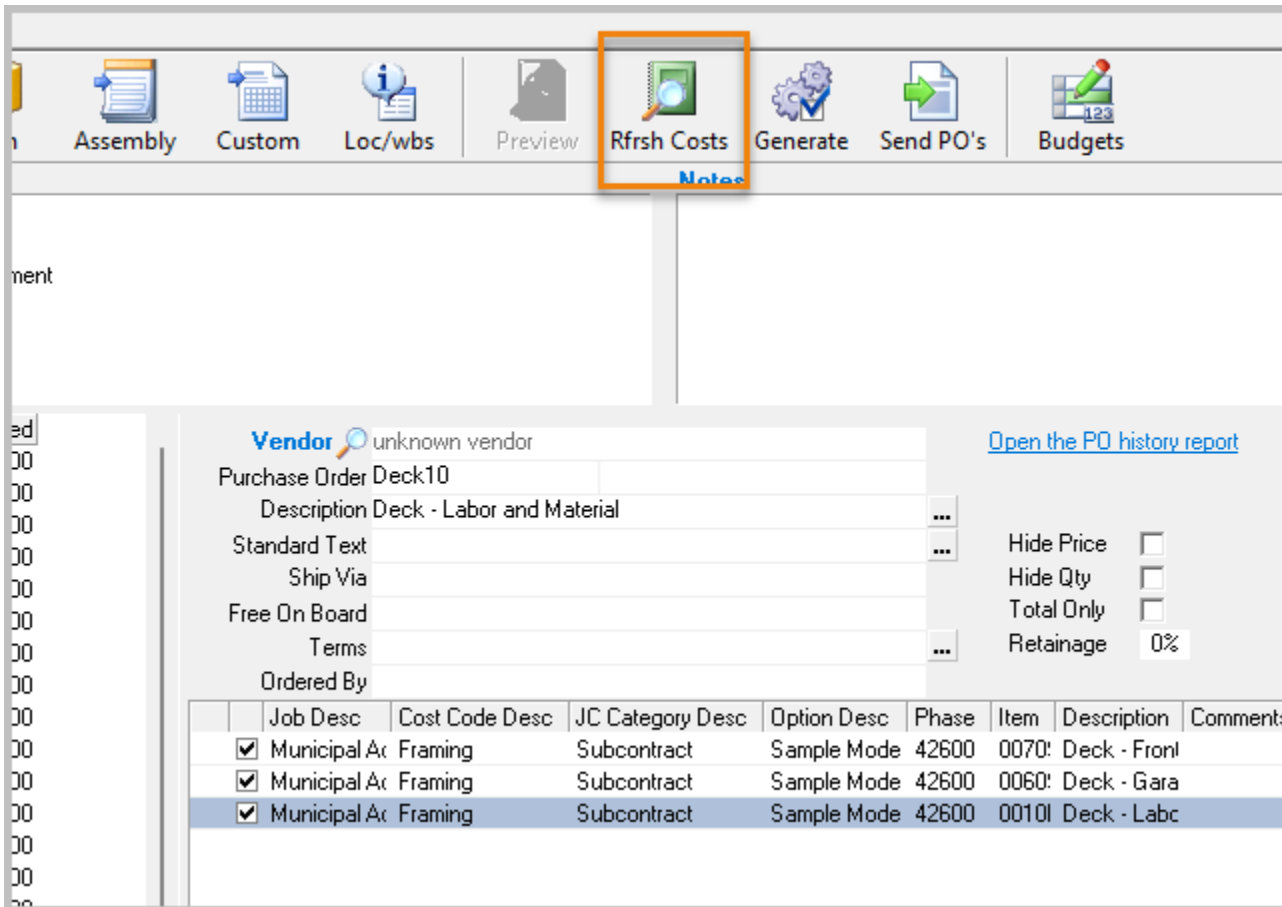

Selecting individual items from the right pane:

The screenshot shows the Hyphen Homefront software interface. The top toolbar contains icons for Open, Save, View, Save As, OneTime, Item, Assembly, Custom, Loc/wbs, Preview, Rfrsh Costs, Generate, Send PO's, and Budgets. The 'Rfrsh Costs' icon is highlighted with an orange box. Below the toolbar, the 'Properties' pane shows job details for 'Job Number J08-A-002-50'. The 'Notes' pane is empty. The 'Vendor' pane shows a list of vendors with columns for Budgeted, Changes, and Committed. The 'Ordered By' table lists items with columns for Job Desc, Cost Code Desc, JC Category Desc, Option Desc, Phase, Item, Description, Comments, Vendor Name, Qty, UOM, and Unit Cost. The table contains three rows of data, all of which are checked.

Job Desc	Cost Code Desc	JC Category Desc	Option Desc	Phase	Item	Description	Comments	Vendor Name	Qty	UOM	Unit Cost
☒ Municipal A: Framing	Subcontract	Sample Mode	42600	0070'	Deck - Front			SAMPLE Ve	1	EA	
☒ Municipal A: Framing	Subcontract	Sample Mode	42600	0060'	Deck - Gara			SAMPLE Ve	1	EA	
☒ Municipal A: Framing	Subcontract	Sample Mode	42600	0010'	Deck - Labc			SAMPLE Ve	1	EA	

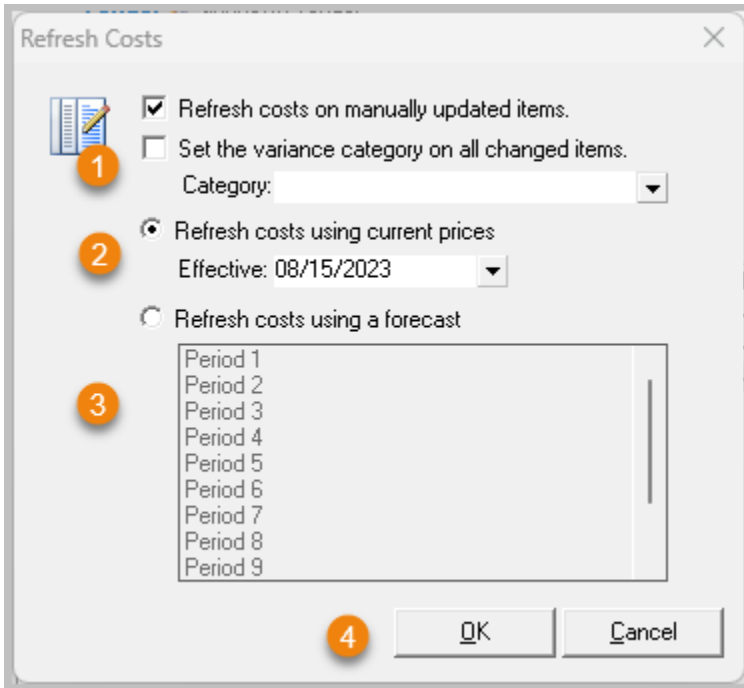

Once items to be refreshed are selected, choose the Refresh Costs Icon:

The screenshot shows the Hyphen Homefront software interface. The top toolbar contains icons for Assembly, Custom, Loc/wbs, Preview, Rfrsh Costs, Generate, Send PO's, and Budgets. The 'Rfrsh Costs' icon is highlighted with an orange box. Below the toolbar, the 'Notes' pane is empty. The 'Vendor' pane shows a list of vendors with columns for Budgeted, Changes, and Committed. The 'Ordered By' table lists items with columns for Job Desc, Cost Code Desc, JC Category Desc, Option Desc, Phase, Item, Description, Comments, Vendor Name, Qty, UOM, and Unit Cost. The table contains three rows of data, all of which are checked.

Job Desc	Cost Code Desc	JC Category Desc	Option Desc	Phase	Item	Description	Comments	Vendor Name	Qty	UOM	Unit Cost
☒ Municipal A: Framing	Subcontract	Sample Mode	42600	0070'	Deck - Front			SAMPLE Ve	1	EA	
☒ Municipal A: Framing	Subcontract	Sample Mode	42600	0060'	Deck - Gara			SAMPLE Ve	1	EA	
☒ Municipal A: Framing	Subcontract	Sample Mode	42600	0010'	Deck - Labc			SAMPLE Ve	1	EA	

In the Refresh Costs dialog, there are prompts for the following:

1. **Set the variance category on all changed items:** Will assign the same Variance Category to all changes selected.
2. **Effective:** date for refreshed pricelist
3. **Refresh costs using a forecast:** Select a forecast pricelist.
4. Click **OK**, after specifying the Effective Date of the new price list. All un-generated items that were selected will have their prices refreshed using the criteria specified.

11.5 When can Information for Budgets and Purchase Orders be modified.

There are times when the information on the Budget or Purchase Order can be changed. Depending on the timing this may limit the types of changes available to perform. The following table identifies the scenarios where limited editing may apply.

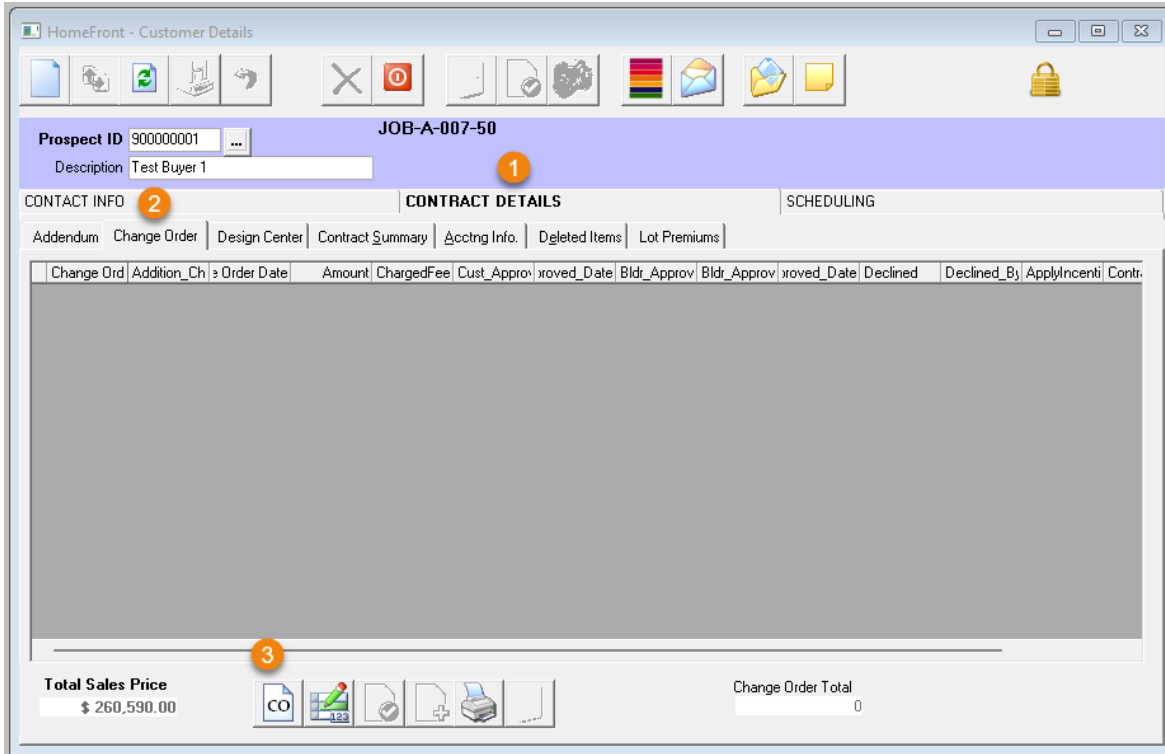

Type of Change Available for a line item	No Budgets or PO's Generated	Budgets ARE Generated PO's NOT Generated	Budgets NOT Generated PO's ARE Generated	Both Budgets and PO's Generated
Full Editing	☒			No editing
Change Vendor when preparing Budgets	☒		☒	No editing
Change Vendor when preparing Purchase Orders	☒	☒		No editing
Change Item Description	☒		☒	No editing
Change JC Cost Code	☒			No editing
Change JC Category	☒			No editing
Change Budget Qty, Rate or Amount	☒		☒	No editing
Change PO Qty, Rate or Amount	☒	☒		No editing

11.6 Change Orders

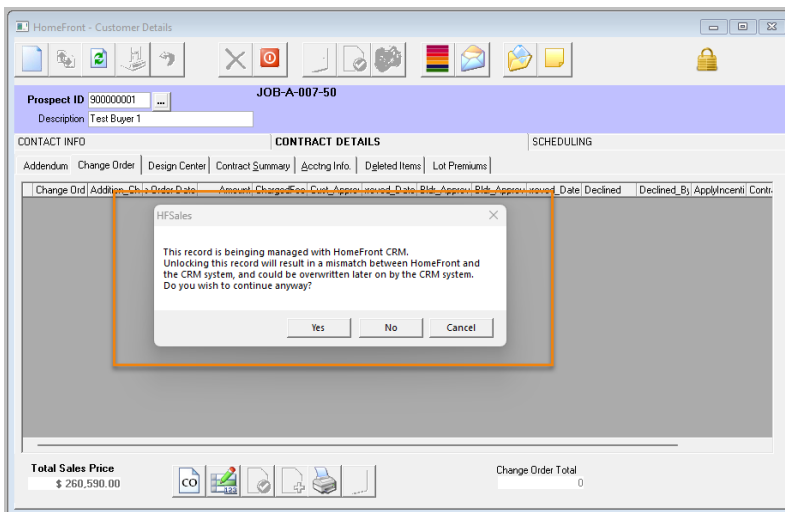

11.6.1 Creating/Generating Budgets on Approved Change Orders from Profit/HFS

Change Orders are initiated due to a buyer adding or changing option related items. All Change Orders are created in Profit Builder or HFS (see HFS user Guide). When Change Orders are approved within Profit Builder/HFS, each approved option will be sent to the Inbox of Precision Builder. The Inbox contains all unprocessed Sales Contracts and Change Orders. In this topic we are going to discuss how to create and generate budgets and Purchase Orders for Change Orders in Precision Builder. The Change Order creation begins in Profit Builder/HFS. The following describes steps taken in Profit Builder for the Change Orders to ultimately appear in the Inbox of Precision Builder. However, note that the explanations in these steps about Profit Builder are not exhaustive. For more understanding of Profit Builder, please read Profit Builder manuals.

Open a sales contract of the Customer in Profit Builder

1. Under the Contract Details tab
2. Select the Change Order tab.
3. Create a Change Order.
4. *If the following warning appears, CLOSE the record, and go to HFS to add the Change Order. This warning will not stop the user from adding Change Orders, furthermore, the Change Order will NOT appear in HFS and could be overwritten later by another user operating in HFS within the same Job.*

A Change Order is created and labeled Change Order Number: CO_1.

After the Change Order has been Builder Approved, the Change Order will be released to estimating (Precision Builder). The Change Order will appear in the Inbox under the Purchasing Task menu of the Task Panel in Precision Builder. The value shown next to Inbox is an “assembly” count. View the figure below.

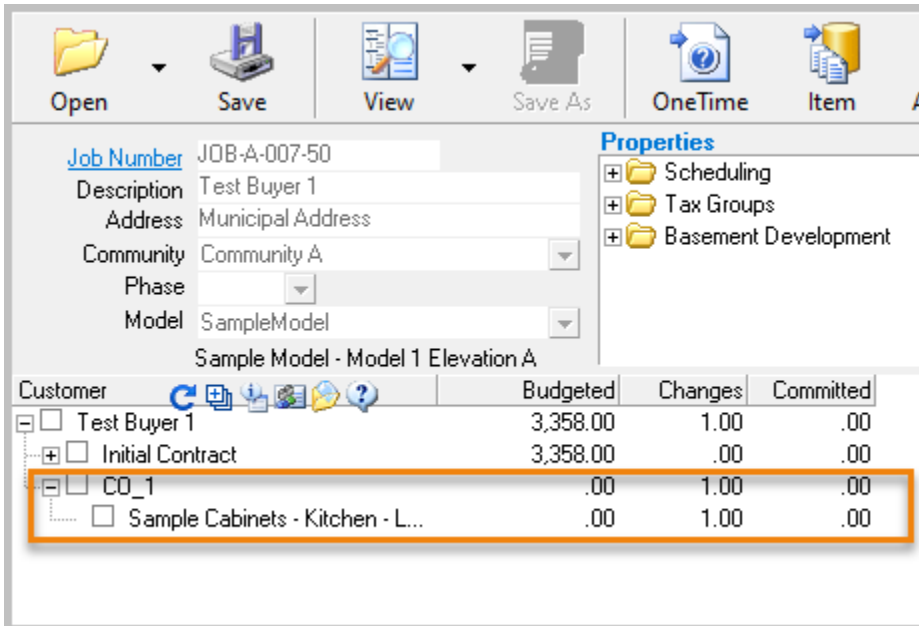

Click the Inbox to open the Prepare Estimates dialog.

1. Job Number and Customer name of the original sales contract
2. items of CO_1
3. Select the check boxes next to each item for budgets and PO's to be generated.
4. Click OK after selecting the items to begin the process.

After clicking OK in the Prepare Estimates dialog, items selected from the Prepare Estimates dialog will now appear on the left pane of the Issue Budget window. The below example requires the user to be in "Customer" view and expand CO_1. View the following figure.

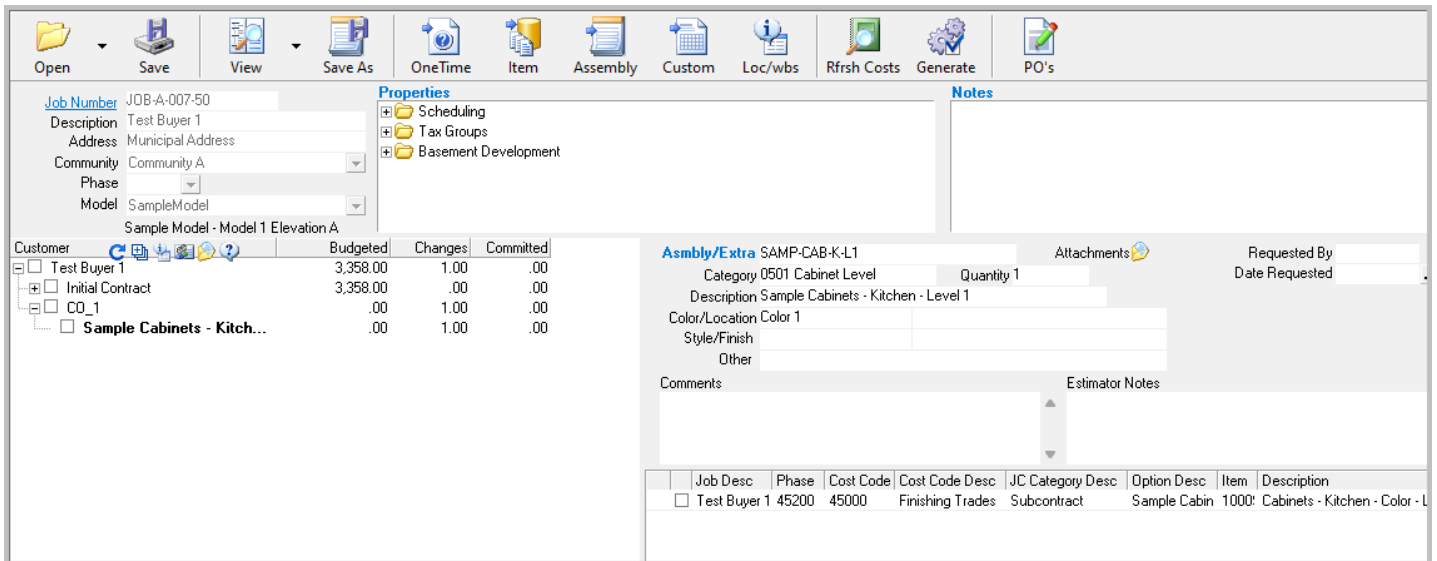

Job Number JOB-A-007-50
Description Test Buyer 1
Address Municipal Address
Community Community A
Phase
Model SampleModel
 Sample Model - Model 1 Elevation A

Properties
 + Scheduling
 + Tax Groups
 + Basement Development

Customer	Budgeted	Changes	Committed
☐ Test Buyer 1	3,358.00	1.00	.00
☐ Initial Contract	3,358.00	.00	.00
☐ CO_1	.00	1.00	.00
☐ Sample Cabinets - Kitchen - L...	.00	1.00	.00

On the left pane of the Issue Budget window, either double-click on an individual item of the Change Order to see its item details displayed on the right pane(grid) or double-click on the Change Order itself (in this case CO_1) to view all its item details. View figure for example:

CO_1	.00	1.00	1.00
Sample Cabinets - Kitchen - L...	.00	1.00	1.00

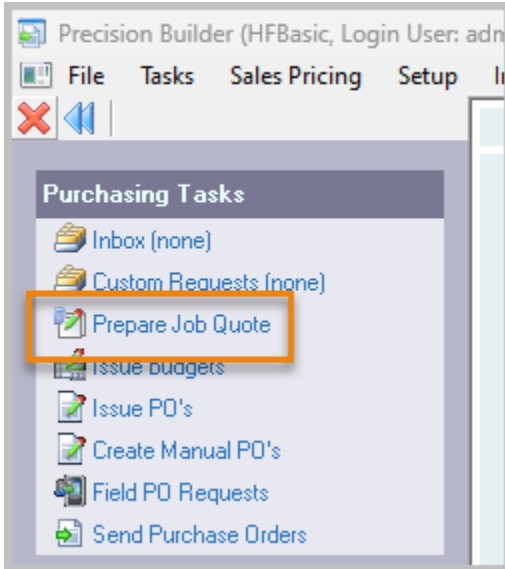

After clicking Open on the Job List dialog. The Job will be displayed in the Issue Budget window.
 Right-click on the main assembly in the left pane of the Issue Budget window.

12.0 CREATE A QUOTE (Custom Home Builders and Commercial Contracting)

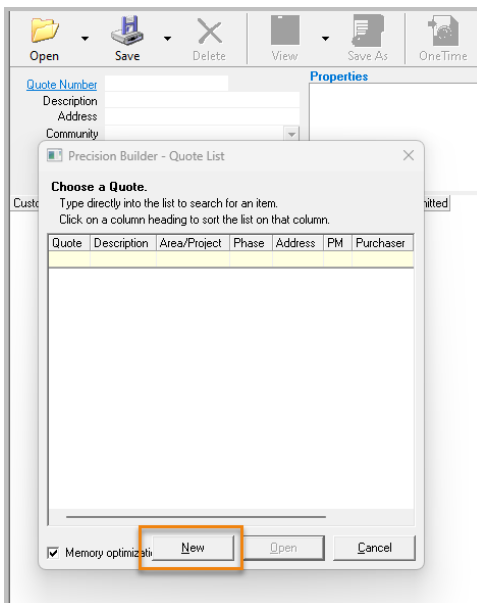

A **Quote** is an estimate created for a customer. The Quote may eventually be converted into a Job if the customer commits. *This Process does not create a sales record.*

12.1 Creating a Quote

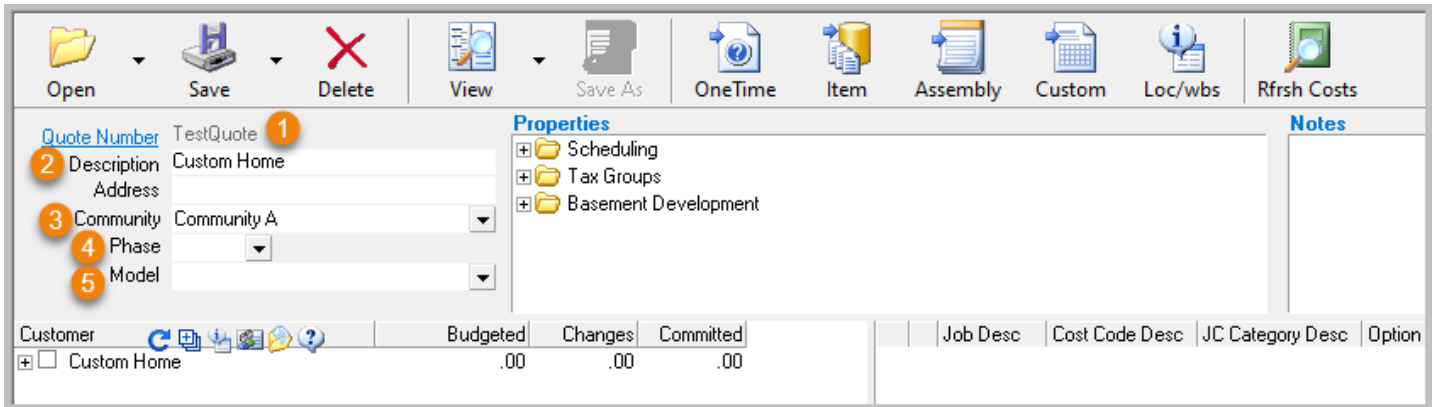

On the left **Task Panel** of **Precision Builder** open Purchasing Task menu followed by “**Prepare Job Quote**”

The **Prepare Quote** window and **Quote List** dialog will open simultaneously. Click **New** on the Quote List dialog.

The **Quote List** dialog will close leaving **Prepare Quote** window open, ready for a new quote to be created. In the Prepare Quote window, enter the necessary Quote information in the header area. View figure below for example

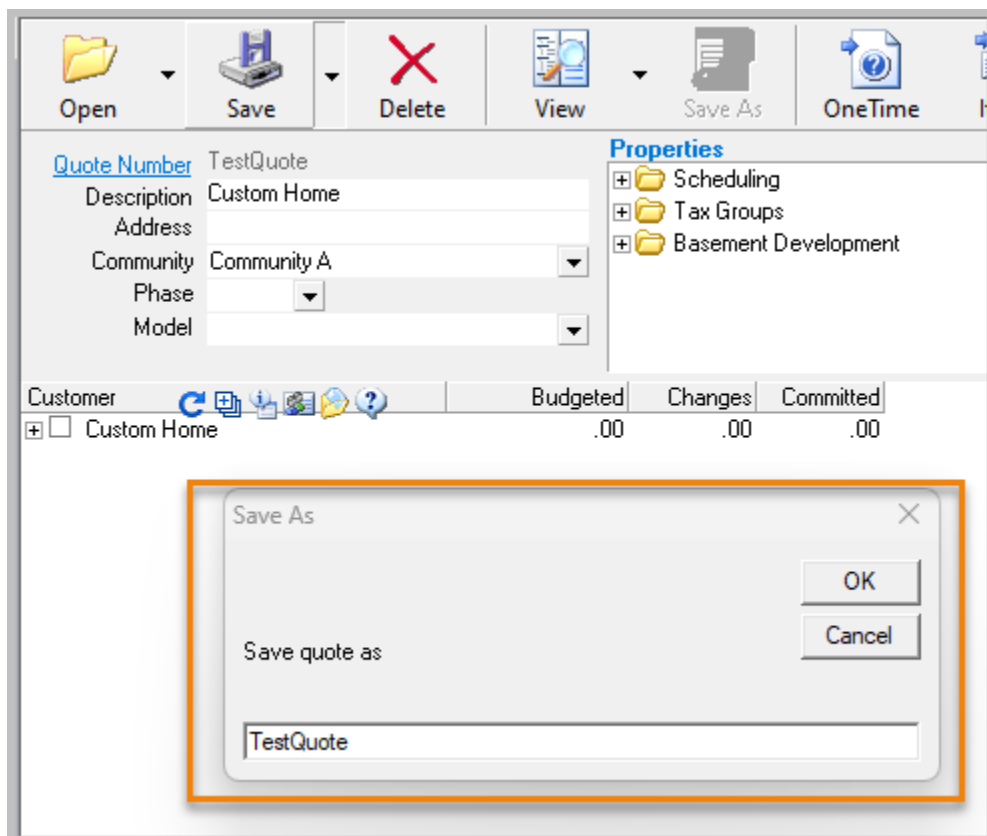

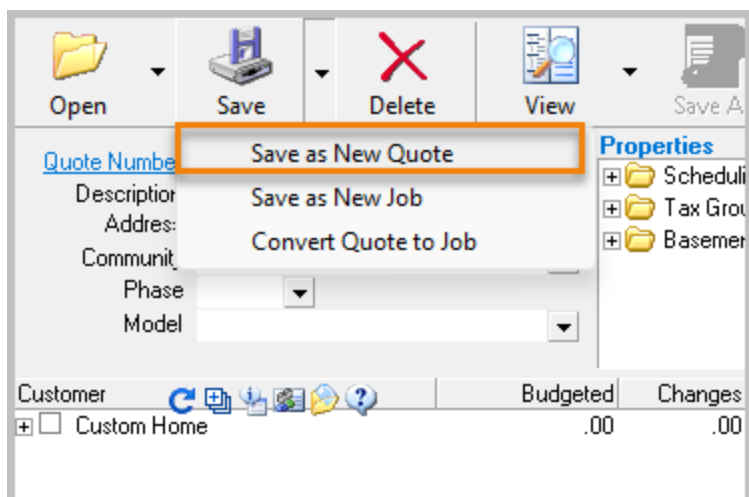

1. **Quote number:** is auto generated or can be manually entered. Quote numbers and Job numbers are generated in the same way therefore, Quote numbers may be converted to Job numbers. A quote is converted to a job when a customer commits to the quote.
 2. **Description:** extended description of the quote item
 3. **Community:** to assign the quote and choose community defined model and option assemblies
 4. **Phase:** Specify if the community has a phase
 5. **Model:** Specify the model if creating a quote for an already existing model
- After entering the necessary information in the header area, click **save**.

12.2 Adding items to the Quote from the Item Database

Refer to section 7.2.2 Adding Items to Assemblies

12.3 Save as a new Quote

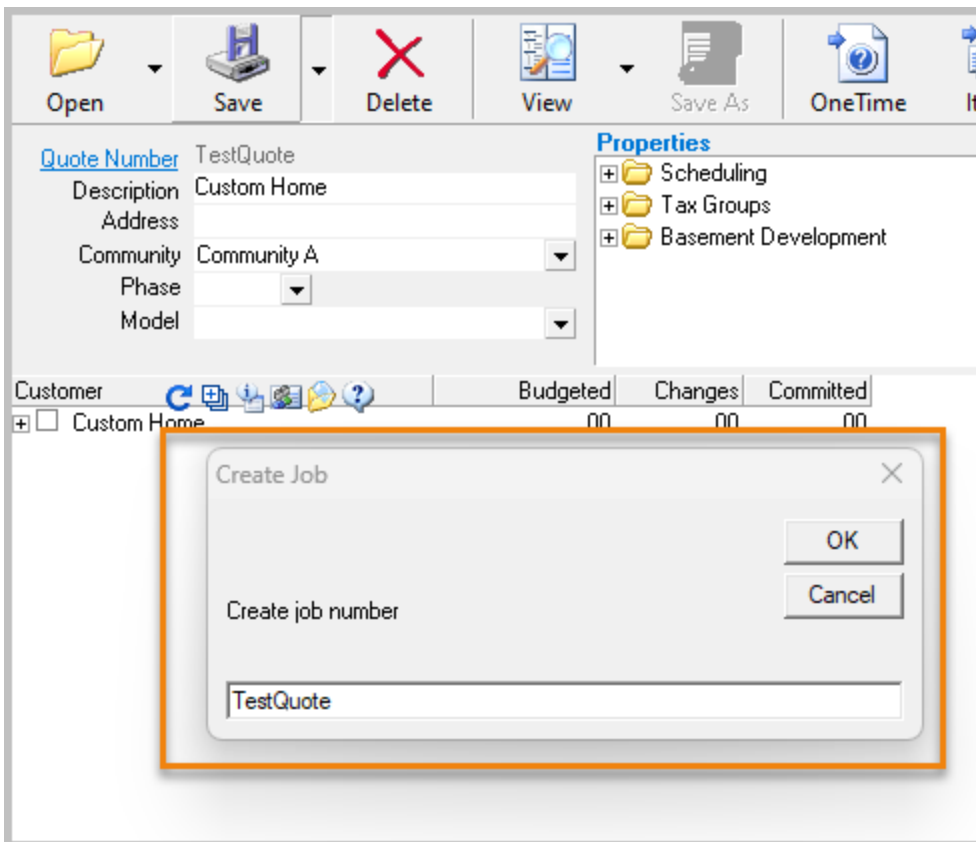

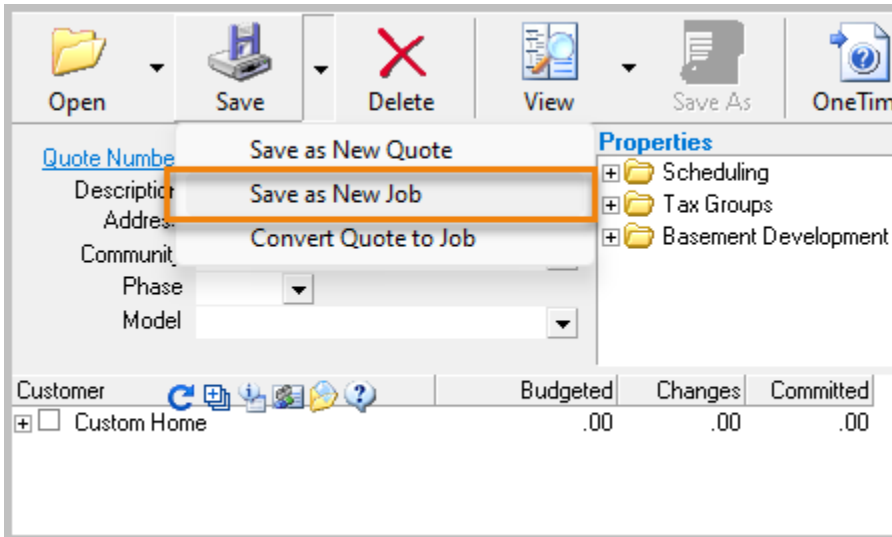

Click the drop-down to the right of the **Save** icon and then select **Save as New Quote**. This will save the Quote and the changes, but a dialog will prompt the entry of a new Quote Number.

The original Quote will be saved and the new Quote with a new Quote Number will also be created and saved.

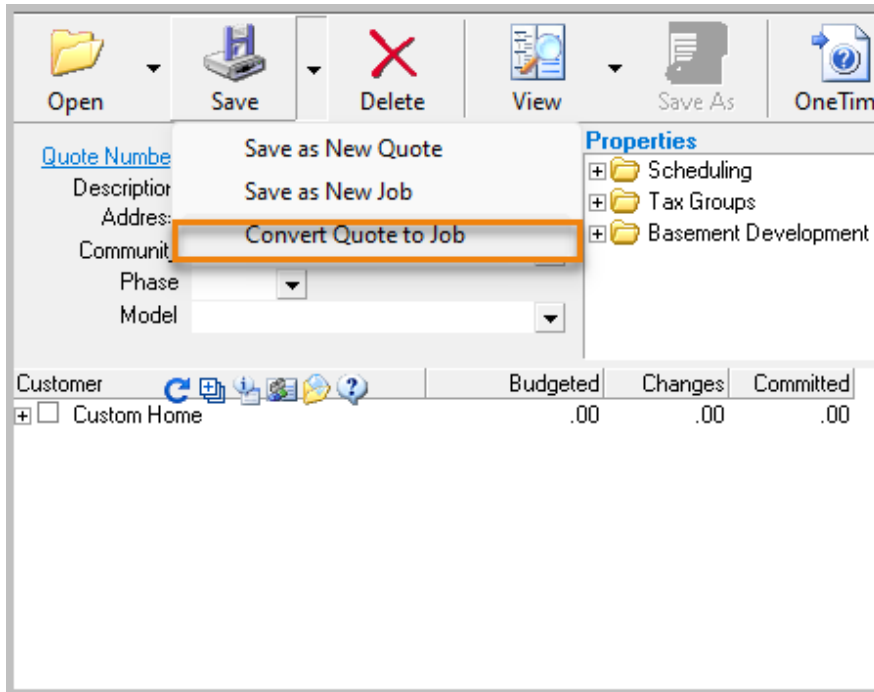

12.4 Save as a new Job

Click the drop-down to the right of the Save icon and then select Save as New Job. A dialog will prompt to create a Job Number. This will save the original Quote but over and above that a new Job will be created from the Quote. The Job will open from the Issue Budget Window

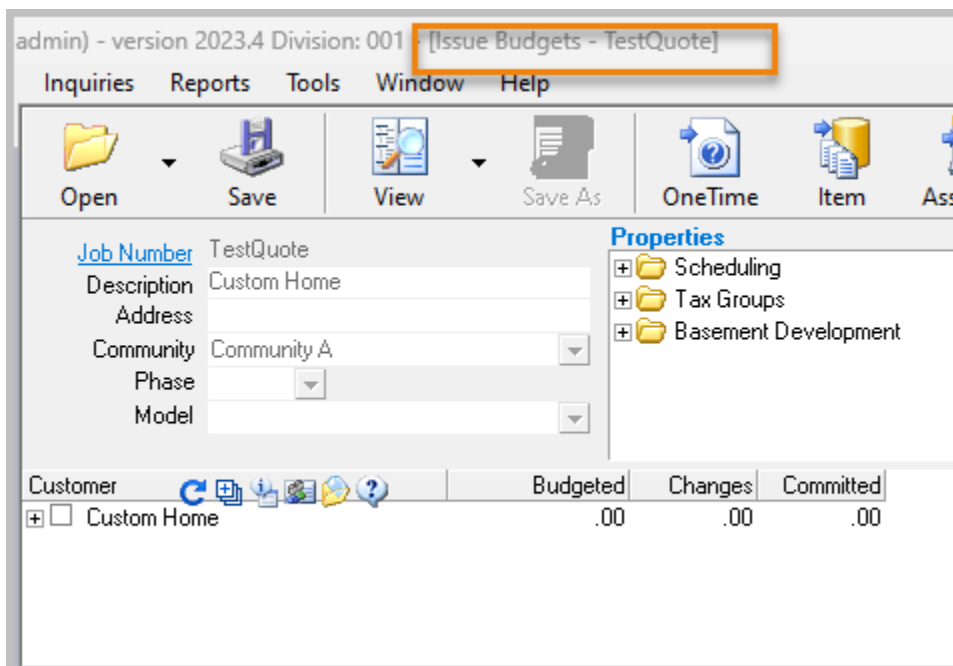

12.5 Convert Quote to a Job

Click the drop-down to the right of the Save icon and then select Convert Quote to Job.

The New Job will open the Issue Budget window where a budget can be prepared and generated. The New Job will take on the number of the Quote Number. The originating Quote will cease to exist.

13.0 HomeFront Support and Customer Care

Email	
Preferred Method of contact.	support@ihyphen.com
Please include the core application within the email subject line. Example: HomeFront or Buildpro. Modules such as Precision or Payables, and other integrated software with version numbers should be noted within the details describing your issue or request. When applicable, providing supporting documents such as full screenshots, reports used and noting the steps taken will assist in providing faster resolution.	
Telephone	
Customer Care Center Monday through Friday 7a.m. to 7 p.m.	1-877-508-2547 Select option 4, the option 4 again
Direct Mail	
United States Clients	Hyphen Solutions 1507 LBJ Freeway, suite 300 Dallas, TX 75234
Canadian Clients	Hyphen Solutions 4838 Richard Road SW, Suite 300 Calgary, AB T3E6L1

We understand that clients sometimes are unable to access our systems or need urgent assistance outside of our standard application support hours, including weekends and holidays. Therefore, Hyphen clients requiring urgent assistance after hours may call Hyphen Toll Free at 1-877-508-2547, Option 4, and leave a voicemail message. Our application support representatives will respond to the voicemail as soon as possible and depending on the severity of the issue reported.

After Hours application support should be utilized to report critical system outages only and should be sent in via email and a phone call. Please include the HomeFront Module and version being used at the time of outage. IE: Precision, Profit, HomeFront Sales, etc.

14.0 HomeFront User Group Website

We encourage all HomeFront users to join the HomeFront User Group Website. There you will find ever-expanding information and resources relating to your software as well as communication regarding the latest version releases and accompanying release notes, HomeFront and HomeFront Sales/CRM user guides.

To become a member please visit <https://usergroup.hyphensolutions.com> to register. Select the orange “log in” button in the top right-hand corner. Complete the “Register Now” section, choosing HomeFront from the drop-down menu and click submit. Hyphen Solutions will then send an email to the address entered to complete your registration and create your password.

15.0 Hyphen U

To create an account for access to training videos and User Guides contact HyphenU@Hyphensolutions.com.
